Ultrahuman's New Ring Pro Is Finally Available in the US

Beth Skwarecki · Lifehacker

Ultrahuman finally has a smart ring back on the U. S. market, and it's the Ring Pro, the new model with the feature-packed charging case . Pre-orders are now open , with early bird prices starting at \$349. The regular price will be \$479 for the ring plus case.

The ring will begin shipping May 15. The company is using a tiered model for early bird pricing, where the price bumps up after a certain number of rings are sold. Here's the schedule:

\$349 — first 1,000 orders (\$130 off)

\$389 — next 2,000 orders (\$90 off)

\$429 — next 3,000 orders (\$50 off)

\$449 — until pre-orders close.

Ultrahuman's smart rings have been off the U. S. market since October 2025, due to legal action by Oura. As I detailed here , Oura sued several other smart ring makers over patent infringement and won a judgment by the U. S. International Trade Commission. As a result, most other smart ring companies had to leave the U. S. market or reach a deal with Oura. Ultrahuman found a third option—continuing to develop a ring they already had in the works, betting that the ITC would rule its design is different enough that it does not infringe Oura's patent.

That bet seems to have paid off. U. S. Customs and Border Protection has officially signed off on the new design, allowing it to be sold here. Ultrahuman's older designs, like the Ring Air I reviewed last year , are still banned.

What's new with the Ultrahuman Ring Pro

I wrote more about the Ring Pro here . It's got a faster processor with "on-chip machine learning," a 15-day battery life, and the ability to hold 250 days of data if you're unable to sync your ring for extended periods. The physical shape is similar to the Ring Air (no sensor bumps, but there is a flattened area at the bottom of the interior), and it has break points for easier removal of the ring in an emergency.

The cleverest feature of the Ring Pro is its charging case, which can store data, flash the firmware, and deliver haptic alerts. It also has a speaker for alarms and for sounding when you use the "find my case" feature. The charger can charge wirelessly.

Ultrahuman has since announced that you'll have the option to buy the ring packaged with the charging case for \$479, or with just a "mini charger" (presumably similar to the Ring Air's charger) for \$399. The case will be available separately for \$100.

FEATURES

This Unlocked Pixel 10 Is \$250 Off for the Amazon Spring Sale

Pradershika Sharma · Lifehacker

We may earn a commission from links on this page. Deal pricing and availability subject to change after time of publication.

Google's Pixel 10 launched in August 2025 at \$799, which already made it a reasonable flagship then, if you liked Google's software-first approach to Android. Now it's down to \$549 for the 128GB unlocked model on Amazon's Spring Sale—a \$250 drop and its lowest price yet, according to price trackers . The Pixel 10 Pro is also discounted to \$749 from \$999, which puts both phones in a much more competitive place than they were at launch. Buying an unlocked Pixel 10 means you are not tied to any carrier, so you can switch networks, use local SIMs while traveling, or avoid long-term contracts.

What you're getting here is Google's latest Tensor G5 chip paired with 12GB of RAM. That extra memory helps when using on-device AI features like Magic Cue, which processes tasks locally instead of relying on the cloud. In practice, this shows up in faster photo edits, smarter suggestions, and less waiting when switching between apps. Compared to the Pixel 9a's 8GB of RAM, the Pixel 10 feels better prepared for heavier use over the next few years. As for its camera setup, this is the first standard Pixel to include a telephoto lens, so zoom shots hold detail better instead of falling apart past 2x or 3x. This PCMag review also noted better detail retention and more accurate colors compared to the previous generation. You also get the new Qi2 magnetic charging system, which works with MagSafe-style accessories, something Android phones have largely skipped until now.

That said, the Tensor chips don't match the raw performance of Apple's A-series or Qualcomm's top Snapdragon chips, so heavy gaming or sustained workloads can show some limits, according to our associate tech editor Michelle's review . Battery life is also decent but not class-leading, especially if you lean into AI features or camera use. Still, what the Pixel 10 does well is balance. It gives you strong cameras, a clean Android version with fast updates, and useful AI features in a compact design. And at \$549, it becomes easier to recommend, especially if you want a smart, camera-first Android phone that will age well.

