Jason Statham's Punisher-Like Hit & More Included in This Week's Hulu Releases

Sibanee Gogoi · ComingSoon.net

Photo Credit: Amazon MGM Studios

Hulu's new TV and movie releases for this week (March 30 – April 5, 2026) include Jason Statham's intense, Punisher-like movie.

Premiering on April 1, 2026, *The Beekeeper* arrives on Hulu. It stars Statham as Adam Clay, a retired operative turned vigilante. Phylicia Rashad stars as Eloise, the kind landlady whose tragic death sets off Clay's brutal quest for justice. Directed by David Ayer, this action-thriller follows Clay's deadly mission to take down the crime syndicate responsible.

Meanwhile, romance enthusiasts can catch the classic 2004 rom-com, *50 First Dates*, also landing on Hulu on the same date. It follows the story of Henry (Adam Sandler), a Hawaiian veterinarian, who falls for Lucy (Drew Barrymore), who suffers from short-term memory loss. She forgets him every night, so he woos her anew each day. Henry makes a video diary for Lucy to explain their love story, and they eventually build a life together, documenting everything so she can re-learn it each day.

This week's new Hulu releases from March 30-April 5

Hulu has some exciting new releases for this week (March 30 – April 5, 2026) with something for everyone:

Monday, March 30

Yu-Gi-Oh! Go Rush!!!: Season 1B

Tuesday, March 31

If It's Tuesday, It's Murder: Complete Season 1 (DUBBED & SUBBED)

Meekah: Complete Season 2

Blippi's Big Dino Adventure (2023)

Blippi's Out of This World Space Adventure (2023)

House on Eden (2025)

Jesus Revolution (2023)

The Best Christmas Pageant Ever (2024)

About My Father (2023)

Wednesday, April 1

Dear Killer Nannies: Complete Season 1

Atomic S1: Complete Season 1

Fire Force: Complete Season 3 Pt. 2 (DUBBED)

Jack & Bobby: Complete Season 1

Matthew Beem Creator Essentials: Complete Season 1

Topper Guild Creator Essentials: Complete Season 1

That's Amazing Creator Essentials: Complete Season 1

Secrets of the Bees: Complete Limited Series

The Beekeeper (2024)

Big Daddy (1999)

Romy And Michele's High School Reunion (1997)

Shark Tale (2004)

Shrek (2001)

5 Lightroom Keyboard Shortcuts Everyone Should Know

Andrew S. Gibson · Digital Photography School

The post 5 Lightroom Keyboard Shortcuts Everyone Should Know appeared first on Digital Photography School . It was authored by Andrew S. Gibson .

Lightroom is a fantastic program that's designed for fast and efficient editing, but if you make all your adjustments using your mouse, you may notice that each little operation starts to add up – until you've spent hours upon hours moving your cursor, clicking the mouse, and more.

Fortunately, Adobe built in plenty of handy Lightroom keyboard shortcuts, all of which aim to make life easier for photographers and photo editors. Below, I share a few of the most critical shortcuts, which will allow you to speed up your workflow, improve your editing efficiency, and even access hidden features.

Ready to become a Lightroom shortcut expert? Then let's dive right in, starting with:

1. Reveal all shortcuts

Lightroom offers dozens of shortcuts, many of which are difficult to remember – especially if you don't use them often.

Fortunately, you can always tap Ctrl/Cmd+/, and a list will pop up that displays all of the shortcuts available in the current module. Therefore, if you're working in the Library module, this shortcut will reveal the Library module shortcuts:

And if you're working in the Develop module, this shortcut will reveal the Develop module shortcuts:

(Once you're done with this article, I highly recommend you head into Lightroom and read through the shortcuts available for both the Library and Develop modules. You're practically guaranteed to learn something new!)

When you've finished checking out your shortcut options, click anywhere on the list to hide it.

2. Tap "R" to access the crop function

This shortcut is a simple one, but it's a big timesaver. Whenever you need to crop an image, simply head into the Develop module, then hit the R key. The crop overlay will immediately appear:

And you can get to work cropping your file!

Additionally, if you don't like the direction of the crop overlay, just tap X, then watch as it's rotated:

This can be especially useful if you're trying to crop a portrait image with a landscape aspect ratio and vice versa

because Lightroom automatically creates crop overlays that match the orientation of the image file.

3. Use the "/" key to resample the image

Lightroom has several healing modes, all of which can be accessed with the Q key. Each of these modes approaches the healing process – which replaces content from the image by sampling content from elsewhere in the image – differently.

The wonderful thing about the Lightroom Healing tool is that it's quite good at guessing which part of the image it should sample to create a natural-looking result. It's a great way to correct dust spots, unwanted facial blemishes, and distracting dirt or rocks on the ground around your subject.

However, despite the Healing tool's impressive capabilities, it doesn't do a perfect sampling job all the time. That's where this shortcut comes in handy!

4.

Andrew S. Gibson

Start by selecting one of the healing modes and clicking on your image. If you don't like the sampling choice, just press the / key, and Lightroom will choose a different area of the image to sample. You can repeat this as often as you like until you get a satisfactory result!

For this next (zoomed-in) image, I wanted to get rid of this distracting dark blob in the background:

However, Lightroom's first guess didn't really work:

I hit the shortcut key, Lightroom resampled the image, and the result was much better:

Pro tip: If you keep resampling the image and you can't do any successful healing, you can always sample the file manually by using your cursor (though this does take longer than using the shortcut).

4. Use the "Shift" key to set the white and black points

RAW files often appear a bit flat, and an easy way to add some pop is by carefully setting a white and a black point – that is, by adjusting the Whites slider until the brightest tones stretch to the right side of the histogram, and by adjusting the Blacks slider until the darkest tones stretch to the left side of the histogram.

The process of setting the white and black point can be arduous – unless you know a handy little shortcut!

Normally, if you double-click on the Whites and Blacks sliders in the Basic panel, Lightroom resets them to zero. But if you hold Shift while double-click on these sliders, Lightroom calculates where to position both sliders so that the image is properly exposed. Lightroom offers an array of local adjustment tools, including the Brush, the Radial Gradient (formerly known as the

A one-line Kubernetes fix that saved 600 hours a year

Braxton Schafer · Cloudflare Blog

Every time we restarted Atlantis, the tool we use to plan and apply Terraform changes, we'd be stuck for 30 minutes waiting for it to come back up. No plans, no applies, no infrastructure changes for any repository managed by Atlantis. With roughly 100 restarts a month for credential rotations and onboarding, that added up to over 50 hours of blocked engineering time every month, and paged the on-call engineer every time.

