Photos reveal Ole Scheeren's Róng Museum of Art under construction in Shenzhen

Tom Ravenscroft · Dezeen Architecture

Architecture studio Büro Ole Scheeren has revealed photos and renders of the Róng Museum of Arts, which is currently under construction in Shenzhen, China.

Designed for Tenova Future – a private venture of Ma Huateng, the founder of technology company Tencent – the museum will focus on the visual culture of the 20th and 21st centuries.

It will be located alongside the Shenzhen Bay Culture Park by MAD, which will be topped by two pavilions designed to resemble stones and near a bullet-shaped skyscraper designed by KPF.

“From the very beginning, we worked closely to define a museum and overall complex that is not only a showcase, but a symbiotic urban and ecological statement with big tech as a central cultural patron,” said Büro Ole Scheeren founder Ole Scheeren.

“Around the world, most tech environments are relentlessly self-focused,” he continued.

“Here, the ambition is to chart a different path by investing in public space, cultural venues and education, and to use economic success to underwrite a deeper, more generous engagement with the city and wider society.”

Much of the structure is complete

Set to be 53 metres high, the 4,500-square-metre cultural landmark comprises five blocks that surround a central, skylight plaza.

Each of the sculptural blocks has similar forms that expand in size as they rise and are interconnected to create a sinuous mass.

The facades will be covered in hanging glass tubes

The curved facades of the museum will be wrapped in hundreds of hanging, “parametrically-engineered” glass tubes.

According to the studio, these will give the museum a distinctive identity and improve its energy performance by creating shading and helping with ventilation.

Read:

Ole Scheeren reveals plans for Shenzhen skyscrapers with “waterfall” facades

“I wanted to give the museum a distinctive and magical appearance that creates a sense of curiosity, especially amongst the younger generation,” said Scheeren.

“The whole project was conceived as a cross-cultural interactive experience, with a very focused exhibition space and

programme at its core, but with many more ways to engage with culture and architecture.”

The glass tubes will be illuminated with LEDs

Along with 2,300 square metres of gallery space, the museum will contain a major public library, workshops and spaces for lectures, along with shops, cafes and restaurants.

The building will be topped with an extensive roof garden.

A skylit plaza will be located at the centre of the building

The museum, which is set to open in 2027, forms one city block in the wider Houhai Hybrid Campus, also designed by Büro Ole Scheeren.

Each of the four blocks in the development will be connected by bridges, with office space and a hotel occupying the other buildings.

Elsewhere, Büro Ole Scheeren is also designing a skyscraper for Chinese e-commerce company JD.com with facades intended to resemble waterfalls and developing twisting office towers for the global headquarters of Tencent.

Snøhetta transforms Théâtre Nanterre-Amandiers in France into “urban lantern”

Jon Astbury · Dezeen Architecture

Architecture studio Snøhetta has completed the renovation of Théâtre Nanterre-Amandiers in France, unifying its performance spaces around a tilted glass hall that overlooks a landscaped plaza.

The theatre in the Paris suburb of Nanterre dates back to the 1965 Festival de Nanterre, when it began life as a circus tent and subsequently a temporary warehouse. The permanent building was designed in 1976 by the architect Jacques Kalisz.

Snøhetta has renovated Théâtre Nanterre-Amandiers in France

Snøhetta won a competition to update Théâtre Nanterre-Amandiers in 2018, thanks to its proposal to upgrade its existing venues, add a new 200-seat auditorium and reconfigure its public spaces with a focus on flexibility and natural light.

At the centre of the renovation is The Grand Hall, a fully-glazed, multipurpose space that overlooks a newly-created sunken courtyard and planting designed in collaboration with landscape studio Atelier Silva Landscaping.

Its tilted glass exterior overlooks a newly landscaped plaza

“The rehabilitation project is neither a rupture nor a spectacular gesture, but a careful transformation aimed at preserving the essence of the place while firmly situating it in the present day,” said Snøhetta.

“The intervention responds to the evolution of artistic practices, uses, and audience expectations, while renewing the dialogue between the theatre, the city, and the park,” it added.

“The themes of materiality and transparency run throughout the project, serving a building that is clear, legible, and strongly connected to its context.”

The renovation centres around the fully-glazed hall

The Grand Hall maintains the footprint of the theatre’s previous foyer, expanded with a new roof and sunken floor that allows access from both the upper forecourt and lower stepped plaza.

A mezzanine area above the hall’s flexible double-height spaces provides additional access into the auditoria, while a ceiling with integrated stage equipment enables the entire space to be transformed into an additional performance or meeting venue.

Snøhetta used a “deliberately restrained” palette of concrete, wood and glass for these public areas, with the intention of creating warm, robust spaces and surfaces that

would reflect the changing light through the fully-glazed walls.

Read:

Glasshouse Theatre in Queensland operates “like a finely tuned musical instrument”

“Transparency, omnipresent throughout the space, changes the perception of the building throughout the day and seasons, making the theatre’s energy visible and supporting its mission of artistic transmission and dissemination,” said the studio.

“By day, natural light animates the volumes and reveals the raw materials; by night, the hall is illuminated, transforming the theatre into an urban lantern,” it added.

Concrete, wood and glass define the public areas

Théâtre Nanterre-Amandiers’s main 800-seat auditorium has been entirely overhauled, with the creation of accessible entrances, technical upgrades and improved sightlines. Curtains allow the size of the theatre to be reduced if needed.

Two additional performance spaces include an updated flexible auditorium with mobile seating and motorised platforms, and a new 200-seat auditorium for more intimate and experimental performances with a motorised telescopic seating system.

A new 200-seat auditorium was added to the venue

“These three auditoriums, rationally organised with dressing rooms, team workspaces, and circulation areas, form a compact and legible ensemble where each space is directly accessible and fully functional,” said the studio.