This TP-Link Wifi Router Is 44% Off for the Amazon Big Spring Sale

Stephen Johnson · Lifehacker

We may earn a commission from links on this page. Deal pricing and availability subject to change after time of publication.

If your wifi is too damn slow (and I bet it is), the bottleneck is probably the router. This TP-Link Archer AXE75 might be the solution, and it's 44% off for Amazon's Big Spring Sale, bringing it down to \$112.99—and it's already a good deal at the full price.

TP-Link Archer AXE75

\$112.99 at Amazon

\$199.99 Save \$87.00

\$112.99 at Amazon

\$199.99 Save \$87.00

This is a Wi-Fi 6E router, which unlocks the 6GHz band, so it's a serious router for the price of a bargain one. It features a 1.7 GHz Quad-Core CPU, so it won't freeze up when you're gaming while someone else is streaming 4K in the next room, and it has six high-gain antennas that are built to kill dead zones in medium-to-large homes. Check out PCMag's review for more details.

That's the good news. The bad news is the FCC regulations regarding foreign-made routers going into effect. Like most routers, AXE75 is "foreign made"—but the regulations only affect the future authorization of brand-new models. Since the Archer AXE75 is already an authorized, existing model, you can legally buy and use it without worry. But there's a caveat: The FCC has allowed security updates for these models through March 1, 2027. After that, it's not certain it will be supported. TP Link says it's planning to move manufacturing to the U. S. . If that happens, the FCC is expected to extend its waiver, and the device will be supported. But no one can say for sure.

This 13-Inch M4 MacBook Air Is \$250 Off for the Amazon Big Spring Sale

Pradershika Sharma · Lifehacker

We may earn a commission from links on this page. Deal pricing and availability subject to change after time of publication.

The 13-inch Apple MacBook Air (2025, M4, 512GB) is down to \$949 for Amazon's Big Spring Sale , a \$250 drop from its usual \$1,199 and its lowest price yet, according to price trackers . This is Apple's most accessible laptop, and an easy-to-recommend choice as a long-term machine for everyday use. Reviews back that up, with PCMag giving it an “outstanding” rating and naming it the best ultraportable laptop of 2025 . Over at Lifehacker, senior tech editor Jake Peterson has also pointed out in his coverage that this Air is a better value for most buyers than stepping up to a MacBook Pro , especially at a discount like this.

Apple MacBook Air (2025)

\$949.00 at Amazon

\$1,199.00 Save \$250.00

\$949.00 at Amazon

\$1,199.00 Save \$250.00

The M4 chip keeps things feeling quick in everyday use. You can move between a bunch of tabs, documents, and light edits without things getting stuck or slowing down. Apple has also made 16GB of RAM the standard this time, which helps the laptop hold up better over time. It's the kind of change you notice after a few months, when everything still runs the way it did on day one, even if you're someone who leaves apps open in the background. The 13.6-inch Liquid Retina display is also easy to like. Text looks crisp, colors feel natural, and it's bright enough to use comfortably in most lighting. Using it day to day feels straightforward—the keyboard is comfortable enough that you don't think about it much, and Touch ID makes small things like unlocking or approving downloads faster.

You also get Wi-Fi 6E and MagSafe charging, so you can free up the two Thunderbolt 4 ports for accessories. Those ports can also drive up to two external 6K displays, which is more flexibility than older Air models offered. That said, the port selection is limited to two USB-C connections, so using multiple peripherals often means adding a hub. Storage is fixed at 512GB unless you pay more upfront, and upgrades get expensive quickly within Apple's ecosystem. This also is not built for heavy, sustained workloads like advanced video editing or 3D rendering, where a MacBook Pro is still the better fit. But for everyday use, this covers a wide range of tasks without feeling restrictive, and the combination of performance, display quality, and battery efficiency makes it the best MacBook for most people .