This was ultimately caused by a safe default in Kubernetes that had silently become a bottleneck as the persistent volume used by Atlantis grew to millions of files. Here's how we tracked it down and fixed it with a one-line change.

Mysteriously slow restarts

We manage dozens of Terraform projects with GitLab merge requests (MRs) using Atlantis, which handles planning and applying. It enforces locking to ensure that only one MR can modify a project at a time.

It runs on Kubernetes as a singleton StatefulSet and relies on a Kubernetes PersistentVolume (PV) to keep track of repository state on disk. Whenever a Terraform project needs to be onboarded or offboarded, or credentials used by Terraform are updated, we have to restart Atlantis to pick up those changes — a process that can take 30 minutes.

The slow restart was apparent when we recently ran out of inodes on the persistent storage used by Atlantis, forcing us to restart it to resize the volume. Inodes are consumed by each file and directory entry on disk, and the number available to a filesystem is determined by parameters passed when creating it. The Ceph persistent storage implementation provided by our Kubernetes platform does not expose a way to pass flags to mkfs, so we're at the mercy of default values: growing the filesystem is the only way to grow available inodes, and restarting a PV requires a pod restart.

We talked about extending the alert window, but that would just mask the problem and delay our response to actual issues. Instead, we decided to investigate exactly why it was taking so long.

Bad behavior

When we were asked to do a rolling restart of Atlantis to pick up a change to the secrets it uses, we would run `kubectl rollout restart statefulset atlantis`, which would gracefully terminate the existing Atlantis pod before spinning up a new one. The new pod would appear almost immediately, but looking at it would show:

```
$ kubectl get pod atlantis-0 atlantis-0 0/1 Init:0/1 0 30m
```

...so what gives? Naturally, the first thing to check would be events for that pod. It's waiting around for an init container to run, so maybe the pod events would illuminate why?

```
$ kubectl events --for=pod/atlantis-0 LAST SEEN TYPE REASON OBJECT MESSAGE 30m Normal Killing Pod/atlantis-0 Stopping container atlantis-server 30m Normal Scheduled Pod/atlantis-0 Successfully assigned atlantis/atlantis-0 to 36com1167.cfops.net 22s Normal Pulling Pod/atlantis-0 Pulling image "oci.example.com/git-sync/master:v4.1.0" 22s Normal Pulled Pod/atlantis-0 Successfully pulled image "oci.example.com/git-sync/master:v4.1.0" in 632ms (632ms including waiting). Image size: 58518579 bytes.
```

That looks almost normal... but what's taking so long between scheduling the pod and actually starting to pull the image for the init container? Unfortunately that was all the data we had to go on from Kubernetes itself. But surely there had to be something more that can tell us why it's taking so long to actually start running the pod.

Going deeper

The missing piece The lowest-level logs we had on the pod didn't show us what's going on.

Braxton Schafer

In Kubernetes, a component called kubelet that runs on each node is responsible for coordinating pod creation, mounting persistent volumes, and many other things. From my time on our Kubernetes team, I know that kubelet runs as a systemd service and so its logs should be available to us in Kibana. Since the pod has been scheduled, we know the host name we're interested in, and the log messages from kubelet include the associated object, so we could filter for atlantis to narrow down the log messages to anything we found interesting.

We were able to observe the Atlantis PV being mounted shortly after the pod was scheduled. We also observed all the secret volumes mount without issue. However, there was still a big unexplained gap in the logs. We saw:

```
[operation_generator.go:664] "MountVolume. Mount-Device succeeded for volume \"pvc-94b75052-8d70-4c67-993a-9238613f3b99\" (Unique-Name: \"kubernetes.io/csi/rook-ceph-nvme.rbd.csi.ceph.com^0001-000e-rook-ceph-nvme-00000000000000002-a6163184-670f-422b-a135-a1246dba4695\") pod \"atlantis-0\" (UID: \"83089f13-2d9b-46ed-a4d3-cba885f9f48a\") device mount path \"/state/var/lib/kubelet/plugins/kubernetes.io/csi/rook-ceph-nvme.rbd.csi.ceph.com/d42dc508f87fa241a49c4f589c03globalmount\" pod="atlantis/atlantis-0"
```

```
[pod_workers.go:1298] "Error syncing pod, skipping" err="unmounted volumes=[atlantis-storage], unattached volumes=[], failed to process volumes=[]: context deadline exceeded" pod="atlantis/atlantis-0" podUID="83089f13-2d9b-46ed-a4d3-cba885f9f48a"
```

```
[util.go:30] "No sandbox for pod can be found. Need to start" pod="atlantis/atlantis-0"
```

SO-IL uses pink concrete to give Brooklyn apartment block “civic presence”

Ben Dreith · Dezeen Architecture

Architecture studio SO-IL utilised precast, coloured-concrete panels in various sizes to give the 144 Vanderbilt apartment block in Brooklyn, USA, a distinct identity.

The latest of SO-IL’s collaborations with design-forward New York developer Tankhouse, 144 Vanderbilt was constructed using stacked concrete blocks that rise from the north to south its tallest point facing busy Myrtle Avenue.

The facade of the 89,000-square-foot (8,300-square-metre) building, which is six storeys tall at its highest point, consists of precast concrete panels with a fluted texture, and is coloured a rosy pink.

As much of the neighbourhood consists of brownstone buildings and red-brick structures, the studio found that the pink colour created a sense of consistency, while still standing out.

“It’s both contextual, but also slightly stands out, because of the because of size and being in a corner,” SO-IL co-founder Jing Liu told Dezeen.

“We knew that it needed to have a civic presence.”

The building has different scales on the residential and commercial sides

The panels follow the structure’s irregular stacking pattern, which produces recesses, stacks and cantilevers that provide visual interest and create opportunities for balconies, while also articulating windows in a way that maximises light.

Furthering the contextualisation, Liu compared the stacking of the facade to the way that brick buildings are assembled. She added that the differing orientations of the units allow for individuality in the apartments.