Snøhetta recently won a competition to design the new Ontario Science Centre alongside Hariri Pontarini Architects, and is among a number of studios announced to be working on a new masterplan for Istanbul’s northern Beykoz district.

Information is a battlefield: 4 questions you can ask to judge the reliability of news reports and social posts about the US-Iran war

Andrea Hickerson, Dean and Professor, School of Journalism and New Media, University of Mississippi · *The Conversation* (Politics)

Staff members watch as Defense Secretary Pete Hegseth speaks during a press briefing at the Pentagon on March 2, 2026. AP Photo/Mark Schiefelbein

Historically, when the U. S. has undertaken military action against foreign governments, journalists have relied heavily on government sources and rallied “ ‘round the flag,” often uncritically sharing official narratives about U. S. involvement. This has been evident during periods of U. S. military engagements in Vietnam , Iraq and Afghanistan .

Recently, however, the Pentagon has restricted access for legacy news organizations. And on March 14, 2026, Brendan Carr, chairman of the Federal Communications Commission, replied to a social media post from President Donald Trump complaining about reporting on U. S. involvement in Iran. Carr threatened to deny license renewals to broadcasters not operating in the “public interest.”

“The People of our Country understand what is happening far better than the Fake News Media!” Trump asserted in his original Truth Social post.

This hostile relationship between journalists and a presidential administration is only part of the story about what is or isn't happening on the ground in Iran and the Middle East.

In times of conflict, information about military activity can be seen as another domain of conflict, much like air, land and sea. Countries, including Iran, have long tried to manipulate information to persuade or influence what people think outside the region.

A preprint, not yet peer-reviewed study authored by academics affiliated with the U. S. Air Force and the U. S. Air Force Academy describes increased government funding and attention to “cognitive warfare,” or efforts to influence what people think through strategic messaging.

A common call to action from advocacy and educational groups in politicized situations where misinformation weighs heavy is to teach media literacy. Conventional wisdom holds that if people only knew how to read the news and look for bias, they would understand a situation more clearly.

As a journalism scholar and educator , I agree that media literacy is valuable. But it's also time-consuming. It's impractical to complete a full training or curriculum when faced with immediate current events. As an abbreviated measure to assess the current Middle East conflict, readers can start with the premise that information is contested and an extension of the battlefield.

Key questions to ask

This assumption reframes news not as something that finds a reader by chance, but as something someone wants a reader to see. It primes readers' critical thinking.

Then readers can consider some key questions:

Why does the author of this information want me to see this?

The obvious answer is that they think it's important, but what are they focused on? Military progress? One actor in the conflict? Civilian responses? Public opinion? Diplomacy? Asking these questions helps assess what is left out and helps readers resist the temptation to extrapolate details they can't know from a single news story.

What information does this person or organization have access to?

Because Iran is inaccessible to many journalists , readers must be especially careful about reporting purporting to know or show what is going on inside Iran. For sure, information is coming out via citizen reports and social media , but it is hard to verify and interpret .

Graves dug for coffins of students killed in a bombing on a girls elementary school in Minab, Iran, are seen during a mass funeral on March 3, 2026. Stringer/Anadolu via Getty Images

Relatedly, and especially when consuming content from social media, readers can ask:

What about an author's personal experience may inform their interpretation of events?

Media produced for and by diasporas – people displaced from their country of origin by choice or force – is a good source for contextualized and expert information about conflicts in their country of origin. But diasporas can also be deeply political and strategic in what they share. As a general consumer, readers don't need to get to the bottom of the veracity of the information they share. Readers can simply be aware of diasporas' positions so they can factor this into their interpretation and understanding of the conflict.

What do different people or organizations have to gain or lose by people widely seeing specific information?

If information is a battlefield, actors will make strategic choices in what they will share with the public. Sometimes they will shield information from the public or deny information . However, undesirable and unflattering information occasionally gets out and circulated, as was the case when a missile struck an Iranian elementary school .

Politicians will want to show they are winning . Journalists may want to show they are being a watchdog on the government. Readers can consider the goals of both the authors and the sources they cite when trying to orient themselves

How hatred of Jews became a common ground for Islamic terrorists and left-wing extremists, fueling domestic terrorism

Arie Perliger, Director of Security Studies and Professor of Criminology and Justice Studies, UMass Lowell · *The Conversation (Politics)*

A woman gathers children as law enforcement responds at a Michigan synagogue after an assailant drove a vehicle into the building on March 12, 2026. AP Photo/Corey Williams

Every major escalation in the Middle East sends shock waves far beyond the region. In the United States, those shock waves arrive not as distant tremors but as catalysts for domestic radicalization and violence, particularly against Jewish communities.

The data is unambiguous.

Following the Hamas attack on Israel on Oct. 7, 2023, which led to the deaths of more than 1,200 Israelis and taking of more than 200 hostages, Israel's military responded in a campaign that intensified the following year, killing more than 70,000 Gazans.

At the same time, in 2024 the Anti-Defamation League recorded 9,354 antisemitic incidents in the U. S. – averaging more than 25 acts per day – the highest figure in the audit's 46-year history.

FBI hate-crime statistics documented 1,938 anti-Jewish offenses in 2024, constituting 69% of all religion-based hate crimes. Jews comprise roughly 2% of the population.

The Secure Community Network, which provides Jewish communities in North America security services, tracked over 10,000 threat incidents and suspicious-activity reports since Oct. 7, 2023, including more than 500 credible threats to life in 2024.

Research shows similar trends following past military escalations in the Middle East.

Geopolitical violence abroad translates, with alarming efficiency, into homegrown threats in the U. S. and Canada. For the first time in the ADL audit's history, a majority of incidents in 2024, 58%, contained elements explicitly related to Israel or Zionism. As someone who has studied domestic terrorism and hate for over 20 years, such dynamics are not surprising. They illustrate what my own research and that of others calls “imported conflict.”

