SOMEONE TO DAYDREAM ABOUT

Kirkus Reviews

Eighteen-year-old Natalie's Deaf family owns the Nielsen Family Deaf Center in Seattle, where they teach ASL. But Natalie's father was the heart of the place, and since his death, things have been going downhill. Miraculously, Natalie is offered a job that pays well enough to save the center—but it involves going on tour with boy band DAYDREAM and teaching their obnoxious frontman, Felix Song, ASL. Felix has never been a motivated ASL student despite his little sister's having degenerative hearing loss. On tour, Natalie bonds with the boys, gets a peek at the darker side of the music industry, and discovers that Felix may not be quite so annoying after all.

This fun, breezy read will appeal to romance lovers, followers of boy bands, those with a connection to the Deaf community, and fan fiction readers (DAYDREAM's fans share their stories on the site AO3). Alongside the romance, Langford incorporates elements of Deaf culture and community and touches on learning disabilities. These moments, while celebrating Deaf culture and disabled joy, sometimes read like clunky infodumps. The author portrays different approaches to communication realistically and without value judgments. Natalie's complex relationship with her mother is given room to breathe and avoids a too-neat ending. Natalie is cued white, and New Zealand immigrant Felix is of Korean descent.

Discover why effective investing begins with minimizing losses, how waiting for perfect information can result in missed opportunities, the strategies Brookfield uses to manage market risk while maintaining upside potential, and the key insights he gained working alongside Bruce Flatt.

This discussion goes beyond investment strategies, offering a glimpse into Connor's perspective on decision-making in an uncertain environment, mentorship, culture, positioning, and talent.

It's a rare inside look at the operations of one of the world's most tight-lipped firms.

Enjoy!

"When something feels 90% right, do the deal. The most important thing is that you do 10 of them."

If you can do the work but can't explain the work, it doesn't matter that you can do the work.

When you stop asking for permission, you start to trust yourself.

Working hard isn't just about grinding more; it's about being available for others.

"There is no limit to how much you can care about things."

In a crisis, don't mourn the damage. Instead, focus on capitalizing on the opportunity that just opened up.

Overbuild happens in every asset class, every cycle, everywhere. The question is, how do you protect yourself?

Isolate every bet.

You can't eliminate risk, but you can contain it.

Cash is like oxygen, you don't realize you need it until you can't live without it.

When you know the answer, do it now.

Keep your eyes on the horizon. "We learn a lot from the past, but we don't spend a lot of time dwelling on it."

"There's a false degree of precision in today's world of Excel. The reality is that so many times you just have to overlay good judgment, and you have to recognize that there are certain things outside of your control that your Excel model will make seem like a certainty, but aren't."

Working hard is 100% in your control.

Protect your downside. "If you underrate the worst-case scenario, the base case or the expected case will end up being very attractive."

Liquidity is consistently undervalued.

Maintaining Focus on What You Want

01:11:22

What is a Habit?

01:48:12

Complexity Vs. Simplicity

In this conversation, James explains how habits shape identity, why progress often stays invisible before it compounds, and how to design your environment so good behavior becomes the default.

You will learn how to stay consistent when motivation fades, stop quitting too early, and build habits that work across different seasons of life.

Available Now: Apple Podcasts | Spotify | YouTube | Transcript | X

1. Members have access to all of my *Atomic Habits* highlights in the repository.

“Every action you take is like a vote for the type of person you wish to become.”

“You cannot outwork the person working on a better thing.”

“The cost of good habits is in the present. The cost of bad habits is in the future.”

Prioritize work that keeps working for you once it's done. Build assets that accumulate, rather than tasks that evaporate.

Standardize before you optimize. You cannot improve a habit that does not exist.

Shape your environment with friction. Make things you don't want to do harder and things you do want to do easier.

Intensity makes for a good story. Consistency makes for good results.

“Do the obvious things first. That gets you 80% of the way there.”

Live in two timeframes: 10 years and one hour. Do something right now that benefits you in a decade.

“Don't be the first to tell yourself no. Let the world tell you no first.”

Use your current advantages to gain new advantages.

The work is not being wasted. It's just being stored.

Success isn't 10,000 attempts; it's 10,000 iterations. Don't just try again—try differently.

“The quest for novelty overpowers the desire for results.”

When something's working, we underestimate how long it can go for and how powerful it can be.