Different orientations of the units created individuality for the apartments and a distinct facade

“There is this sense of coming home that you rarely get when you live in an apartment building,” said Liu.

“So at this scale, it’s still possible to do so. We try to make every unit feel unique, even though it’s in a collective constellation.”

144 Vanderbilt has an extensive backyard element

SO-IL noted the building’s corner site sits on a zoning boundary, with Myrtle Avenue’s infrastructure being taller and commercial in function, while Vanderbilt Avenue is more residential.

The stepping up from Vanderbilt towards Myrtle accounts for this shift within the building itself, according to the studio.

It has both outdoor and indoor circulation elements, opening up the back of the building

“Its distinct corner location, straddling two zoning districts, heavily influences the building’s structure and layout,” said SO-IL.

“The project explores these two contrasting urban experiences, creating a structure that acts as a porous barrier, housing a tranquil inner haven that contrasts with the vibrant street life.”

Read:

SO-IL completes perforated-metal facade of residential tower in Brooklyn

This “haven” references the generous public interior spaces, including a mezzanine above a social lobby and a “verdant, secluded backyard”.

These interior spaces reflect recesses and voids of the facade, and the studio noted that all of the apartments in the building not only face the street, but also the interior of the building, adding to the “porous” nature of the building.

The main lobby has a USM desk and seating

The concrete columns that line the building’s entrance also appear in the backyard. Inside, the columns play a starring role, lining the mezzanine lobby and reaching up to the ceiling from the double-height co-working space below grade.

For the mezzanine lobby, the floors are highly polished, and the walls, along with some of the columns, are covered in a grey-brown brick.

A co-working space features in the double-height space below the lobby

On the ceiling, a ventilation block was given a circular aspect and metal cladding that gives it the appearance of a decorative installation crowning the lofty public space.

A playful USM Modular Furniture entry desk tapers into lobby seating, mirroring the taper of the building’s exterior.

Railings inside the public area and on the outdoor circulation are a matte green, matching the deep window frames that look out over the landscaped backyard and an interior courtyard, accessible from the wood-floored coworking space.

Interior courtyards feature along the perimeter

Landscape architect Marie Salembier and designer/researcher Julia Watson created the gardens, which, according to Tankhouse feature 275 feet (83 metres) of pathways.

AIA sues Donald Trump over Kennedy Center renovation in unprecedented coalition

Ben Dreith · Dezeen Architecture

US organisations the American Institute of Architects and Docomomo US are among the plaintiffs in a lawsuit suing US president Donald Trump over his proposed renovations for the Edward Durell Stone-designed Kennedy Center.

Eight plaintiffs submitted a lawsuit this morning in an attempt to pause proposed renovations to the John F Kennedy Center for the Performing Arts in Washington DC.

The plaintiffs include the American Institute of Architects (AIA), Docomomo US, the Cultural Landscape Foundation, the American Society of Landscape Architects, the Committee of 100 on the Federal City, DC Preservation League, the National Trust for Historic Preservation and the Society of Architectural Historians.

Unprecedented coalition of preservationists

According to the group of plaintiffs, the lawsuit represents one of the largest legal coalitions of preservation bodies in history.

“No plaintiff can remember an instance in which so many national and regional organisations have coalesced to defend a single historic building and its grounds, reflecting both the Kennedy Center’s significance and the breadth of concern that the administration’s approach could weaken longstanding federal protections for historic sites nationwide,” said the plaintiffs.

Named as defendants in the lawsuit are president Donald Trump in his capacity as chair of the Board of Trustees of the Kennedy Centre, the Smithsonian Institute, the National Capital Planning Commission, as well as other government organisations and officials.

“It’s not about the president’s tastes. It’s about the rule of law”

The lawsuit contends that the administration must adhere to the processes in the National Historic Preservation Act and the National Environmental Protection Act before proceeding with planned renovations to the centre.

Given this, the plaintiffs demand that proper review and authorisations by congressional officials should precede any renovations. The lawsuit, if successful, would halt work on the structure until such authorisations and associated public reviews are completed.

Read:

Corinthian columns proposed for White House to match ballroom extension

“The Trump administration appears to believe that they can skip those federal requirements and go right to alterations,”

attorney and co-founder of Cultural Heritage Partners Greg Werkheiser told Dezeen.

Cultural Heritage Partners is one of the law firms representing the plaintiffs, along with Foley Hoag and Lowell & Associates, all of which have open cases against the administration relating to other preservation issues, such as the Eisenhower Executive Office Building, the East Wing expansion, and the East Potomac Golf Links.

“Each of these cases is not about the politics,” said Werkheiser. “It’s not about the president’s tastes, whether good or bad. It’s about the rule of law and doing what Congress intended.”

“I’m not ripping it down,” says Trump

Last week, the board voted to close the centre for years for renovations after voting to add Trump’s name to the centre, which was built in 1971.

On 13 March, president Trump released renderings on his Truth Social account, showing a building structurally akin to the current modernist building. In the post, the president said that the steel and some of the existing marble of the building would be maintained, saying, “I’m not ripping it down.”

Werkheiser said that the case is informed by the contradiction between the assurances given by the president about the East Wing and the reality of its demolition last fall.

“The hardest lesson for America to learn is that we cannot take for granted assurances from the White House,” he said. “For the East Wing matter, the President himself told the American public that to build the ballroom, the East Wing would not be touched, and then days later, it was gone.”

“So the lesson we’ve learned is timeliness and not to take those assurances for granted,” he continued.

Read:

How Donald Trump is using architecture to reshape Washington DC

Almost all the plaintiffs cited the historical significance of the building and the need for care and procedure in issues of its renovation.

“Architects have the core responsibility of protecting the health, safety, and welfare of the public and that includes the integrity of our nation’s civic and cultural landmarks,” said AIA president Illya Azaroff.

“The Kennedy Center is a public asset that must be shaped through transparency, expertise, and the communities it serves.”

In a statement to Dezeen, a White House spokesperson said that the administration is looking forward to “ultimate victory” in the dispute.

It's about the rule of law and doing what Congress intended.