The Best Deals I've Found on Fitness Wearables in Amazon's Big Spring Sale

Beth Skwarecki · Lifehacker

We may earn a commission from links on this page. Deal pricing and availability subject to change after time of publication.

I've been keeping an eye on all the best deals on fitness tech, and here are my top picks. Several wearables are on their lowest price ever. While many of the sales are on slightly older models, everything I'm including here is a device I think is very much worth buying, or at least considering, in 2026. There are deals on fitness brands like Garmin and Suunto, budget options from Fitbit, and even smartwatches from Apple, Google, and Samsung.

The best deals on Garmin watches

Garmin Vivoactive 5 , \$179.99, down from \$194.85, or \$299.99 when it first launched in 2023.

Garmin Forerunner 265 and 265S , \$344.95, originally \$449.99 when it first launched in 2023. (It has since been replaced by the Forerunner 570.)

Garmin Forerunner 965 , \$499.99, originally \$599.99 when it first launched in 2023. (It has since been replaced by the Forerunner 970.)

Garmin Forerunner 165 , \$199.99, down from \$249.99 when it first launched in 2024. This is a slightly older model but is still current—Garmin has not released a replacement.

Garmin Forerunner 55 , \$169.00, down from \$199.99 when it first launched in 2021.

Garmin Instinct E , \$214.99, originally \$299.99. This is a current model, which launched in 2025.

The best deals on Polar heart rate monitors

Today's deals on Polar heart rate monitors include:

Polar H10 : \$76.99, down from \$104.99. This is widely regarded as the best heart rate monitor out there.

Polar H9 : \$56.44, down from \$69.90. This model can only pair to one Bluetooth device at a time, which is enough for most of us.

Everything You're Entitled to When Your Flight Gets Delayed or Canceled

Meredith Dietz · Lifehacker

In recent days, travelers have faced the highest wait times in TSA history, “with some wait times greater than 4.5 hours,” said the agency’s acting chief, Ha Nguyen McNeill, in a testimony before the House Committee on Homeland Security on March 25.

Unlike weather delays that clear up on their own, this madness could continue as long as the partial government shutdown does. Airlines are bracing themselves for more record-breaking security lines, which means more chaos and more uncertainty. You want to be prepared to fight for what you’re entitled to when an airline, for lack of a better phrase, utterly screws you over. Here’s how to always get the most money possible from a canceled or delayed flight.

Know your airline passenger rights

Federal law still does not require airlines to provide passengers with money or other compensation when flights are delayed. This means that in most cases, compensation is at the discretion of the airline.

Canceled flights

If an airline cancels your flight less than 14 days before departure and you choose to cancel your trip entirely, you’re entitled to a refund of both your plane ticket and any pre-paid baggage fees. This typically applies even if you have non-refundable tickets.

Delayed flights

Again, federal law does not require airlines to provide passengers with any sort of reimbursement when flights are delayed. When flights are delayed for unpredictable events like weather or mechanical issues, compensation is at the discretion of the airline. However, the airline is required to rebook you on a different flight at no additional cost. And if you end up stuck in the airport, it’s up to the airline to decide what sort of vouchers they offer—more on that below.

Baggage issues

Few things are as frustrating as finally making it to your destination, only for your luggage to be lost somewhere between your departure and your arrival. Airlines are required to compensate you for any “reasonable, verifiable, and actual” expenses that arise due to your baggage damage or delay, according to the DOT.

Unfortunately, you may not be fully compensated for everything that’s lost or damaged in your bag. There is also a cap on the amount of money airlines are required to compensate you if your bags are lost, damaged, or delayed. The maximum liability amount allowed by the DOT is \$4,700 per passenger. You should immediately notify your airline if your bag has been damaged and ensure the conversation

is documented so you can file a claim with the DOT if you are not properly compensated.

And if your bag is delayed, it’s the airline’s responsibility to find and get it back to you. While most airlines promise to bring your bag to your hotel or wherever you’re staying once it’s found, this is not a requirement nor a guarantee.