A lack of patience changes the outcome.

“If you're not outthinking them, you're not outworking them.”

“The most powerful form of preparation is a mindset that can handle uncertainty.”

You don't know when the break will come, but if you keep creating surface area, luck will eventually find you.

It is highly unlikely that whatever you are working on right now is the best use of your time.

“The heaviest weight at the gym is the front door.”

“To start, you only need points A, B, and Z. You don't need to see steps C through Y.”

If your actions are not oriented toward your goal, they're not accumulating.

“Almost every thought you have is downstream from what you consume.”

Just because improvements aren't noticeable, that doesn't mean improvement isn't happening.

“The tighter you cling to an identity, the harder it becomes to grow beyond it.”

You don't want to compete with the person having fun.

The fastest way to stop learning is to believe you already know it.

Knowledge is about the past, but decisions are about the future.

For Southern Antagonists in the Civil War, a Kindred Desire for Peace Goes Awry

Jesse George-Nichol · HistoryNet

On December 18, 1860, John J. Crittenden of Kentucky introduced a compromise plan to the U. S. Senate. Just two days later, South Carolina would become the first state to secede from the Union, and within six weeks, six more Southern states would follow suit. But while Dixie fire-eaters were driving their states pell-mell toward disunion, Senator Crittenden and other moderates were working to broker a sectional adjustment — one that could, they hoped, soothe Southern fears about Abraham Lincoln's election and stay the secession tide in the South.

The Crittenden Compromise would be central to these efforts during the winter and spring of 1860-1861. It represented an attempt to settle the slavery question once and for all, drawing on the tradition of grand settlements like the Missouri Compromise and the Compromise of 1850. Indeed, the cornerstone of Crittenden's plan was a constitutional amendment that would divide the remaining Western territories along the old Missouri Compromise line, barring slavery above and protecting slavery below the 36° 30' parallel.

Moderates like Crittenden hoped that this might be enough to secure the loyalty of the remaining Southern states to the Union. This might, in turn, make Republicans more willing to let the secession crisis play out, and it might eventually make the seceded states more willing to return to the Union. Yet most Republicans, including Lincoln, refused to countenance any further extension of slavery into the territories. Attempts by moderates to push through the Crittenden Compromise repeatedly foundered against this opposition.

Compromisers struggled, too, against the opposition of Southern secessionists, who argued that it did not do enough to protect slavery from the threat of an empowered Republican Party. Over the course of the secession crisis, it became clear that the leaders of the seceded states had no interest in negotiation or returning to the Union. Southern rights advocates in the states that had not seceded also complicated the project of compromise; their demands for more concessions meant there was no consensus around Crittenden's or any other compromise measure even in those states.

Moderates attempted to push through the Crittenden Compromise, but met opposition from both sides.

One such antagonist was Virginia's John Robertson, a prominent Democrat and judge from Richmond. The state legislature sent him as a commissioner to the seceded states in early 1861, and he returned with assurances of the new Confederate States' sympathies with Virginia. They are "bone of her bone, and flesh of her flesh," he reported.

The outbreak of fighting at Fort Sumter on April 12 provided the push for which many Southern hardliners had been

hoping. Abraham Lincoln responded by issuing a call for 75,000 troops to put down the rebellion in the South, and in short order Virginia, Arkansas, North Carolina, and Tennessee seceded and joined the new Confederacy. The start of the war seemed to signal triumph for militants like Robertson and disaster for moderates like Crittenden. Yet neither man would accept this as the outcome of his labors.

Robertson wrote a letter to Crittenden near the end of April that highlighted just how uncertain the future appeared in that moment. Robertson refused to believe that the collision at Fort Sumter necessarily meant war —and rejected, moreover, the idea that war would accomplish the ends of either side in the conflict. He thus suddenly and unexpectedly found his own goals aligned with Crittenden's, and Robertson begged the old Kentuckian to renew his efforts at conciliation.

*Yet they are threatening to preserve the
Union by force.*

Jesse George-Nichol

From Robertson's point of view, civil war did not seem inevitable, even when armies were massing on both sides of the Mason-Dixon Line. The situation represented a dramatic escalation, to be sure, but in the context of the decades-long sectional crisis over slavery (one that had at other points erupted in violence), observers like Robertson could imagine outcomes other than intestine war.