Ben Dreith

Venice Biennale unveils renovated Central Pavilion

Amy Peacock · Dezeen Architecture

The Central Pavilion at the Giardini della Biennale is set to reopen for this year's Venice Art Biennale, following a restoration by Italian architecture studio Labics and architect Fabio Fumagalli.

Overseen by the Venice Biennale's Special Projects team, led by architect Arianna Laurenzi and engineer Cristiano Frizzelle, the revamp has reorganised exhibition spaces at the Central Pavilion, which hosts events for the Venice Art Biennale and Venice Architecture Biennale on alternating years.

The Central Pavilion will reopen for Venice Art Biennale following its restoration

Labics and Fumagalli began the restoration of the 1895 brick building in Venice's Giardini della Biennale in December 2024, working with engineering firms Buromilan and ia2 Studio Associato, and geologist Francesco Aucone.

Completed in time to host the Venice Art Biennale in May 2026, the team overhauled the building's exhibition spaces by creating a spatial hierarchy, aiming to celebrate the building's history while making it easier to navigate for visitors.

White walls divide the exhibition spaces

"The renovation of the pavilion goes beyond a mere functional update," said the Venice Biennale. "It rewrites the entire architectural organism, redefining relationships, sequences and connections."

"Relying on a stratigraphic approach to the building's history, the project enhanced the serial and essential nature of the architecture, preserving the memory of the different phases of construction but stripping it of all accretions and incongruous elements," it continued.

"The project demonstrates how reuse can be a creative act, not a nostalgic one: it selects, orders and interprets the different phases in the history of the pavilion to build a new architectural unity that can fulfil the contemporary needs of La Biennale."

The interiors were designed to be more legible

The Central Pavilion's Sala Chini gallery was transformed into a distribution space that leads to the building's centre, which is encircled by public service spaces, including a bookshop, cafe and educational room.

Under the building's pitched roofs, rectangular exhibition spaces have been divided by white walls, designed to host a range of temporary installations.

First image of Lina Ghotmeh's permanent Qatar pavilion for Venice biennale revealed

A cafe features glass doors that open onto a canal-side terrace, where canopies made from charred laminated wood and cross-laminated panels were added.

A bookshop has been added

Drawing upon Venetian wooden roof terraces, known as *altane*, the canopies were designed to connect the Central Pavilion with the surrounding landscape.

"These slender structures introduce an element of openness that connects the pavilion to the landscape of the Giardini, without competing with the existing masonry mass," said the Venice Biennale.

A cafe opens onto an outdoor terrace

Technical systems were hidden behind walls to keep the interiors free from clutter, and motorised shades were added to blackout the interior when necessary.

Funded by the Italian government, the restoration was carried out as part of the country's National Plan for Complementary Investments (PNC) of the National Recovery and Resilience Plan (PNRR).

Elsewhere in the Giardini della Biennale, Lina Ghotmeh is designing the permanent Qatar pavilion, which will be the first national pavilion on the site since 1995.

10 Tips for Breathtaking Dog Action Photography

Kelly Wolfe · Digital Photography School

The post 10 Tips for Breathtaking Dog Action Photography appeared first on Digital Photography School . It was authored by Kelly Wolfe .

This article was updated in January 2024 with contributions from Kelly Wolfe, Dave Spates , and Jaymes Dempsey .

Photographing dogs in action is an absolute thrill. One moment they're a ball of energy, and the next, they're soaring through the air to catch a Frisbee. Those freeze-frame shots elicit smiles from everyone who sees them.

But it's not just about clicking the shutter. A lot goes on behind the scenes. Dialing in the right camera settings, keeping the dog focused, and maintaining their enthusiasm are all part of the equation. In this article, I'll share some golden nuggets that have helped me capture those split-second wonders on camera.

So whether you're photographing your own furry friend or working on a pet photography gig, you'll find some actionable advice here. Let's jump right in and elevate your dog action photography skills!

1. Use the right gear

Before I delve into practical tips for dog action shots, I want to briefly explore the importance of gear, which can make or break your images.

If you want to take better action photos of dogs, I recommend a camera body with a fast burst rate. From my experience, five frames per second is the minimum. If your camera has a faster frame rate than that, you are going to increase your keeper rate as long as your approach and technique are on point, which we will get to shortly.

Additionally, fast autofocus is a must-have. Fortunately, many modern mirrorless cameras do an excellent job of tracking subjects as they move – and some even include animal eye AF modes so you can focus consistently on the dog's eye as they bound around the space!

I also recommend long and fast lenses. I've tried to photograph action shots with the 50mm f/1.8, and the Tokina 100mm f/2.8, with very little success. While both of these lenses are incredibly sharp, they are soft wide open and do not focus well on moving subjects.

Longer lenses with fixed apertures generally focus on moving subjects much faster than shorter lenses. They also keep you and your camera gear safer. Think about it. If you have a 45 point Border Collie running full speed right at you, you need to get the photograph and get out of the way quickly.

A longer lens will give you the time you need to move once the dog starts to fill the frame. I personally use the Nikon

300mm f/4 and sometimes I'll even throw a teleconverter on it for extended reach and cleaner bokeh.

A 70-200mm f/2.8 lens can also be very effective for dog action shots. The focal length is versatile enough for close-ups and wide shots, while the large aperture allows for shooting in lower light conditions!

2. Make sure the dog is safe

First and foremost, safety should be your priority. Dogs are not just subjects to be photographed; they are living, breathing beings that deserve respect and care.

Always choose a location where dogs are allowed. You don't want to get into trouble with authorities or risk the dog getting hurt in an unfamiliar environment.

Opt for areas that are far from any hazards. A busy road, a steep drop, or any place where a dog can get hurt should be avoided. Keep a close eye on the dog, especially if they're off-leash.

Ensure the area is secure enough so that the dog won't dash off to chase a squirrel or another dog. This might mean choosing a fenced-in park or similar space.

Know the dog's limits. Some dogs might have health issues that prevent them from running or jumping. Others might be too young or too old for strenuous activity. Listen to the dog's owner and observe the dog's behavior. Remember, capturing their personality is more important than getting an action shot at the expense of their well-being.

If the dog seems uncomfortable, slow down. It's perfectly fine to capture them at their own pace. No photograph is worth risking the safety or well-being of your subject.

In essence, always prioritize the dog's safety. This will not only make for a more relaxed and enjoyable session but will also ensure that you get natural, happy shots that reflect the dog's true spirit.