Overbooking and denied boarding

Somehow, overbooking flights is not only legal, but commonplace. When an airline overbooks a flight, it can either voluntarily or involuntarily bump passengers. Before bumping passengers involuntarily or without approval, airlines must seek out voluntary travelers willing to take another flight in exchange for compensation. You’ve probably heard airlines incentivize travelers with vouchers. However, if no one takes the customer service reps up on these voucher offers, the airline may involuntarily bump passengers or deny boarding. This turns into “denied boarding.”

Depending on the airline’s reasoning, you may be eligible for compensation if you are denied boarding. If you are bumped from a flight due to reasons such as overbooking, you may qualify for denied boarding compensation. However, passengers are usually not eligible for compensation if they experience any of the following situations:

Aircraft changes due to safety or operational reasons

A plane’s weight or balance restrictions prevent the passenger from boarding

A passenger is downgraded to a lower seating class for an overbooked flight

Charter flights that run outside an airline’s regular schedule are overbooked, delayed, or canceled

Flights on small aircrafts (less than 30 passengers) are overbooked, delayed, or canceled

International flights are overbooked, delayed, or canceled

To qualify for involuntary denied boarding compensation, you must have a confirmed flight reservation, you must have checked in and arrived at your gate on time, and you must be unable to reach your destination within one hour of your original flight’s arrival time. The compensation amount will depend on how long of a delay you face, which is outlined on the DOT website.

What exactly are you entitled to if your flight is delayed?

According to DOT, you are entitled to a refund if the airline cancels a flight, regardless of the reason, and you choose not to travel or accept travel credits, vouchers, or other forms of compensation offered by the airline.

But while airlines are required to give passengers refunds if their flights are outright canceled, the rules around delays are less clear. For instance, “significant delay” is not offi-

The cheapest stocks and shares ISA on the market

The Accumulator · Monevator

Disclosure: Links to platforms may be affiliate links, where we may earn a commission. This article is not personal financial advice. When investing, your capital is at risk and you may get back less than invested. With commission-free brokers other fees may apply. See terms and fees. Past performance doesn't guarantee future results.

What is the cheapest stocks and shares ISA available?

The investing world can be complicated, but this time we have a simple answer for you.

Right now the cheapest stocks and shares ISA is the DIY option from InvestEngine .

InvestEngine is the lowest cost stocks and shares ISA on the market because right now it costs nothing .

Zip! Nada!

Now that's my kind of price range!

Read on for more about InvestEngine's share ISA.

Cheapest stocks and shares ISA: good to know

InvestEngine's ISA costs zero for annual fees, dealing charges, FX fees, entry/exit levies and most of the other multi-headed investment costs that snap at our wallets like a financially-incentivised Hydra . (It's little known that the Ancient Greek polycephalic snake-beast was on a bonus scheme. Fifty drachma per hero slain.)

The only costs you will pay are the usual Total Expense Ratio / Ongoing Charge management fees that must be borne when investing in any fund, plus trading spreads. So far, so standard.

The platform's downside is that its range of ETFs is more restricted than costlier platforms, and you can only trade at fixed times per day.

Frankly though, I think that's a reasonable trade-off. Especially because you can easily create a good investment portfolio from the ETFs available.

Read our full InvestEngine review . We like it. Just make sure you choose the DIY ISA, not the managed one.

Our only concern is how long can the service remain free?

We've previously investigated how zero commission brokers make their money. In InvestEngine's case, it's mostly hoping you'll opt for its paid managed offering.

Cheapest stocks and shares ISA: alternatives

There are plenty of other commission-free brokers out there now including Freetrade , Lightyear , Prosper , Trad-

ing 212 , and IG. Prosper and InvestEngine don't charge FX fees, the rest do.

This piece explains how you can avoid FX fees using ETFs.

Some Trading 212 users also report paying higher bid-offer spreads on their trades than may be the case on other platforms.