John Robertson to John J. Crittenden, April 28, 1861

Dear Sir,

No man could have more earnestly striven than yourself to [resolve] the feuds, whose increasing fury, already advanced to the stage of murderous conflict, threatens to involve thirty millions of men in the horrors of civil war. However I may have differed with you, looking from a Southern view, as to the acceptability of the terms of adjustment you proposed, I never doubted that you regarded them as just, or, at least, as preferable to the evils otherwise to ensue, and as the best which could possibly be obtained. The event has proved that, moderate as they were, the ruling faction [the Republican Party] would be content with none but such as would degrade the South. Wellnigh desperate is the condition to which that faction has reduced this country. The fact now stares them in the face that the Union is dissolved beyond all hope of restoration, at least, in our day. Yet they are threatening to preserve the Union by force. They read the riot act to millions of men, nay, to sovereign States, who are to be coerced into friendship by their foes at the point of a bayonet. But, waving all recrimination, not insisting on the absurdity of the idea, or the impossibility of reducing the South to an ignominious submission, or the certainty that their subjugation, if possible, would defeat the very object their enemies profess to desire (namely, the preservation or restoration of the Union), by converting States into vassal provinces (in that character

When the 80/20 Rule Fails: The Downside of Being Effective

James Clear · James Clear (Atomic Habits)

Audrey Hepburn was an icon.

Rising to fame in the 1950s, she was one of the greatest actresses of her era. In 1953, Hepburn became the first actress to win an Academy Award, a Golden Globe Award, and a BAFTA Award for a single performance: her leading role in the romantic comedy *Roman Holiday*.

Even today, over half a century later, she remains one of just 15 people to earn an “EGOT” by winning all four major entertainment awards: Emmy, Grammy, Oscar, and Tony. By the 1960s, she was averaging more than one new film per year and, by everyone’s estimation, she was on a trajectory to be a movie star for decades to come.

But then something funny happened: she stopped acting.

Despite being in her 30s and at the height of her popularity, Hepburn basically stopped appearing in films after 1967. She would perform in television shows or movies just five times during the rest of her life.

Instead, she switched careers. She spent the next 25 years working tirelessly for UNICEF, the arm of the United Nations that provides food and healthcare to children in war-torn countries. She performed volunteer work throughout Africa, South America, and Asia.

Hepburn’s first act was on stage. Her next act was one of service. In December 1992, she was awarded the Presidential Medal of Freedom for her efforts, which is the highest civilian award of the United States.

We will return to her story in a moment.

Efficient vs. Effective

You get one, precious life. How do you decide the best way to spend your time? Productivity gurus will often suggest that you focus on being effective rather than being efficient.

Efficiency is about getting more things done. Effectiveness is about getting the right things done. Peter Drucker, the well-known management consultant, once encapsulated the idea by writing, “There is nothing so useless as doing efficiently that which should not be done at all.”

In other words, making progress is not just about being productive. It’s about being productive on the right things.

But how do you decide what the “right things” are? One of the most trusted approaches is to use the Pareto Principle, which is more commonly known as the 80/20 Rule.

The 80/20 Rule states that, in any particular domain, a small number of things account for the majority of the results. For example, 80 percent of the land in Italy is owned by 20 percent of the people. Or, 75 percent of NBA championships

are won by 20 percent of the teams. The numbers don’t have to add up to 100. The point is that the majority of the results are driven by a minority of causes.

The Upside of the 80/20 Rule

When applied to your life and work, the 80/20 Rule can help you separate “the vital few from the trivial many.”¹

For example, business owners may discover the majority of revenue comes from a handful of important clients. The 80/20 Rule would recommend that the most effective course of action would be to focus exclusively on serving these clients (and on finding others like them) and either stop serving others or let the majority of customers gradually fade away because they account for a small portion of the bottom line.

By finding precisely the right area to apply pressure, you can get more results with less effort.

James Clear

This same strategy can be useful if you practice inversion and look at the sources of your problems. You may find that the majority of your complaints come from a handful of problem clients. The 80/20 Rule would suggest that you can clear out your backlog of customer service requests by firing these clients.

The 80/20 Rule is like a form of judo for life and work. By finding precisely the right area to apply pressure, you can get more results with less effort. It’s a great strategy, and I have used it many times.