The recent attacks against Jewish targets in Toronto, Michigan and possibly the one in San Jose underscore that the threat is neither abstract nor hypothetical.

On March 6, 2026, a road strewn with rubble and debris is seen after heavy Israeli strikes on Beirut's southern suburbs. AFPTV / AFP via Getty Images

Radicalization of strange bedfellows

Foreign conflict can become domestic violence via multiple pathways.

Left-wing extremists, Jihadi-inspired militants and far-right white supremacists occupy distinct spaces along the ideological spectrum, yet they converge on a shared target: Jews.

Each escalatory cycle in the Middle East energizes their exposure to and gradual adoption of extremist views. Online ecosystems accelerate the process dramatically.

Encrypted Telegram channels circulate operational guidance from jihadist media wings within hours of a Middle East strike, encouraging attacks against Jews wherever they can be found. On platforms like 4chan and Gab, white-supremacist accelerationists seize on the same events to amplify “great replacement” narratives casting Jews as orchestrators of unwanted demographic change.

Meanwhile, TikTok and Instagram accounts repackage eliminationist slogans, advocating the end of the state of Israel – “from the river to the sea,” “glory to the resistance” – as mainstream progressive content, reaching millions of young users whose algorithmic feeds reward outrage over nuance.

What once required years of indoctrination within a closed network can now unfold in weeks of passive scrolling.

On university campuses, the atmosphere has grown particularly volatile. Campus Jewish organization Hillel International documented 2,334 antisemitic incidents during the 2024–25 academic year, the highest since tracking began.

These confrontations involve physical intimidation, exclusion from student organizations and what the organization describes as the normalization of eliminationist language cloaked in social justice vocabulary.

Antisemitism as anti-racism

To understand the increasing ease with which geopolitical violence abroad turns into antisemitic violence in the U. S. requires understanding the ideological developments in recent progressive thinking.

One observation that our research demonstrates is that today's antisemitism may not come from the political fringes but from within progressive movements themselves. Much of progressive ideological frameworks tend to divide the world into oppressors and oppressed. Because Jews are often seen as white, wealthy and well connected, they can get placed on the oppressor side of that line.

Intersectionality – a concept originally designed to show how different forms of disadvantage overlap – is now regularly used to justify shutting Jews out of progressive coalitions and solidarity campaigns.

According to ADL survey data, Americans who agreed with the belief that problems in the world “come down to the oppressor vs. the oppressed” were 2.6 times more likely to hold negative or stereotypical views about Jewish people

Dublin Coddle

Melissa Nolan · Budget Bytes

If you've never heard of Dublin Coddle, let me introduce you to this thrifty gem of a recipe! It's a cozy one-pot dinner made with budget-friendly staples like bacon, sausage, potatoes, and broth, and is cooked low and slow in the oven. The sausage becomes tender and moist, the potatoes soak up the flavor-packed broth, and the bacon is the cherry on top. Dublin coddle is a seriously hearty meal that feels especially right for St. Patrick's Day, but I'll happily make it any time I want a filling dinner without spending a ton.

Dublin Coddle is a cozy Irish sausage and potato stew-like dish believed to date back to a famine in the 1700s. It's typically made with potatoes, onions, rashers (bacon), and sausage, and is prime example of making something warm and sustaining out of whatever you have on hand! And you guessed it, the meaning is in the name. This dish is "coddled" slowly and gently for hours, which means to gently cook just below boiling point.

I kept this recipe for Dublin coddle mostly traditional and just swapped out Irish sausage with beer brats because they're much easier to find here in the US. I rendered bacon, browned the sausage, then layered everything in a Dutch oven. Then I coddled everything for 2 hours, then enjoyed the results! It's humble food in the best way and that's why I love it so much!

Deglaze with broth. Instead of deglazing the pan with a dark ale or stout as some recipes call for (which can get pricey if you're not already buying it), I deglaze with chicken broth. It does the same job of lifting up all those browned bits, and you can use whatever broth you've already got! Beef or veggie broth will both work for a slightly different flavor.

Brown the sausages for more flavor. Like many recipes with lots of history behind them, there are many ways to make a Dublin coddle. Some recipes skip browning the sausage and add them directly to the pot. I personally like to brown mine first because it adds an extra layer of flavor.

There's no need to pierce the brats. It'll cause the fat and juices to leak out, which is where all the flavor is. Just brown them gently and let them finish cooking in the pot so they stay juicy.

Try different seasonings. I seasoned it with salt, pepper, dried parsley, and dried thyme to keep it classic and simple. You can also use bay leaves, rosemary, oregano, onion powder, garlic powder, or the like.

Adjust the liquid. I added only two cups of broth to my Dublin coddle recipe. If you want a more soup-like coddle, add another cup of broth to the pot.

Make this easy Dublin Coddle recipe with bacon, sausage, potatoes, and onions simmered in broth for a cozy Irish-inspired dinner!

Total Cost \$11.31 recipe / \$2.26 serving

Prep Time 15 minutes minutes

Cook Time 2 hours hours 30 minutes minutes

Total Time 2 hours hours 45 minutes minutes

Servings 5 servings (1 Brat each with veg)

Calories 577 kcal

Dutch Oven with Lid

8 oz. bacon chopped, \$2.34

5 beer brats \$4.97*

2 onions medium dice, (3 cups, 750g) \$1.45

4 garlic cloves minced (2 Tbsp) \$0.24

1½ tsp salt \$0.06

1 tsp black pepper freshly cracked, \$0.16

2 lb. gold potatoes washed, roughly peeled, and 1-2 inch cubed, (907g) \$1.79**

2 cups chicken broth 16oz., \$0.26***

1 tsp dried parsley \$0.02

½ tsp dried thyme \$0.02

Gather and prepare all ingredients. Move a rack to the bottom of the oven with enough room to fit the Dutch oven. Preheat the oven to 300°F.