3. Get a real expression from the dog

Capturing genuine emotion in a dog's eyes can transform a good photo into a great one. The key to this lies not just in your camera skills, but also in how you interact with the dog.

Use a positive, encouraging voice when calling the dog over. Our four-legged friends are very attuned to human emotions, so a happy tone can go a long way. Make sure you and the dog's owner are both creating an atmosphere of positivity.

Prepare some rewards to place by your camera. Dogs love treats and toys, so having some handy can help you get those tail-wagging, tongue-out smiles. Discuss with the dog's owner to find out what their pet finds irresistible – be it a squeaky toy, a tennis ball, or a treat. The key is to keep the dog happy and engaged throughout the session. Remember, the goal is to capture a genuine moment of joy and playfulness. So, have fun and enjoy the process!

Self-healing CMOS Imager to Withstand Jupiter's Radiation Belt

Maya Posch · Hackaday

Ionizing radiation damage from electrons, protons and gamma rays will over time damage a CMOS circuit, through e.g. degrading the oxide layer and damaging the lattice structure. For a space-based camera that's inside a probe orbiting a planet like Jupiter it's thus a bit of a bummer if this will massively shorten useful observation time before the sensor has been fully degraded. A potential workaround here is by using thermal energy to anneal the damaged part of a CMOS imager.

The first step is to detect damaged pixels by performing a read-out while the sensor is not exposed to light. If a pixel still carries significant current it's marked as damaged and a high current is passed through it to significantly raise its temperature. For the digital logic part of the circuit a similar approach is used, where the detection of logic errors is cause for a high voltage pulse that should also result in annealing of any damage.

During testing the chip was exposed to the same level of radiation to what it would experience during thirty days in orbit around Jupiter, which rendered the sensor basically unusable with a massive increase in leakage current. After four rounds of annealing the image was almost restored to full health, showing that it is a viable approach.

Naturally, this self-healing method is only intended as another line of defense against ioniz-

ing radiation, with radiation shielding and radiation-resistant semiconductor technologies serving as the primary defenses.

Jai Courtney's Underrated Shark Horror Movie Out on Hulu Today

Maggie Dela Paz · ComingSoon.net

(Photo Credit: IFC)

Independent Film Company's acclaimed creature feature starring Suicide Squad's Jai Courtney has finally found a new streaming home, nearly a year after it had its world premiere at the 2025 Cannes Film Festival's Directors' Fortnight section. As of today, Courtney's survival horror movie *Dangerous Animals* is now officially streaming on Hulu.

What do we know about Jai Courtney's *Dangerous Animals*?

In *Dangerous Animals*, Courtney plays the role of a serial killer who uses sharks to kill his victims. The cast also included Hassie Harrison, Josh Heuston, Rob Carlton, Ella Newton, James Munn, Michael Goldman, Jon Quested, Liam Greinke, and more. Since its debut, the movie has received a Certified Fresh rating of 87% on Rotten Tomatoes, based on 181 reviews.

"When Zephyr, a rebellious surfer, is abducted by a shark-obsessed serial killer and held captive on his boat, she must figure out how to escape before he carries out a ritualistic feeding to the sharks below," reads the official synopsis.

The 2025 film was directed by Sean Byrne from a screenplay written by Nick Lepard. The film was executive produced by Fred Berger, Michael Glassman, Mehrdad Heydari, Marlaina Mah, Jacob Yakob, and Joseph Yakob.

Producers were Chris Ferguson, Brian Kavanaugh-Jones, Mickey Liddell, Troy Lum, Andrew Mason, and Pete Shilaimon.

Besides *Dangerous Animals*, Courtney was also seen in last year's Australian fantasy comedy *The Fox*. He most recently starred in Netflix's latest sci-fi action thriller *War Machine* with Alan Ritchson and Dennis Quaid. He is currently attached to star in the upcoming *Yellowstone* spin-off *Dutton Ranch*, which will be led by returning stars Kelly Reilly and Cole Hauser.

Studio Razavi adds circular conversation pit to coastal French home

Jon Astbury · Dezeen Architecture

A circular conversation pit sits at the heart of Seaside House, the renovation of a 1930s coastal cabin near Bordeaux by Studio Razavi.

Studio Razavi updating the 1930s cabin, which is nestled among pine trees at the tip of the Cap Ferret headland on the Atlantic coast, for contemporary living.

Driven by the idea of creating an uninterrupted flow through the centre of Seaside House, the studio removed all of the cabin's central partition walls to create a single, open living space, which opens out onto a decked terrace at either side.

Studio Razavi updated a coastal home in France

“The local lifestyle revolves around constantly moving in and out of houses, which led us to opt for a centrally sunken living room that creates a circulation flow all around,” project architects Guillen Berniolles and Michele Sacchi told Dezeen.

“All existing partitions were demolished, leaving the building's envelope untouched so a circle – the living room – could be placed at the centre of the house, surrounded by bedrooms,” they continued.

“Sinking the living area was important so it would be clearly delineated without interrupting views across the building, from one facade to the other.”

The studio added a circular conversation pit

Around the edge of this circular conversation pit, a low wall integrates elements that support the surrounding dining and kitchen areas, including a sink and storage units.

A pale concrete floor, white walls and oak carpentry bring a light, airy feel to the central space, while to the north a gently curved section of wall follows the curve of the central seating area.

The pit sits at the heart of the open-plan living space

The three en-suite bedrooms on either side of Seaside House's living area feature similar finishes, with windows overlooking the home's terrace and skylights in the bathrooms.

“Because everything is built directly on sand, floors are poured-in-place concrete to avoid joints and simplify maintenance,” explained Berniolles and Sacchi.

Studio Razavi completes “introspective” Apartment XVII in historic Lyon neighbourhood

“Most furniture pieces are solid wood or veneer, directly referencing this region, home to France's largest forest and Europe's largest man-made forest,” they added.

To the west of the main cabin, a smaller guest bedroom annexe is housed in a new, standalone volume clad in dark timber to blend with the surrounding tree trunks.