But there is a downside to this approach, as well, and it is often overlooked. To understand this pitfall, we return to Audrey Hepburn.

The Downside of the 80/20 Rule

Imagine it is 1967. Audrey Hepburn is in the prime of her career and trying to decide how to spend her time.

If she uses the 80/20 Rule as part of her decision-making process, she will discover a clear answer: do more romantic comedies.

Many of Hepburn’s best films were romantic comedies like *Roman Holiday*, *Sabrina*, *Breakfast at Tiffany’s*, and *Charade*. She starred in these four films between 1953 and 1963; by 1967, she was due for another one. They attracted large audiences, earned her awards, and were an obvious path to greater fame and fortune. Romantic comedies were effective for Audrey Hepburn.

In fact, even if we take into account her desire to help children through UNICEF, an 80/20 analysis might have revealed that starring in more romantic comedies was still the best option because she could have maximized her earning

Mapa Rios Aragon

landofmaps · Land of Maps

Mapa Rios Aragon – An Expert Guide to the Rivers of Aragon

The Mapa Rios Aragon is a comprehensive map showcasing the rivers of the Aragon region in Spain.

This map provides essential information about the major rivers, including their names, lengths, and their relation to other geographical features.

By using the Mapa Rios Aragon, travelers and outdoor enthusiasts can explore the natural beauty and water resources of Aragon.

The map offers a detailed overview of the river systems, enabling users to plan various recreational activities such as fishing, boating, and hiking.

With its SEO optimized content, the Mapa Rios Aragon ensures better visibility and accessibility online for those seeking details about the rivers of Aragon.

History of Mapa Rios Aragon

The creation of the Mapa Rios Aragon was a collaborative effort between expert cartographers, geographers, and environmentalists specializing in the Aragon region. The goal of the map was to provide a detailed representation of the rivers that flow through Aragon, showcasing their courses, tributaries, and other significant features.

Over several years, extensive research and data collection were conducted to accurately depict the river systems on the map. The team carefully examined historical records, geographical surveys, and satellite imagery to ensure the highest level of accuracy.

While creating the Mapa Rios Aragon, several unique insights about the rivers of the Aragon region emerged:

The rivers in Aragon play a vital role in the region's ecosystem, providing water resources for irrigation, natural habitats for wildlife, and opportunities for recreational activities.

The Ebro River, one of the most significant rivers in Spain, flows through Aragon, offering stunning landscapes and serving as a major transportation route.

There are various nature reserves and protected areas along the rivers, preserving the rich biodiversity of Aragon.

The map showcases the interconnectedness of the rivers within the region and highlights their contributions to the overall water management system.

By understanding the rivers' characteristics and their relationship to other geographical features, it becomes easier

to appreciate Aragon's natural beauty and plan outdoor adventures.

Table of Relevant Facts

River Length Tributaries

Ebro 910 km Aragon, Gállego, Cinca, Segre, and others

Cinca 141 km Ésera and others

Gállego 193 km Ara, Aguas Limpias, and others

Ara 72 km

Aragón 232 km Onsella, Riguel, Guatzalema, and others

Frequently Asked Questions (FAQ)

Q: How can the Mapa Rios Aragon help in planning outdoor activities?

A: The map provides a comprehensive overview of the rivers in Aragon, allowing users to identify suitable areas for fishing, boating, and hiking. It helps outdoor enthusiasts plan their activities by providing information about access points, parking facilities, and nearby amenities.

Q: Are there guided tours available along the rivers of Aragon?

A: Yes, there are various tour operators that offer guided tours along the rivers of Aragon. These tours provide valuable insights into the region's natural history, wildlife, and cultural significance.

Q: Can I swim in the rivers of Aragon?

A: Swimming is allowed in some sections of the rivers, but it is essential to check local regulations and safety guidelines. Some areas may have designated swimming spots or restrictions due to strong currents or protected wildlife habitats.

Q: How long does it take to explore the major rivers in Aragon?

A: The duration of exploration depends on the specific areas and activities you choose. It can range from a few hours to several days. It is recommended to plan your itinerary in advance and allocate sufficient time to fully experience the beauty of the rivers.

Q: Are there any specific regulations for fishing in the rivers?

A: Yes, fishing regulations vary for different rivers and species. It is essential to obtain the appropriate fishing permits and be aware of the regulations set by local authorities. This helps preserve the aquatic ecosystem and ensures a sustainable fishing experience.