On the stovetop, heat the Dutch oven over medium heat. Once hot, add the bacon and render for about 10-15 minutes, stirring occasionally, until crispy. Using a slotted spoon, remove the bacon and set it aside, leaving the grease in the pan.

Next, place the brats in the pan and sear each side for 3-4 minutes, until browned. Remove the brats from the Dutch oven and set aside.

Add the onions, garlic, salt, and pepper, and cook for about 3 minutes until the onions have softened.

Top the onions with the cut potatoes, chicken broth, dried parsley, and dried thyme. Stir to combine.

Place the brats, bacon, and any drippings on top of the potatoes and onions blend.

Lid the Dutch oven and place it in the preheated oven for 1

The 13 Best Office Pranks for Torturing Your Coworkers on April Fool's Day

Gabrielle Taylor · WonderHowTo

The best part about April Fool's Day is that everyone is fair game. Even big tech companies like Google and Twitter get in on the action every year. It encourages even the most uptight, unfunny party-poopers among us to have a little fun driving each other crazy with pranks — even at work. You might be stuck at work or in class, but that doesn't mean you have to wait until nighttime to start fooling. Here are some pranks you can pull around the office on your coworkers (or maybe even your boss ... if you're brave enough) on any day of the year. These aren't computer pranks, but good old-fashioned hands-on pranks that will either frighten, shock, or gross out your friends. Don't Miss: The Best Water Bottle Prank Ever for April Fools' Day!

Water, Lemon Juice, Vinegar, or Nothing: Should You Even Bother Rinsing Chicken?

Karen Ahn · WonderHowTo

There's an ongoing debate about whether or not it's safe or even desirable to rinse meat before cooking it. Many fall into the anti-rinsing camp, saying that it's not effective at dislodging bacteria, especially on poultry, as we've discussed before. Meanwhile, some argue that rinsing certain meats, like bacon, can rinse away excess surface salt and may reduce shrinkage — though evidence is strictly anecdotal. Washing meat with a gentle acid: a cultural practice, not a safety guarantee In many West Indian and Caribbean kitchens, it's a common practice to rinse chicken and fish with a mild acid like lemon, lime, or vinegar prior to cooking. For example, Haitian stewed chicken (poule en sauce) is prepared by washing the chicken with sour orange juice or vinegar before cooking.

Cooks say it freshens the smell, removes surface slime, and adds subtle tang. Before modern refrigerators, a quick acidic rinse was thought to keep spoilage at bay when birds hung at room temperature. Today ...more

DIY Olaf Costumes: Low-Cost Halloween Looks for Frozen's Silly Snowman

Osas Obaiza · WonderHowTo

With a November 2013 release, Disney's Frozen just missed Halloween. That means that everyone had to wait an entire year to dress up as their favorite princess or snowman — and that time has finally come. One costume that's sure to be a hit is Olaf, childhood snowman of Princess Anna and Elsa brought to life. Best of all, since he can survive in the summer, you don't need to worry about a snowy Halloween to make this costume feel legit — he works all year round. If you don't want to spend \$200+ on a super-detailed Olaf adult costume or even \$40+ on a children's costume, then it's time to DIY one. Below are a few easy video tutorials on making your own, with different variations of the popular Disney snowman. Olaf Costume #1: Super Simple (Unisex)Eva, from MyLifeAsEva, designed her own Olaf costume that's really simple to recreate.

It makes for a great group outing alongside other Frozen characters like Anna and Elsa. Best of all, it'll cost you less than \$15. The total cost for all of ...more

How to Make Perfect Mashed Potatoes on Thanksgiving

Yumi Sakugawa · WonderHowTo

Unlike your more artistically-minded friends who've been working on their homemade, hand-stitched, conceptually-brilliant Halloween costumes since May, you need to put together a last-minute costume in a matter of hours. What can you possibly do if you're cheap, kind of lazy, and don't know how to sew to save your life? Invade your first-aid kit and roll yourself into a gauze mummy. Or, if you happen to have a big cardboard box and a roll of duct tape lying around, turn yourself into a vintage robot. Next to a thrift store? Buy yourself some vintage duds to dress as an old-timey ghost, or nab that XXL plain white T-shirt for a few bucks to make your ridiculously easy sunny-side-up egg costume. Have a lot of black in your wardrobe?

Visit your nearest Halloween or dollar store and buy a burglar mask to complete your all-black bank robber ensemble. Don't Miss: 10 More Truly Last-Minute Halloween Costume Ideas for the Cheap & Lazy If you're absolutely short on time, nothing says ...more

How to Make Bread Crumbs

Kathryne Taylor · Cookie and Kate

These tiny homemade bread crumbs can make a big impact on your meal! They're the perfect crisp finishing touch on casseroles, salads and more. Follow this recipe to make regular golden bread crumbs, or add the optional seasonings and your kitchen will smell like the best Italian restaurant.

This simple recipe is far more flavorful than store-bought options, and keeps well for months. Use your bread of choice, whether it's your favorite crusty sourdough or whole wheat sandwich bread. If you have leftover bread that's turning stale, turn it into bread crumbs to save it for later (or croutons or French toast)!

deb · Smitten Kitchen

From choosing the right potato to the movement at which you mash your cut and boiled spuds, making the perfect mashed potatoes requires more attention to detail than you might think. First things first — choose the right potato based on your personal preference for whether you like your mashed potatoes creamy or fluffy. You can't go wrong with making mashed potatoes out of a combination of Russet and Yukon gold. When you're boiling your potatoes, make sure they are cut and peeled, and placed in a pot of cold water. Once the potatoes are soft to the point of no resistance when poked with a knife, it's important to drain the potatoes and heat them over low heat until they're hot and dry. Mash the potatoes with an up-and-down movement with a masher, and mix in heated butter and heated milk or cream.