It's very hard for us to know if they're right, but no platform can afford to offer its services for free. They all have to make money somehow. They will usually tell you how they do it if you search: "How does 'Broker X' make money?"

Cheap stocks and shares ISA hack

What if InvestEngine's prices creep up, or you don't like its pool of ETFs, or you want an alternative because you're concerned about the FSCS investor compensation limit of £85,000?

In that event let's recap our cheap stocks and shares ISA hack. It still delivers tax shelter satisfaction for an exceptionally low cost.

Here's how the hack works:

You begin by drip-feeding into your stocks and shares ISA with the best-value percentage-fee broker on the market.

Once your ISA is full you transfer it to the cheapest flat-fee broker.

You don't buy and sell your investments at the flat-fee broker. You only trade (for zero commission) on your percentage-fee platform.

In the new tax year, you open a fresh stocks and shares ISA with the percentage-fee broker.

Rinse and repeat.

You now enjoy a best-of-both worlds deal that takes advantage of the brokerage industry's niche marketing strategies.

Percentage-fee platforms offer the best terms to small investors. They tend to rake it in once your account swells beyond £25,000 to £50,000. They're relying on your inertia.

Flat-fee brokers offer good rates to large investors. They hope to make it up in trading fees. They're relying on high rollers who treat their portfolios like a night at the casino.

You can arbitrage these cost models, provided you're active in transferring your ISA and then near-comatose once you've parked it at your long-stay platform.

Cheap stocks and shares ISA hack in action

AJ Bell Dodl offers the cheapest percentage fee stocks and shares ISA.

To Build Strategy, Start with the Future

Harvard Business Review

Mark Johnson, cofounder of the consulting firm Innosight, says that too many managers develop strategy while focusing on problems in the present, and that's especially true during a crisis. Instead, he argues, leaders should imagine the future and work backward, so they can build their organization for that new reality. He shares practical steps managers can take to look beyond the typical short-term planning horizon and help their teams grasp future opportunities. Johnson is the coauthor of the HBR article "Leaders, Do You Have a Clear Vision for the Post-Crisis Future?" and the book "Lead from the Future: How to Turn Visionary Thinking into Breakthrough Growth."

IN BRIEF

Harvard Business Review, Harvard Business Review: In an age of rapidly changing technology, it's more important than ever for organizations to effectively support employee learning. Gianpiero Petriglieri, associate professor at INSEAD, has studied leaders who do this well and says they fall into three categories: custodians, challengers, or connectors. He explains which type of learning leader works best in which contexts and how all three approaches can help individuals and teams reach the next level. Petriglieri is author of the HBR article "Three Ways to Lead Learning."

Harvard Business Review, Harvard Business Review: Kathryn Judge, a finance professor at Columbia Law School, is troubled by the rise of intermediary platforms between products and services and the customers who eventually purchase them. Thanks to technology and globalization, she shows how the importance of "middlemen" in the value chain has increased, along with the length of global supply chains. Judge details the downsides and risks of this trend. And she explains how customers and workers alike can lead to intermediaries offering more transparency and social value. Judge wrote the book "Direct: The Rise of the Middleman Economy and the Power of Going to the Source."

Harvard Business Review, Harvard Business Review: What does it look like for a business in 2025 to build a strategy around sustainability? In this Future of Business series, IdeaCast hosts Alison Beard and Adi Ignatius sat down with four leading CEOs to understand where global business is going. In this episode, host Adi Ignatius speaks with Poul Weihrauch, CEO of Mars, about how he manages the family-owned global pet care, snacking and food company. They discuss balancing short-term performance with long-term goals, resilience, and the business case for sustainability-driven innovation.

Harvard Business Review, Harvard Business Review: When the work keeps piling on, there comes a time when everyone needs to say no. But how do you do so without offending your coworkers or hurting your career? Former host Sarah Green Carmichael, and Karen Dillon, the author of the "HBR Guide to Office Politics," talk about the best practices on saying no to work when you're overwhelmed.