Play a .WAV Instead of Typing Line After Line Into Vintage Microcomputer

Donald Papp · Hackaday

[Casey Bralla] got his hands on a Rockwell AIM 65 microcomputer, a fantastic example of vintage computing from the late 70s. It sports a full QWERTY keyboard, and a twenty character wide display complemented by a small thermal printer. The keyboard is remarkably comfortable, but doing software development on a one-line, twenty-character display is just not anyone's idea of a good time. [Casey] made his own tools to let him write programs on his main PC, and transfer them easily to the AIM 65 instead.

A one-line, twenty-character wide display was a fantastic feature, but certainly lacking for development work.

Moving data wasn't as straightforward in 1978 as it is today. While the Rockwell AIM 65 is a great machine, it has no disk drive and no filesystem. Programs can be written in assembler or BASIC (which had ROM support) but getting them into running memory where they could execute is not as simple as it is on modern machines. One can type a program in by hand, but no one wants to do that twice.

Fortunately the AIM 65 had a tape interface (two, actually) and could read and store data in an audio-encoded format. Rather than typing a program by hand, one could play an audio tape instead.

This is the angle [Casey]'s tools take, in the form of two Python programs: one

for encoding into audio, and one for decoding. He can write a program on his main desktop, and encode it into a .wav file. To load the program, he sets up the AIM 65 then hits play on that same .wav file, sending the audio to the AIM 65 and essentially automating the process of typing it in. We've seen people emulate vintage tape drive hardware, but the approach of simply encoding text to and from .wav files is much more fitting in this case.

The audio encoding format Rockwell used for the AIM is very well-documented but no tools existed that [Casey] could find, so he made his own with the help of Anthropic's Claude AI. The results were great, as Claude was able to read the documentation and, with [Casey]'s direction, generate working encoding and decoding tools that implemented the spec perfectly. It went so swimmingly he even went on to also make a two-pass assembler and source code formatter for the AIM, as well. With them, development is far friendlier.

Watch a demonstration in the video [Casey] made (embedded under the page break) that shows the encoded data being transferred at a screaming 300 baud, before being run on the AIM 65.

Dior unveils golden bamboo version of Paris HQ

Cajsa Carlson · Dezeen Architecture

Fashion house Dior has revealed the Dior Bamboo Pavilion concept store in Tokyo's Daikanyama area with a facade that was designed to evoke Japanese bamboo forests.

The exterior of the 1,800-square-metre store was designed to replicate Dior's townhouse at 30 Montaigne, Paris, similar to Dior Gold House, another concept store that opened in Bangkok in 2024.

The store is clad in a golden bamboo facade and decorated with a star

The facade was designed to reference Japanese bamboo forests and is lit up at night. On top of the building sits the Dior star, which has been the symbol of the house since 1947.

While the facade reimagines a French townhouse created from a material that's common in Asia, the interior design aimed to blend French touches, such as Versailles parquet flooring, with examples of Japanese craftsmanship.

Versailles parquet flooring was used for the interior

Inside, the Dior Bamboo Pavilion has multiple green spaces, including a conceptual garden by horticulturalist Seijun Nishihata.

Artist Azuma Makoto designed a "green haven" of floral art, while designer Kodai Iwamoto created a teahouse made using Japanese craft techniques from materials such as thatch and bamboo.

The Dior Bamboo Pavilion also has lanterns decorated with Dior designs

In another nod to its location, the Dior Bamboo Pavilion has a pond filled with koi carp.

Other local touches include Japanese lanterns that were designed to resemble the Lady Dior bag and washi paper wall finishes sculpted like the Parisian mouldings in the headquarters.

Read:

Dior wraps Bangkok concept store in golden replicas of HQ facade

Described by the brand as "an Eden spread over more than 1,800 square meters, where a thousand and one botanical references come to life in homage to Christian Dior's love for the beauty of nature", the store was created to showcase the collections by new creative director Jonathan Anderson.

These include menswear and womenswear, as well as leather goods, jewellery and accessories.

Contemporary Japanese designers, including Takt Project, Sho Ota, Ayumi Shibata, We+, Hana Mitsui and Chikaken, have also created pieces for the space.

Visitors will also be able to experience French cuisine at the Cafe Dior, which features a menu by chef Anne-Sophie Pic.

Inside, washi paper was made to look like moulding

The Curse of Oak Island Season 13 Episode 20 Release Date, Time, Where to Watch

Shazmeen Navrange · ComingSoon.net

Photo Credit: History Channel

The Curse of Oak Island Season 13 Episode 20 release date and time are right around the corner, and many want to know the streaming details.

In the previous episode, the team made stunning discoveries on Lot 8 and in the Money Pit area. New research showcases a potential connection between the Oak Island mystery and the Knights Templar. The upcoming episode, titled "The Sands of Time," focuses on the team coming across the evidence of ancient man-made workings in the swamp. Soon, they find themselves making a major discovery on Lot 8.

Here are the release details of the upcoming episode.

When is The Curse of Oak Island Season 13 Episode 20 release date & time?

The episode's release date is March 31, and its release time is 6 PM PT, 9 PM ET.

Check out its release times in the U. S. below:

Timezone Release Date Release Time Eastern Time March 31, 2026 09:00 p.m. Pacific Time March 31, 2026 06:00 p.m.

Where to watch The Curse of Oak Island Season 13 Episode 20

You can watch The Curse of Oak Island Season 13 Episode 20 via The History Channel.

The History Channel falls under the banner of A+E Global Media. It features a range of infotainment programming, right from documentaries to non-fiction reality series.

What is The Curse of Oak Island about?

The Curse of Oak Island is a reality series that centers on the Lagina brothers, who embark on a mission to crack the mysteries surrounding the island. They collaborate with local experts, learn more about the island, investigate, and make shocking discoveries.

The official synopsis for The Curse of Oak Island is as follows:

"Follow brothers Marty and Rick Lagina through their effort to find the speculated – and as of yet undiscovered – buried treasure believed to have been concealed through extraordinary means on Oak Island."

Hellboy Star's Fighting Movie & More Included in This Week's Paramount+ Releases

Sibanee Gogoi · ComingSoon.net

Photo Credit: Prime Video

This week's new releases on Paramount+ include Hellboy Star Ron Perlman's intense showdown, The Day of the Fight, alongside a powerhouse lineup of fresh content.