For extra fluffiness, add a pinch of baking soda. It's important that the extra ingredients you're mixing in with the hot and dry potatoes are also heated or melted. Don't Miss: 17 Delicious ...more

This Thanksgiving, You Can Have Your Booze & Eat It, Too

Nick & Bay Nigro · WonderHowTo

To some people, Thanksgiving is merely quality time with family and friends that they can't get throughout the rest of the year. To others, it's that one time when it's okay to be a greedy hog and get hammered all weekend long. In that spirit of eat-and-drink-until-you-drop, we've found some of the best Thanksgiving Day recipes that combine your favorite traditional dishes with your alcohol of choice. We're talking appetizers, main dishes, and desserts with wine, hard cider, vodka, and more — there's something for everyone! These, of course, will be no substitution for all that wine and beer you'll be drinking throughout your holiday break, so make sure to stock up accordingly. 1. Cheddar & Hard Cider FondueFondue is one of the most amazing things in the entire culinary world — especially when it comes to seasonal fondue.

Make the Food Network's version of cheddar and hard cider fondue and literally dip everything you can in it before it gets eaten up: sausages, bread, vegetables, ...more

If You've Run Out of Shaving Cream, Give These 10 Household Items a Try

Heather Fishel · WonderHowTo

How do you cook when your kitchen isn't available for kitchen-ing? On a Sunday last April, I awoke at the crack of dawn jet-lagged from an (excellent) trip to Amsterdam* to an email from my apartment building that ConEd had found a gas leak in the main line to the building and had shut down service for safety. With this, I was indoctrinated into a society of New Yorkers I previously hadn't known existed, as NYC is apparently riddled with tales of people who lived without gas for (what seemed like the minimum of) 6 months and up to 18 months while their building trudged at a snail's pace through rounds of repairs and inspections.

Running out of any shower necessity is just a temporary annoyance, but it always seems worse when it's an empty can of shaving cream or gel. Sure, you could dry shave or use whatever liquid toiletry item is in hands reach, but if you want a truly smooth shave without irritation, you'll want to try one of the following alternatives. Some of them might even work better than your can of Barbasol or Skintimate. Don't Miss: Save Money on Replacement Razor Blades Cartridges! Next time around, try signing up for a subscription like Dollar Shave Club to make sure you always have fresh razors and shaving cream around. 1. Baby OilBaby oil (which is just pure mineral oil) allows you to see your skin better while you shave, reducing the chances of nicks, cuts, razor bumps, and other skin irritations.

Additionally, its slick nature helps razors work smoothly. Just make sure to use only a few drops. If you overdo it, your razor might get all gunked up. Wendy/xoVainYou can also rely on other types of ...more

ANALYSIS

Get Out absolutely tore up the record books this year. And the wildest thing about it? It did so with the most ordinary looking characters and props ever (hence the shoestring \$4.5 million budget). Which makes it a godsend for the time- and cash-strapped come Halloween. Get Out/Universal Pictures With Get Out, Jordan Peele is the first (and only) African-American writer-director with a \$100-million film debut under his belt. The film is also the _all-time highest domestic grossing debut based on an original screenplay (it beat out The Blair Witch Project by a good \$30 million). So you can bet that everyone at your Halloween party is going to recognize you in a Get Out getup.

Especially if you get a bunch of friends together and you all dress up as characters from the film — which is pretty easy because everyone in it is just wearing regular clothes. Lucky for you, we've sifted through the film, picked out the clothes all the major characters wear, and even pointed out where you can ...more

AIA sues Donald Trump over Kennedy Center renovation in unprecedented coalition

Ben Dreith · Dezeen Architecture

US organisations the American Institute of Architects and Docomomo US are among the plaintiffs in a lawsuit suing US president Donald Trump over his proposed renovations for the Edward Durell Stone-designed Kennedy Center.

Eight plaintiffs submitted a lawsuit this morning in an attempt to pause proposed renovations to the John F Kennedy Center for the Performing Arts in Washington DC.

The plaintiffs include the American Institute of Architects (AIA), Docomomo US, the Cultural Landscape Foundation, the American Society of Landscape Architects, the Committee of 100 on the Federal City, DC Preservation League, the National Trust for Historic Preservation and the Society of Architectural Historians.

Unprecedented coalition of preservationists

According to the group of plaintiffs, the lawsuit represents one of the largest legal coalitions of preservation bodies in history.

“No plaintiff can remember an instance in which so many national and regional organisations have coalesced to defend a single historic building and its grounds, reflecting both the Kennedy Center’s significance and the breadth of concern that the administration’s approach could weaken longstanding federal protections for historic sites nationwide,” said the plaintiffs.

Named as defendants in the lawsuit are president Donald Trump in his capacity as chair of the Board of Trustees of the Kennedy Centre, the Smithsonian Institute, the National Capital Planning Commission, as well as other government organisations and officials.

“It’s not about the president’s tastes. It’s about the rule of law”

The lawsuit contends that the administration must adhere to the processes in the National Historic Preservation Act and the National Environmental Protection Act before proceeding with planned renovations to the centre.

Given this, the plaintiffs demand that proper review and authorisations by congressional officials should precede any renovations. The lawsuit, if successful, would halt work on the structure until such authorisations and associated public reviews are completed.

Read:

Corinthian columns proposed for White House to match ballroom extension

“The Trump administration appears to believe that they can skip those federal requirements and go right to alterations,”

attorney and co-founder of Cultural Heritage Partners Greg Werkheiser told Dezeen.