Harvard Business Review, Harvard Business Review: Alex Lazarow, venture capitalist at Cathay Innovation, says that startups in cities around the U. S. and the world are creating their own rules for success. While Silicon Valley companies have sparked key innovations and generated huge wealth over the past few decades, not everyone should use them as a model. Innovation hubs in other areas can

The Growth of the Private-Sector Space Industry

Harvard Business Review

Many industries depend on the government to finance infrastructure and research before a true private market can develop. In the case of space, there is still a strong need for public-private collaboration. But as costs drop to reach space, more private-sector companies can enter the market. Matthew Weinzierl is a senior associate dean and professor at Harvard Business School, and Brendan Rosseau is a strategy manager at Blue Origin. They explain the evolving role of the U. S. government to foster innovation and competition as the space economy increasingly privatizes. They also identify the emerging opportunities for businesses and individuals. Weinzierl and Rosseau are authors of the book *Space to Grow: Unlocking the Final Economic Frontier*.

A Nobel Prize Winner on Rethinking Poverty (and Business)

Harvard Business Review

Esther Duflo, an MIT economist, won the 2019 Nobel Prize in Economic Sciences for her experimental approach to alleviating global poverty. Duflo's early life working at a non-governmental organization in Madagascar and volunteering in soup kitchens in her native France inspired her to study economics and research the root causes of poverty. With her fellow Nobel winners Abhijit Banerjee of MIT and Michael Kremer of Harvard, Duflo showed that effective policies often go against conventional wisdom and popular economic models. The only way to find out what works, she argues, is to rigorously test solutions on the ground, and she encourages businesses to do the same. With Banerjee, Duflo also wrote the new book *"Good Economics for Hard Times."*

Introducing a New Era of HBR IdeaCast

Harvard Business Review

Training Your Brain to Work More Effectively

Harvard Business Review

What if the key to efficiency in a world increasingly powered by AI wasn't quantity, but quality? Neuroscientist Mithu Storoni has looked at how and when our brains are the most creative and truly productive at knowledge work. As automation and AI take more rote tasks off our plates, she shares how we can train our brains to be more effective at doing work that really matters. She explains how our brains tackle different kinds of work, how we can better schedule our days to align with those states of mind, and what this all means for managers and organizations. Storoni is the author of the new book *Hyperefficient: Optimize Your Brain to Transform the Way You Work*.

Why Finance Needs More Humanity, and Why Humanity Needs Finance

Harvard Business Review

Mihir Desai, professor at Harvard Business School and Harvard Law School, argues for re-humanizing finance. He says the practice of finance, with increasing quantification, has lost touch with its foundations. But he says finance can be principled, ethical, even life-affirming. And demonizing it or ignoring it means that the rest of us – those not in finance – risk misunderstanding it, which has all kinds of implications for how we make decisions and plan for our futures. Desai is the author of the new book, *"The Wisdom of Finance: Discovering Humanity in the World of Risk and Return."* He also writes about finance and the economy for hbr.org.

IBM's Ginni Rometty on Skill-Building and Success

Harvard Business Review

A new sound is in store for the HBR IdeaCast. Every Tuesday, we'll keep giving you the insights, research, and advice you need to lead, featuring practical conversations with leading thinkers. But as Adi Ignatius, editor-at-large at Harvard Business Review, joins executive editor Alison Beard as cohost of the show, we're offering even more to better serve you.

Look forward to more interviews with C-suite executives, more expert perspectives on the most pressing, up-to-date problems facing leaders, and some special surprises for HBR subscribers. The new and improved HBR IdeaCast kicks off next Tuesday, be sure to hit subscribe so you don't miss an episode.

Tell us what topics you'd like us to cover: ideacast@hbr.org

For years, employers have used university degrees as a major requirement for hiring. But, for many jobs, success depends more on skills – and the ability to adapt and learn – than on piece-of-paper credentials. Ginni Rometty, former chairman and CEO of IBM, realized this early on – first by watching her mother and other female relatives support their families and later by seeing what it took to rise to the top in her own career. At the helm of IBM from 2012 to 2020, she pushed the company to adopt skills-first recruitment and development practices, and now she's encouraging other organizations to do the same through her work at the non-profit OneTen.

