FRONT PAGE **SRA Status Update**

PubMed Health

SRA Archive is still in service.

Recently, NCBI announced that due to budget constraints, it would be discontinuing its Sequence Read Archive (SRA) and Trace Archive repositories for high-throughput sequence data. However, NIH has since committed interim funding for SRA in its current form until October 1, 2011. In addition, NCBI has been working with staff from other NIH Institutes and NIH grantees to develop an approach to continue archiving a widely used subset of next generation sequencing data after October 1, 2011.

We now plan to continue handling sequencing data associated with:

RNA-Seq, ChIP-Seq, and epigenomic data that are submitted to GEO

Genomic and Transcriptomic assemblies that are submitted to GenBank

16S ribosomal RNA data associated with metagenomics that are submitted to GenBank

In addition, NCBI will continue to provide access to existing SRA and Trace Archive data for the foreseeable future. NCBI is also continuing to discuss with NIH Institutes approaches for handling other next-generation sequencing data associated with specific large-scale studies.

Build 135: Human SNPSNPLinkHistory.bcp.gz FTP file update

PubMed Health

The database file SNPSNPLinkHistory.bcp.gz has been updated on the FTP site to record the history of submitted SNP (ss) numbers that were withdrawn by submitter when build 135 was released.

ftp://ftp.ncbi.nih.gov/snp/organisms/human_9606/database/organism_data/SNPSNPLinkHistory.bcp.gz

Please contact snp-admin@ncbi.nlm.nih.gov if you have any questions or concerns.

Regards,

dbSNP Production Team

A double prix week

Petr Mitrichev · Petr Mitrichev (competitive programming)

Before I cover the last week, I need to mention the 4th Universal Cup Stage 5: Nanjing, which happened the week before and which I forgot to cover (problems , results , top 5 on the left, analysis in Chinese). Even having only 2 out of 3 teammates did not stop team USA1 from winning by a whole problem. Congratulations!

The Universal Cup can't stick to the plan of having rounds only every other week, so Stage 6: Shenyang took place last week (problems , results , top 5 on the left, analysis in Chinese). The first two places look suspiciously similar to the previous round, but for the veteran teams Polish Mafia and Almost Retired Dandelion who also solved everything this was the best result of the season. Well done!

Codeforces Round 1066 wrapped up the week (problems , results , top 5 on the left, analysis). Some of the Universal Cup stars were also strong this time, but they were complemented in the top 5 by jiangbowen and PEIMUDA who were not at the very top in the team rounds. Congratulations on the nice individual performance!

Thanks for reading, and check back next week for a more meaningful summary!