Cultural Heritage Partners is one of the law firms representing the plaintiffs, along with Foley Hoag and Lowell & Associates, all of which have open cases against the administration relating to other preservation issues, such as the Eisenhower Executive Office Building, the East Wing expansion, and the East Potomac Golf Links.

“Each of these cases is not about the politics,” said Werkheiser. “It’s not about the president’s tastes, whether good or bad. It’s about the rule of law and doing what Congress intended.”

“I’m not ripping it down,” says Trump

Last week, the board voted to close the centre for years for renovations after voting to add Trump’s name to the centre, which was built in 1971.

On 13 March, president Trump released renderings on his Truth Social account, showing a building structurally akin to the current modernist building. In the post, the president said that the steel and some of the existing marble of the building would be maintained, saying, “I’m not ripping it down.”

Werkheiser said that the case is informed by the contradiction between the assurances given by the president about the East Wing and the reality of its demolition last fall.

“The hardest lesson for America to learn is that we cannot take for granted assurances from the White House,” he said. “For the East Wing matter, the President himself told the American public that to build the ballroom, the East Wing would not be touched, and then days later, it was gone.”

“So the lesson we’ve learned is timeliness and not to take those assurances for granted,” he continued.

How Donald Trump is using architecture to reshape Washington DC

Almost all the plaintiffs cited the historical significance of the building and the need for care and procedure in issues of its renovation.

“Architects have the core responsibility of protecting the health, safety, and welfare of the public and that includes the integrity of our nation’s civic and cultural landmarks,” said AIA president Illya Azaroff.

“The Kennedy Center is a public asset that must be shaped through transparency, expertise, and the communities it serves.”

In a statement to Dezeen, a White House spokesperson said that the administration is looking forward to “ultimate victory” in the dispute.

Trump plans to redesign D.C.'s public golf course on top of East Wing rubble

Hunter Schwarz · Fast Company Design

The remains of the East Wing of the White House could one day be buried under a golf course designed by the president who ordered its demolition in the first place.

As President Donald Trump seeks to physically remake the U. S. capital city to an extent never before seen in the modern presidency, the rubble from the construction site of one of his most visible projects has been trucked to the site of one of the least: a public golf course that sits on a stretch of land in the middle of the Potomac River between Washington, D. C., and Virginia.

The East Potomac Park Golf Links at Hains Point, currently open to the public, is one of three Washington, D. C., golf courses overseen by the National Park Service that Trump hopes to remodel. But in the meantime, it's become a dumping ground: Construction workers have been disposing of dirt and rubble from the demolished East Wing there since Trump ordered its teardown last fall. The debris can then be used to fill in the golf course above the flood plain, as recommended by Interior Secretary Doug Burgum, per *The Wall Street Journal* . It also serves as a fitting metaphor for Trump's D. C. redesign ambitions.

Golfers play the fifth hole as trucks unload debris and soil from the demolition of the White House's East Wing at East Potomac Golf Course on October 24, 2025, in Washington, D. C. [Photo: Tasos Katopodis/Getty Images]

Trump's effort to replace the site of the East Wing with an oversize ballroom and to install an arch two and a half times taller than the Lincoln Monument outside Arlington National Cemetery are his largest proposed D. C. redesign projects, while the placement of his name on building facades and his likeness on currency and banners in D. C. are perhaps his most vain. The golf course, however, might be the closest to his heart.

In his first year back in office, Trump made 106 visits to one of his golf properties . And in *The Art of the Comeback* , his 1997 ghostwritten memoir published following a string of bankruptcies in the '90s, he listed "Play Golf" as his top comeback tip because it helped him relax, concentrate, take his mind off his problems, and make money.

"I only thought about putting the ball in the hole," he wrote. "And, the irony is, I made lots of money on the golf course—making contacts and deals and coming up with ideas."

Golf course designer Tom Fazio, who has designed Trump-owned courses in the past, is now reportedly overseeing the East Potomac redesign after having toured the course last November under an alias, according to *Golf Digest* . The magazine also reported that some in Trump's orbit see the Langston Golf Course, a municipal course near the future site of the new Washington Commanders football stadium, as a prime site for commercial and retail development.

The reported plan is to rename East Potomac Park "Washington National," giving the course the naming convention of Trump properties like the Trump National Golf Clubs located in Potomac Falls, Virginia, and in Rancho Palos Verdes, California, respectively. (It also sounds like the name of D. C.'s Major League Baseball team.) Work is expected to break ground in July on an 18-hole championship-level course that could host tournaments.

For now, East Potomac remains open seven days a week, and players can hit the course (up to 18 holes) for less than \$50 or practice on the driving range from 8 a.m. to 8 p.m. every day but Wednesday (when it opens at 11 a.m.). No word on how much a redesigned course would cost under Trump, but a source told *Golf Digest* that locals could get a discount.

If Trump's White House redesign aim is to turn the People's House into Florida Man's McMansion , his plans for a proposed golf course suggest a wider ambition to make D. C. into a Trump-branded compound—and to give public lands the look and feel of a Trump property, too.

Losing Connie

Jodi Ettenberg · Legal Nomads

Earlier in May 2024, the spinal CSF leak community lost a bright light when Connie Rim passed away. Her Facebook page, called My CSF Leak Story, was where she detailed her long fight trying to get sealed and healed. A few days after she passed, her husband posted words from Connie about her death, sharing it with the world.

Connie sustained her leak 5 years ago during spinal surgery, and tirelessly rallied her body and mind in her attempts to get care and find her way back to a place of less pain. Like me, she found solace in sharing this journey publicly. In her case, via videos that she posted to Facebook and TikTok, detailing her many debilitating symptoms, explaining the procedures and tests she got, and patiently answering questions.