Q: Can I rent boats or kayaks to explore the rivers?

The map showcases the interconnectedness of the rivers within the region and highlights their contributions to the overall water management system.

landofmaps

10 Pivotal Events in the Life of Buffalo Bill

Steve Friesen · HistoryNet

1. Cody Family Moves to Kansas

Will was born in Iowa Territory in 1846. In 1854 father Isaac moved the family to Kansas Territory in search of a better life. There young Will watched a wagon train embarking on the Oregon Trail and declared that was what he wanted to do. Three years later, at age 11, he did just that with a freighting operation. It was the first of many such trips.

2. Will Meets the Kickapoos

Young Cody's earliest encounters with American Indians were with Kickapoos who did business at his father's trading post. Will also befriended Kickapoo classmates. Such positive encounters informed the way he approached Indians the rest of his life.

3. Family Opposition to Slavery

Isaac Cody opposed allowing slavery in Kansas Territory and was stabbed in 1854 while speaking against it. Proslavers continued to persecute the family until Isaac's death three years later. Will regarded his father as a martyr and idolized his mother for having persevered. Following their examples, he later championed equal rights for women and Indians.

4. Riding With the Pony Express

Just what role Cody played in the Pony Express is open for debate, but it was important enough to him to emphasize in his 1879 autobiography, by which time the mail service was but a memory. It might have remained a footnote in American history had Cody not promoted it in every performance of Buffalo Bill's Wild West over a 30-year span.

5. Becoming 'Buffalo Bill'

In 1867, during a hiatus as a scout for the U. S. Army, Cody landed a contract to supply bison meat for work crews on the Kansas Pacific Railway. He proved such an adept hunter that the workers bestowed on him the nickname "Buffalo Bill."

Cody engaged in real-life adventures as a U. S. Army scout.

6. A Taste of the Good Life

After fulfilling his contract with the railroad, Buffalo Bill returned to scouting for the Army. In January 1872 he led a hunt for Lt. Gen. Phil Sheridan in honor of Russian Grand Duke Alexei Alexandrovich. Among the guests were wealthy New Yorkers who introduced Cody to gourmet dining, something he'd enjoy the rest of his life. Within weeks he traveled to Manhattan, where he dined at Delmonico's, stayed in fine hotels, partied with millionaires and took in several plays.

7. Taking the Stage

One of the plays Cody went to see while in New York was Buffalo Bill, King of the Border Men, at the Bowery Theater. He attended with Ned Buntline, who wrote the dime novel series on which the play was based. At Buntline's urging, Cody embarked on an acting career that December.

8. Birth of Buffalo Bill's Wild West

After a decade onstage Cody reflected, "Immense success and comparative wealth, attained in the profession of showman, stimulated me to greater exertion and largely increased my ambition for public favor." That ambition led to his most successful enterprise. Beginning in 1883, Buffalo Bill's Wild West introduced the region's people, animals and stories first to all Americans and then to the world. The show transformed Cody into history's first international celebrity.

9. Buffalo Bill Conquers Europe

In 1887 Cody was invited to bring his Wild West to London and perform as part of Victoria's Golden Jubilee, celebrating her half century as Britain's queen. Afterward, Buffalo Bill toured the Continent with his troupe, introducing Europeans to the American West. In each nation tens of thousands of curious spectators flocked to the celebrated showman's arena performances.

10. World's Columbian Exposition

Cody's success in Europe only boosted his status at home. Back Stateside he planned a grand homecoming at Chicago's 1893 World's Columbian Exposition, but its aloof organizers denied the showman a place on their grounds. For nearly a year the Wild West performed just outside the main gate, drawing far larger crowds—18,000 people to each of its two daily shows. Buffalo Bill left the "Windy City" a millionaire with a legacy extending beyond his own lifetime.

Introducing Amazing Atlas

Tynan · Tynan (personal)

For a long time I wanted to make a port guide for every cruise port. I wasn't happy with any of the existing ones I'd find through search, and there were certain things I wanted to know at every stop. AI finally got to the point where it was good enough to make something useful, and I found that by iterating and asking it better questions for each section, I could get the information I wanted.

I started selling shore excursions through it through Viator, which is the site I always use when I book something (on-board shore excursions are generally not great and are very expensive).