Rometty is coauthor of the HBR article “The New-Collar Workforce,” and the book *Good Power: Leading Positive Change in Our Lives, Work, and World*.

What You Must Deliver to Win Customers Today

Harvard Business Review

What if your customers aren't looking for better products and services, but for a way for themselves to become better? While the experience economy remains important, Strategic Horizons cofounder B. Joseph Pine II argues that it's not enough to acquire and retain customers in today's competitive environment. He sees the next wave in business as one focused on offering outcomes to customers - and that might even mean only getting paid when customers succeed. He shares how this model might actually reduce risk, what it means in a world of AI and mass personalization, and ways that companies can truly deliver on their promises. Pine is author of the book *The Transformation Economy: Guiding Customers to Achieve Their Aspirations*.

No Kings Rallygoers in New York Share Their Biggest Fears—and Greatest Hopes

James West · Mother Jones

I've covered all the No Kings protests in New York City since the start of Trump's second presidency. What has struck me about all of them is how they fuse people's fears with their hopes. The fear is what drives people onto the streets: threats to democracy, the war in Iran, attacks on LGBTQ Americans. The hope: each other, the promise of change. So, amid a raucous sea of angry, festive rallygoers along Manhattan's 7th Avenue on Saturday, I asked people: What is your biggest fear and greatest hope right now?

"I'm here because they're fucking building concentration camps that they're locking tens of thousands of people in, and ICE is in our fucking airports," the artist (and "Mother Jones fan") Molly Crabapple told me. "Too many people are dying and too many people are in cages." And while she doesn't typically think "in hope," she was inspired by the community. "I know we have each other and I don't know if that's enough, but that's all we have."

For Matthew Nichols, a 56-year-old arts worker, the greatest fear is November's midterms—that "there'll be some significant interference," he said. "All of these things that seemed far-fetched maybe a year ago or two years ago are actually coming to pass."

Ash, 29, a Mexican agricultural worker, says he fears people being silenced and "losing empathy" but, like others I met, pointed to "all

of us," gesturing around, as providing him with hope. "People from all walks of life. Rich people, poor people, white people, black people. Everyone. So, it's quite powerful."

Why Leaders Need to Value Their Retirement-Age Workforce

Harvard Business Review

A growing number of workers are reaching retirement age around the globe. At the same time, many countries face a worker shortage, especially in critical areas like health care. Ken Dychtwald, cofounder and CEO of Age Wave, says it's time for companies to stop overlooking this valuable labor pool, because AI alone won't alleviate the tight supply. He explains why many late-career people want to work longer. And he shares creative and often simple ways that companies can keep older workers engaged, including phased retirements, non-ageist recruiting, mentorship programs, and grandparental leave. Dychtwald is a coauthor of the HBR article "Redesigning Retirement."

Why Many Companies Get Layoffs Wrong

Harvard Business Review

From Microsoft to Google to Meta, many of the world's biggest tech companies have been announcing layoffs recently. Their explanation is usually that they overhired and need to cut costs. But Harvard Business School professor Sandra Sucher, who has been studying layoffs for years, says companies often underestimate the downsides. Layoffs don't just come with bad publicity, she explains. They also lead to loss of institutional knowledge, weakened engagement, higher turnover, and lower innovation as remaining employees fear risk-taking. And she says it can take years for companies to catch up. Sucher is a coauthor of the HBR article "What Companies Still Get Wrong About Layoffs."

What Kind of Networker Are You?

Harvard Business Review

Marissa King, professor at Yale School of Management, has studied the strengths and weaknesses of different types of social networks. She argues that most of us have a natural style of networking: we favor tight social circles, or brokering across varied groups, or having an expansive list of contacts. But she says we can also tweak the way we build relationships to meet our changing needs. For example, widening our outreach to boost creativity and innovation or focusing on trusted friends and colleagues to increase trust and happiness. King is the author of the book "Social Chemistry: Decoding the Patterns of Human Connection."