When someone is chronically ill and takes a break from treatments, there is inevitably a swell of people asking why. “Why aren’t you doing more?”, as if it’s up to you to not be better. As if there’s full control of the long tightrope you need to walk on when you’re dealing with multiple complex conditions. Despite her openness and raw, unflinching videos, people still asked Connie this question.

Perhaps in response to this, or for other reasons (I don’t know), in May 2023 Connie posted a long list of procedures and tests and doctors she’s seen right before she headed out to Mayo for more leak diagnostics and procedures: “This cannot be my life. This is not a life. I’ve been fighting to get better and advocating for myself as much as possible but in truth, I’m tired now. Nothing is as easy as it once was,” she wrote then.

By this point, she had been to leak specialists and still her leak(s) were not sealed. She was in constant pain. She reposted that list, updated, a few days before her death.

She did get treatment after that May 2023 post, one that brought her pain down a little bit. We could all feel her joy and hope when it did. But that treatment failed, and when it failed it brought a new, terrible set of symptoms. Since late January 2024, she experienced severe stabbing pain from three to over twenty times daily, at what she classified as a level 10 pain. To be in pain all day, and then layer upon that a new and persistent, paralyzing pain... I can’t imagine.

By mid-May, she was gone.

Reading between the lines of the message her husband posted, she hit a wall where the excruciating pain she experienced moment to moment couldn’t be managed.

“Some days, I’ve been given 10-15 minutes of my precious baseline pain, and for that. I’m grateful. But during the remaining 23 hours and 45 minutes, I was always crying, fighting, and, at times, in so much pain that I could do anything but curl in a fetal position in darkness,” she wrote.

Her family and husband were loving and kind, she had a lot of support, and she had a community who rallied around her. I understand that those amazing things may not be enough when you are trapped in a body that tortures you.

Studies show that in a chronic state, pain can disrupt the communications between brain cells, leading to a reduction in the ability to process emotions — especially negative emotions. Pain changes your brain. I experienced a version of this myself not long after my leak began: already in chronic pain for years but not yet aware of mast cell diseases, I ate a particularly high histamine meal of spaghetti and shared a glass of wine with my family. It was this meal during those initial leak days, before I went to Duke for treatment, that tipped my body into its new, unruly state. After that meal, I had full-body burning and nerve pain 24/7. And it didn’t go away. It felt like I was being dipped in acid, with no respite from the torture.

It was a fellow patient who urged me to think about MCAS, given my symptoms. I hadn’t heard of mast cell activation syndrome before. With no doctors to support me, I scrambled to get my mast cells under control and try to make it stop. During those weeks of absolute hell, until I found over-the-counter medications that worked for me, I begged a close friend to help me find a way out forever. (They declined, were compassionate throughout, and instead tried to find me a grief therapist locally. What helped in this case wasn’t therapy, it was finding respite from the fire-burn all over my body thanks to antihistamines and a low-histamine diet.)

And that was how I felt with only a few weeks of torture.

Connie lived with that pain that for many years. As she said in her writing, “The pain determines my emotions, NOT the other way around (as some people believe).”

Her passing hit the leak world very hard. Even those who did not know Connie personally often watched her videos on TikTok or Facebook, or interacted with her on the groups. In my case, I was virtual friends with her for years and we exchanged audio messages about strategies, told jokes, tried to keep ourselves sane in this Groundhog Day world we lived in when staying sealed felt like a pipe dream.

And yet, despite the pain and the exhaustion and the procedures, Connie remained joyful where she could, she appreciated what love she had in her life, especially her deep and beautiful love for her husband, and saw humour where she was able. She had tons of support. The pain determined her emotions, as she said. She was a prisoner of her constant agony.

I feel angry for her and her family, and for all of us. In looking at that long procedures list, it feels like she was failed so many times along the way. Even as recently as this year, she presented to the ER and later shared a video explaining that the on call doctor said her symptoms were psychosomatic. How can you look at that blisteringly long list of treatments and think it’s psychosomatic?! The ongoing nerve damage

PichiAvo builds wooden temple to burn down for Valencia's Fallas festival

Amy Peacock · Dezeen Architecture

Local art studio PichiAvo used wood and paper to create a pavilion based on an Ancient Greek temple, which was set ablaze for the Fallas celebrations in Valencia .

Named Per Ofrenar, which means “to offer” in Catalan, the installation had a classical design that drew upon the Temple of Athena Nike in Athens .

PichiAvo designed a temple-like pavilion to be burnt as part of Fallas festival

PichiAvo designed Per Ofrenar for Fallas, an annual five-day festival where wood and paper monuments are exhibited in the streets of Valencia before being set on fire on the final day, La Cremà, which was on 19 March.

Installed on a street in the centre of the city, its walls, roof and plinth were constructed from wood, while surplus paper from a book by PichiAvo was used for the capitals and bases of the pavilion's Ionic columns.

Inside, two candles were placed atop stacks of PichiAvo's surplus paper, which was arranged to form an altar-like space.

Fallas monuments often have sculptural designs that take the shape of satirical figures, but PichiAvo wanted to design a place for people to gather and leave religious offerings.

Read:

“Per Ofrenar means ‘to offer’, in the sense of mak-

ing a symbolic, spiritual, or religious offering,” PichiAvo founders Juan Antonio Sánchez and Álvaro Hernández told Dezeen.

“We wanted to create a space specifically designed for that act, a place people could physically enter and leave an offering to the deities.”

Graffiti was written on the walls of the temple during the festival

“The temple naturally became the most suitable structure to represent this space within our visual language,” the duo continued. “It carries a strong symbolic meaning as a place of gathering, ritual, and connection between humans and the divine.”

“As we see it, the temple is not just a form, it's a space for action, for ritual, and in this project, it becomes a place where our visual language and the tradition of offering come together.”