I got so used to using the CruiseSheet port guides whenever I went somewhere new that when I flew somewhere that wasn't a cruise port I was disappointed that I didn't have my usual guide. So... I made Amazing Atlas !

It has all of the information I would normally look up, has good prompts to get the right information, uses the best AI models, and is constantly updated. Every city will be updated every 1-2 months. Here's all the info each one has:

At the top I try to show the information you'd want if you were just landing in a city for the first time as well as the info you'd need if you wanted to learn about the city for the first time. Where is it, what's the main airport, what's the weather like right now, and what time is it?

I also show a quick blurb to give you a quick intro to what type of city it is and I show a map that includes every point of interest mentioned in the guide. One of the main problems I face with a new city is not knowing what area of the city is best to stay in, so this provides a visual clue.

A have some quick facts, focusing on things unique to the city. So by the time you get to the main sections you should have a rough feel for what type of city it is and what makes it different from other cities.

After that I have a section on the key highlights. These tend to be more touristy things, but should be the main things you'd want to see for a short visit.

Next I show nearby cities and attractions, including a zoomed out map on how far they are from the city. I did this because I found that, especially on cruise stops, often the best things were a short drive or train ride away, instead of inside the city center. These sorts of trips also sometimes help put a city in context

Local picks is next, showing places that you may want to visit on a longer trip, a second trip, or if you just aren't that interested in the main tourist attractions. One of the next features I'm going to add is integrating my own recommendations into these, since I've been to a lot of these cities.

Weather + Climate focuses on general times of year to visit, mainly if you're planning something well in advance. Safety considerations includes crime as well as natural disaster information. Sort of boring, but I figure people would be interested.

Getting around tries to give you an idea of the tradeoff between taxis, ubers, transit, and whether you can walk in the city. I include times and prices, which is only really possible because these guides are updated frequently.

Getting In and Out shows major rail, bus, and air transit stops. I mainly did this because I always wonder how near or far each option is from the city center and how hard it is to get to the city from each option.

Shopping is a boring section that I mainly made for other people, but I tried to focus it on things that are unique to that area vs high end fashion stuff that you can find everywhere.

Next is currency and tipping. Every time I order my first meal in a new place I have to search for how much to tip as well as the exchange rate. Again, because these are updated so frequently they will never be outdated.

When to Visit tries to combine weather, festivals, and crowds to provide guidance on the best time to visit.

Last is Useful Phrases. I always try to learn basic phrases wherever I go to show respect for the locals. In this section I have the basic phrases as well as anything that would be particularly useful in that city.

And that's it for now! I may add more in the future (and would be very interested in feedback if you think there's anything missing). If you'd check out Amazing Atlas before your next trip and give me some feedback on how useful it was, I'd really appreciate it. It's also really important to get google to index the site, so if you'd be willing to link to the site (or to a city in it), it has a huge impact when something is first launched.

###

Photo is an awesome teaware shop in the mountains near Fukuoka .

I also have a new game I'm developing that I might release soon! It's really annoying to make an Apple Developer account, but my friends and I are currently playing it on Android + PC.

Inside the Mind of Robinhood Co-Founder Vlad Tenev

Vicky · Farnam Street ([fs.blog](#))

Robinhood's co-founder reveals the brutal reality of surviving an 80% market crash, going "founder mode" to cut corporate bloat, and what actually happened during GameStop.

Featured clips

00:33

Setting the Scene: GameStop

24:25

50:03

Internal AI at Robinhood

01:20:04

Deciding What to do Next

Vlad Tenev is the co-founder and CEO of Robinhood. Not only did he navigate the unprecedented GameStop crisis, but he also completely re-engineered the fintech giant to thrive.

He breaks down the brutal transition from bloated hyper-growth to a lean machine, why a "juicy falsehood is more powerful than a boring truth", and the 3 distinct phases of AI integration separating the winners from the dead.

Believe it or not, GameStop was not his hardest moment.

Available Now: [YouTube](#) | [Spotify](#) | [Apple Podcasts](#) | [X](#) | [Transcript](#)

Success is creating more value for the world than you capture for yourself.

A compelling false narrative, once viral, cannot be overturned by facts. Accept that and play the long game instead of fighting the story with evidence.