Premiering on April 1, 2026, Day of the Fight (2023) is a gripping boxing drama helmed by Jack Huston. Michael Pitt stars as Mike Flannigan, a pugilist seeking redemption in the ring and in life. Mike's comeback fight at Madison Square Garden is haunted by past demons and fueled by a desire to make amends. With a ticking clock and a deadly secret, Mike's quest becomes a poignant journey of atonement, love, and sacrifice.

Besides Michael Pitt as Mike "Irish" Flannigan, the impressive cast of Day of the Fight (2023) includes Ron Perlman as Stevie, Mike's loyal trainer, while Nicolette Robinson plays Jessica, his estranged partner. John Magaro stars as Father Patrick Donnelly, an old friend turned priest. Steve Buscemi and Joe Pesci bring depth as Mike's uncle Colm and ailing father Tony, respectively. Anatol Yusef rounds out the cast as Sal.

Meanwhile, fans craving some laughs can binge-watch a Jackass marathon, as Paramount+ is releasing a cluster of Jackass movies and spin-offs on the same date this week.

Verge Select connects three weathering-steel volumes for Ontario painting studio

Ellen Eberhardt · Dezeen Architecture

Canadian design studio Verge Select has designed a studio for painter Janna Watson in Ontario, composed of three square volumes fused together to form a secluded forest retreat.

The Grey County studio is located in the county of the same name in Ontario, and, unlike a second, more urban studio operated by Watson, provides a space that “slows time”.

Verge Select has completed a painter’s studio in Ontario

Located in a forested glade, the structure is composed of three square volumes of varying size. They are slightly askew of one another and fuse where they meet.

The entire studio is clad in weathering steel, which will patina over time and “allow the building to recede chromatically into the forest floor” according to Verge Select.

The structure is clad in weathering steel

Watson’s programmatic needs largely informed the distinct shape.

“The studio takes shape as three distinct yet connected outcrops each responding to Watson’s brief for service functions, a light-filled workspace, and a flexible zone for photography and rest,” said the studio.

An elevated steel catwalk leads to an entrance

“The volumes nest around a central service core, opening outward through generous glazing that frames views of moss-covered stone and woodland canopy.”

On the interior, two of the cubes are largely open-plan, while the other is separated by a wall.

Another door leads into the forest

Watson’s painting area sits in the middle volume, surrounded by wide-open glazing. On one side, the central space steps up into the lounge area, while the service wing is off to the other side.

This service space includes a washing area tucked into a sharp corner, and also a bathroom shaped like a right triangle.

The central volume is wide open and wrapped in floor-to-ceiling windows

Across a central corridor is the main entrance to the studio via a steel catwalk, while a door on the other side of the structure also leads outside.

“Two arrival sequences – one compressed and inward-facing, the other emerging from the forest via a steel catwalk

– establish a rhythm of transition that echoes the artist’s working process,” said the studio.

A wash area is tucked into one corner

The studio’s ceilings reach ten feet high at their tallest, and are lined with “a gallery-style lighting system” for Watson’s work.

The space also contains a wood-burning fireplace and reflective, contemporary lounge chairs by designer Paolo Ferrari.

Cordero Pardee juxtaposes “old and new material cultures” for Vermont barn conversion

“Here, observation, walking, and seasonal change become active components of the creative cycle,” said the studio.

Verge Select is based in Thornbury, Ontario and was founded in 2009 by Michael Curtis. The studio specialises in architectural, furniture, lighting and interior design.

Other recent studio projects include a Vermont barn conversion for a photographer and painter and a garden studio in London by Delve Architects.

Tom Cruise's \$598M Flop & More Included in This Week's Prime Video Releases

Ritika Singh · ComingSoon.net

Photo Credit: 20th Century Studios

Amazon Prime Video's TV and movie release schedule for March 30 to April 5, 2026, includes a Tom Cruise action flick.

On April 1, *The Boss Baby* (2017) drops on Amazon Prime Video. The animated film follows Tim, who feels jealous of his little brother receiving attention from their parents. He then finds out that the baby can talk, and the two team up for a mission.

Furthermore, the action drama *Top Gun* (1986) arrives on the streaming platform. It follows a top pilot named Maverick who gets a chance at redemption after losing his friend. As such, he strives to prove himself while facing every challenge that comes his way.

Also coming to Prime Video is *Mission: Impossible 8 or Mission: Impossible – The Final Reckoning*. It resumes Ethan Hunt and his team's adventure to protect mankind. This time, their fight is against a rogue artificial intelligence.

This week's new Prime Video releases from March 30-April 5

Below are all the new TV shows and movies being added to Prime Video from March 30 to April 5.

Studio Dera adds sculptural extension to Mozart House in London

Jon Astbury · Dezeen Architecture

Full-height windows framed by sculptural panels of glass-reinforced concrete overlook two stacked courtyards at Mozart House, a London home extended by local practice Studio Dera .

Located in the Belgravia Conservation Area, the Georgian terraced home is famous for being both the site where Mozart composed his first symphony at eight years old and later as the home of author Vita Sackville-West and politician Harold Nicolson.

Studio Dera has extended a Georgian terraced home in London

Studio Dera was asked to create additional living space for the client, expanding an existing one-bedroom extension at the end of the home's garden.

This included transforming the volume of a former basement pool into an additional bedroom, excavating further to create a small lounge overlooking a sunken courtyard.

Glass-reinforced concrete panels frame full-height windows

“The deep rear garden gave us the opportunity to think of the project as part of the landscape, rather than as a conventional extension,” Studio Dera co-founder Marcel Rahm told Dezeen.

“Matching the volume of the former pool for the extension allowed us to get bold and creative with the extension while still allowing the Georgian house to retain its presence,” he added.

The interiors overlook two stacked courtyards

Studio Dera described the layout of the home, moving from the living area of the main home into a glazed link corridor that runs along the edge of the garden, as an “episodic journey”.

Full-height sliding doors open onto an upper courtyard, with a staircase leading down into the lower courtyard. This sunken space sits adjacent to the new lounge space and the dining room within the original home opposite.

Read:

Pinzauer transforms historic Hampstead home with concrete-framed pavilion

Above the excavated area, the ground-floor bedroom volume was designed to feel like a garden pavilion, with a narrow, deep-set frame surrounding a large set of sliding glass doors that link it directly to the courtyard.