It was set on fire on La Cremà, the final day of the Fallas celebrations

Towards the end of the five-day festival, before being set on fire, visitors wrote their wishes and reflections in graffiti on the walls of the temple.

Other wooden pavilions that have recently featured on Dezeen include a pod-like forest structure with openable facades and a collection of timber installations built on the grounds of the 1969 Woodstock festival .

The Big Dune

Stu Davidson · Stuck in Customs

Daily Photo – The Big Dune

I got one of those Google reminders today of an image from the past and it sent me down a little rabbit hole on my Smugmug portfolio. One of the little branches ended up at this image which quite connected with me today for some reason, so I thought I'd share. Maybe it's because it is the middle of winter where I am... who knows. Whatever the case, I hope it gives you a little bit of joy in your day too.

Over 40,000 civilian buildings in Iran reportedly damaged in ongoing war

Amy Peacock · Dezeen Architecture

Humanitarian group Iranian Red Crescent Society has reported that 42,914 civilian buildings in Iran have been damaged by US-Israeli airstrikes, including more than 36,000 homes.

Announced on X last week, the Iranian Red Crescent Society – a non-governmental group affiliated with the International Federation of Red Cross and Red Crescent Societies (IFRC) – calculated that US-Israeli airstrikes have caused damage to 42,914 civilian buildings in Iran.

This includes 36,489 residential units and 6,179 commercial units.

A number of cultural heritage sites have been damaged in Iran by US-Israeli airstrikes since the recent war broke out. Last week, the Iranian government announced on X that “at least 56 museums, historical monuments, and cultural sites have sustained serious damage”.

Among them is the UNESCO World Heritage-listed Golestan Palace in Tehran, which is thought to have been damaged by shock waves and debris from a nearby missile strike.

Historic buildings in Isfahan have sustained damage, including the Chehel Sotoon Palace, the Ali Qapu Palace and the Jameh Mosque. In Khorramabad, buildings situated near the buffer zone of the prehistoric Khorramabad Valley have been damaged, as well as the Falak-ol-Aflak Castle.

Read:

US-Israeli airstrike damages UNESCO-listed palace in Tehran

Iranian strikes have also caused damage to notable buildings across the Middle East. In Dubai, debris from an intercepted Iranian drone caused a fire at the Burj Al Arab skyscraper, and an intercepted missile caused a fire on the man-made Palm Jumeirah island.

Strikes in the Middle East have also reportedly caused damage to the White City of Tel-Aviv in Israel and Tyre in Lebanon, which are UNESCO-listed sites.

“UNESCO has communicated and will continue to communicate to all parties concerned the geographical coordinates of sites on the World Heritage List, the national Tentative Lists, as well as those under Enhanced Protection, to take all feasible precautions to avoid damage,” said UNESCO.

The current wave of strikes and counterstrikes began on February 28, when the USA and Israel launched airstrikes on Iran, killing Iranian supreme leader Ali Khamenei. Iran retaliated with missile and drone strikes on Israeli and US-allied countries and bases across the Middle East, and the war in the region is ongoing.

The photo is by the Iranian Red Crescent Society.

How to Fold an Origami Camera Using Nothing but a Dollar Bill

Reform Ed · WonderHowTo

Cameras can be pretty pricey, but this one only costs a buck, though it's pretty limited in its functionality. That's because it's no ordinary camera, but an origami one made using nothing but a dollar bill. Of course, you don't need to spend a Washington to fold this origami camera, but you'll need a similar-sized rectangular piece of paper to get the job done. We think you should stick to the moneygami aspect though, because everything's better when it's made out of money. Below, in three different parts, you can see the folding of the camera, which was designed by origami master Won Park. You can print out the step-by-step instructions using PDF template, which you'll need anyway to help guide you through the videos ...more

12 Hilarious Emblem Designs for Call of Duty: Black Ops 2 (And How to Make Them)

Osas Obaiza · WonderHowTo

Does executing a perfectly timed, no-scoped headshot, followed by a well-choreographed teabagging ever get old? No, no it doesn't, and neither do custom emblems for Call of Duty: Black Ops 2. How else are we going to kill time until Black Ops 3 arrives? I've already covered many, many, many different emblem designs, but there are always more. Some are superheroes, comic book characters, or even Christmas-themed, and then some are just plain hilarious. Here's a compilation of some of some of my favorite, most funniest COD: Black Ops 2 emblems out there, for either Xbox 360, PlayStation 3, or PC. Just follow along in the Emblem Editor to make your own. 1. Rage Quit EmblemAs a moderately skilled COD player, this particular emblem hits close to home—and I have the shoebox full of destroyed PS3 controllers to prove it.

The rage quit is a classic sign of weakness and poor play, which makes this emblem all the better. 2. No Balls EmblemNeed I say more? 3. Towelie EmblemTowelie is one of ...more

How to Roll Sushi — The Ultimate Guide

Kris Wu · WonderHowTo

Sushi rolls, known as makizushi in Japanese, are only limited by your imagination — and your ability to roll them neatly, of course. While it may seem like a lot of effort, rolling sushi is a snap if you have the right tools. If you plan on making sushi rolls a lot at home, a bamboo mat is the way to go, but a tea towel — or even just your bare hands — will work if you only want to make them occasionally. No matter which tool you end up using, the method for rolling sushi is the same. Using a traditional bamboo matFor this demonstration, I'm making kimbap, a Korean roll that contains tamago, spinach, burdock root, and pickled daikon radish. Lay out your bamboo mat with an optional piece of plastic wrap on top (to keep the mat clean). Make sure that the dried seaweed (nori) has its rough side facing upward.

(If you're feeling adventurous, you could also use a sheet of sriracha sauce instead of nori.) Evenly spread rice over the nori while leaving space at the top and bottom of the ...more