What Business Leaders Should Know About Cryptocurrency

Harvard Business Review

Jeff John Roberts, an author and journalist, dug deep into the world of cryptocurrency to figure out what the rest of us really need to know about it. He acknowledges that the proliferation and volatility of digital currencies can make them seem like a fad but argues that the oldest among them – bitcoin – and the blockchain technology behind it are here to stay because they offer a more efficient way for companies and consumers to transact. He describes in plain English how crypto works and explains why now is the time for forward-thinking business leaders to understand – and adapt to – this new kind of currency. Roberts is the author of the book "Kings of Crypto: One Startup's Quest to Take Cryptocurrency Out of Silicon Valley and Onto Wall Street."

Real Leaders: Oprah Winfrey and the Power of Empathy

Harvard Business Review

In 1976, broadcast journalist Oprah Winfrey moved to Baltimore to coanchor the evening newscast at a local TV station. But she struggled in that spot and was moved to the morning talk show. That demotion led Winfrey to discover a professional calling that aligned with her personal sensibilities and emerging strengths. In the final episode of a four-part special series on leadership, HBR Editor in Chief Adi Ignatius and Harvard Business School professor and historian Nancy Koehn trace Winfrey's career as an entrepreneur and leader of a media empire. They discover lessons on how to cultivate self-awareness, cross traditional boundaries, and responsibly wield influence.

Comedian Sarah Cooper On Bringing Humor to Any Career

Harvard Business Review

It's a cliché, but they say it's best to write what you know. That was the case for comedian Sarah Cooper, who rose to viral social media fame in the Trump era through her lip sync TikTok videos. She formerly worked at Yahoo and Google, and she found her way into comedy, in part, by looking at and pointing out the absurdities of corporate culture. She speaks about how humor helped her manage a team, why she took the big risk to quit her job, and how she's navigating the new work world of Hollywood. Cooper is the author of the forthcoming audio book "Let's Catch Up Soon: How I Won Friends and Influenced People Against My Will."

Brené Brown on Being a Steady Leader in Tumultuous Times

Harvard Business Review

Leadership takes daring and steadfastness even in the best of times. In eras of shaky political, economic, and social stability, researcher and author Brené Brown argues it is more important than ever to stay true to your values, make thoughtful decisions, and avoid succumbing to external pressures. The podcast host and University of Houston research professor shares what she's learned in her latest studies and explains how to avoid reactivity as an organizational leader navigating a distrusting and disconnected world. Brown is author of Strong Ground: The Lessons of Daring Leadership, the Tenacity of Paradox, and the Wisdom of the Human Spirit.

Best players for FC 26 The Bullet Man Evolution

Arka Sarkar · Destructoid

The Bullet Man Evolution has arrived in FC 26 as a free upgrade that you can use to improve up to two items of your choice in Ultimate Team. The stat upgrades are slightly tricky when it comes to efficient usage. However, there are still some good choices for the evolution and the boosts that it offers.

Table of contents

FC 26 The Bullet Man Evolution requirements

FC 26 The Bullet Man Evolution upgrades

Best players to use in The Bullet Man Evolution

FC 26 The Bullet Man Evolution requirements

Roles: Attacking Wing-

What You Need to Know About Executive Recruiting

Harvard Business Review

Professional search firms play a big role in discovering and choosing leaders for senior roles. That's why anyone with C-suite ambitions needs to understand the recruiting process and what these evaluators are looking for. Mark Thompson, chairman of the Chief Executive Alliance, and Byron Loflin, global head of board advisory at Nasdaq, explain the ins and outs of recruitment, how to develop your narrative and navigate formal assessments and reference checks, and the best ways to build ongoing relationships. Thompson and Loflin are authors of the HBR article "How to Stand Out to C Suite Recruiters" and the book *CEO Ready: What You Need to Know to Earn the Job and Keep the Job*.