“We were interested in the new work feeling like an extension of the domestic garden landscape, at moments almost becoming a landscape itself,” said Rahm.

A second bedroom and lounge space were added to the home

“The excavation grounds the project in the site, and the lighter pavilion elements bring openness and repose,” Rahm added.

“The sculptural glass-reinforced concrete (GRC) intervention – particularly the light pavilion of the new bedroom at the rear – helps balance the weight of excavation with a more delicate architectural presence.”

The home's layout is described as an “episodic journey”

Both courtyards are paved, with large round planters potted with trees and shrubs. In the upper courtyard, areas of translucent walk-on glass provide natural light for the lounge and bedroom below.

Inside, finishes have been chosen to feel “timeless, tactile and robust”, with travertine, timber and textured lime plaster echoing the sculptural GRC elements of the exterior.

Travertine, timber and textured lime plaster line the interiors

Elsewhere in London, architecture studio Pinzauer recently extended the former home of Anna Freud, the daughter of Sigmund Freud, adding similarly pavilion-like, concrete-framed spaces overlooking its rear garden.

Other London house extensions recently featured on Dezeen include Komorebi by ConForm , which uses perforated floors to filter light, and Druid Grove by CAN , which features cave-like openings and green timber tendrils.

The post Studio Dera adds sculptural extension to Mozart House in London appeared first on Dezeen .

V-Cut Flats Are The 2026 Way To Shop The Ballet Shoe Trend

Ruby Ford-Dunker · Refinery29 Fashion

Photo Credit: Joey Andrew

Ballet flats are undoubtedly one of this season's defining trends, with the dainty footwear taking over storefronts, closets, and sidewalks alike. Whether rendered as slingbacks, wrap-ties, or Mary Janes, the preppy silhouette is always chic and inherently sweet. But now, a more sophisticated (and dare I say edgy) variation has entered the chat: V-cut flats.

Major fashion houses can be credited for the surge in angular vamps, with the Chanel pre-fall collection, full of sharp two-tone iterations and Stella McCartney's spring runway featuring ruby-red takes. These designs prove that the streamlined footwear can take on softer, rounded cuts or dramatic, pointed uppers—much like V-neck sweaters, where some dips are deep and others are barely noticeable. Still, it remains a tapered cut, where the tiniest detail makes all the difference. But the footwear trend didn't start or end on the catwalk.

Hollywood It girls have been donning ballet shoes like clockwork, with Kendall Jenner spotted in a black-seamed pair styled alongside an athleisure set. Meanwhile, Zoë Kravitz wore her own V-cut shoes with a flowing dress, and Katie Holmes styled hers with a tiered maxi skirt and simple tee. The wide range of style aesthetics proves how versatile the geometric footwear is, seamlessly integrating into a range of

wardrobes—even for those of us who aren't followed by the paparazzi.

V-cut flats aren't only closet friendly, but they're chameleon-like. Whether you're headed to the office, grabbing rooftop drinks, or are jet-setting off to your next getaway, the multi-purpose style adapts to a variety of occasions. The appeal lies in the footwear's streamlined look, consisting of sleek lines, staple hues, and polished details.

Both luxury designers and more accessible options are also up for grabs, ensuring everyone can find their perfect V-cut flats, no matter the budget. The Row Stella Leather Slippers offer a chocolate-brown glove version, while the Reformation Blaine Flats deliver a minimalist approach. Maximalists may gravitate towards the Anthropologie corset shoes or the Khaite embroidered Marcy Flats.

If you're ready to add a pair of polished V-cut flats to your lineup, the below picks are sure to impress.

Like what you see? How about some more R29 goodness, right here?

brown butter snickerdoodles

deb · Smitten Kitchen

Friends, it's snickerdoodle season. If you didn't know that snickerdoodles had a season, let me paint a picture for you: you're coming inside on a blustery and colder-than-you'd-expected October day so you hadn't dressed for it and you can't wait to announce what my kids always laugh at me for saying when I walk through the door: "Well, that's enough doing things for me today!" and forswear things like "being outside" and "hard pants" for the rest of the evening but what is this! What is this god-like aroma of buttery baked cinnamon sugar warmth that has permeated your senses? Is it a scented candle, i.e. the idea, but not the substance of a thing you love? No, it's snickerdoodles. And you're about to eat a warm one, which feels like climbing inside It's The Great Pumpkin, Charlie Brown while also, simultaneously, getting to be this dog. I'm not saying you cannot experience this sensory transcendence on a day in January or June, but it hits on a different, worldview-shifting, level when cold air is still a novel thing.

Paula Patton's R-Rated NSFW Movie Is Coming To Prime Video

Ishita Verma · *ComingSoon.net*

Image credit: Universal Pictures

The R-rated action comedy film *2 Guns* , starring Denzel Washington and Paula Patton , is set to arrive on Prime Video . The film was directed by Baltasar Kormákur and was released in theaters on August 2, 2013. The movie was a success at the box office despite a lukewarm reception from the critics.

2 Guns to stream on Prime Video next month

The 2013 action movie *2 Guns* will arrive on Amazon Prime Video on April 1, 2026, according to a report by Fandomwire .

2 Guns, which is a buddy cop movie, features a stellar cast including A-list actors like Mark Wahlberg, Denzel Washington, Paula Patton, James Marsden, Bill Paxton, and many more. The movie was written by Blake Masters and was produced by Universal Pictures.

The film became a hit at the box office across the globe. It was made on a reported budget of approximately \$61 million and opened to \$27 million at the box office . The movie grossed around \$75 million at the domestic box office and \$56 million internationally. This brought the movie's global collection to over \$131 million.

On Rotten Tomatoes , *2 Guns* holds a score of 64 percent on the Tomatometer, based on the critic reviews. Meanwhile, on the

Popcornmeter, it received a slightly higher score of 66 percent based on audience reviews. On Metacritic , the film earned a more middling Metascore of 55 from critics, but a much more favorable score of 6.6 from users.

The movie follows the story of DEA agent Bobby Trench, played by Washington, and US Navy officer Marcus Stigman, played by Wahlberg, who are both independently working undercover as members of a narcotics syndicate. However, after they pull off a highly successful bank robbery, they find themselves in the middle of a wider conspiracy involving the CIA and must fight together to survive.