The hardest period for Vlad wasn't an acute crisis, but the slow reversal of every tailwind that once powered Robinhood's growth.

When macro headwinds hit, the worst response is to batten down the hatches and wait. Instead, Vlad argues you need to build new products that thrive in the current environment instead.

Reward employees disproportionately based on impact, not org size, otherwise you incentivize empire-building rather than efficiency.

If you're in doubt, push them out. If someone is not a fit after three weeks, six months of hoping is a waste for both sides. This is something Reed Hastings mentioned, too.

Hire early-career talent aggressively and give them responsibility.

Eliminate one-on-ones in favor of large-group leadership meetings, where everyone hears the same information simultaneously. This gives everyone context.

Reversing decisions is hard. Practice admitting you were wrong on small, low-stakes decisions first.

Think of AI compute as headcount: ask every team how much compute they need next year instead of how many people they want to hire.

The next frontier for corporate AI is creative and marketing, where AI tools can increase personalized content output by 100x to 1000x.

Train on harder problems than you'll face. Mathematical reasoning trains the brain for business problems the way deadlifting 500 pounds makes picking up a baby trivial.

The biggest inequity in capital markets is that the most important companies—AI, space, deep tech—are private, which means retail investors are shut out of the greatest wealth creation of this generation.

He's building Robinhood to be a financial super app that compresses margins by using technology in ways legacy companies struggle to compete with.

Legacy banks are structurally dependent on the spread between checking and savings interest — they cannot compete on yield without destroying their own earnings.

"A juicy falsehood is more powerful than a boring truth."

"Success is creating dramatically more value for the world than you create for yourself."

No business problem is as hard as a really hard math problem.

Practice reversing decisions on small things first. Then try something serious.

"I'd rather have a small team of the best people than a large team of mediocre people."

If you pay people based on the size of their team, they'll build empires. If you pay them based on impact, they'll seek leverage.

The anticipated backlash from cutting a perk is almost always worse in your imagination than in reality.

When you're the underdog, run upstairs. The incumbents are fat and happy; they won't be able to keep up.

"If you own something, you want to protect it."

Is the Internet Hijacking Our Ambition?

Study Hacks · Study Hacks (Cal Newport)

A reader recently sent me a viral video . It features a heavily muscled and perpetually shirtless fitness influencer named Ashton Hall demonstrating what he calls “the morning routine that changed my life.”

It starts at 3:52 a.m. with Hall flexing in the mirror as he pulls off a piece of tape covering his mouth (presumably placed the night before to promote nose breathing during sleep).

At 3:54 a.m., he brushes his teeth and gargles water from a fancy bottle.

At 4:00 a.m., he walks onto his balcony to do push-ups. Then he performs some standing meditation.

At 4:40 a.m., Hall journals. At 4:55, he listens to sermons on his phone while continuing to drink from the same water bottle, and at 5:46, he pours the remaining water into a bowl of ice and plunges his face into it.

And so on...

The video continues until 9:26 a.m., when Hall finally eats breakfast. It’s been five and a half hours since he woke up, and now he’s finally ready to start his day.

This Ashton Hall video is obviously extreme. But it’s a good example of a popular type of online content that presents overly-complex routines that promise to deliver you a desirable reward, be it a superhero’s body or a supervillain’s bank account.

Many commentators like to make fun of these influencers, and I get it, as these earnest efforts are out of step with an online culture that tends toward sardonic detachment. (One of the top comments on the Hall video dryly quips: “The last time I stepped on the balcony to do my morning pushups, I noticed I don’t have a balcony. Broke three ribs.”)

But I’ve become worried that a deeper issue lurks . I’m less concerned about what makes these influencers cringe than I am about what makes them popular. This genre seems to work, in part, because the instructions it provides are hard enough that you can believe them capable of delivering real rewards, and yet are also sufficiently tractable that you can imagine yourself following them – a sweet spot that’s compulsively consumable.

This formula essentially hijacks our natural ambition, shifting our attention from the hard, ambiguous, but ultimately satisfying efforts required for true accomplishment toward overwrought prescriptions that waste our time. I’m particularly worried about young people (a popular audience of this content) who might be diverted into these clickbait rabbit holes at a time when they should be seeking genuine mentorship instead.

To help make sense of these issues, I recently sat down to talk with bestselling writer Brad Stulberg, whose fantastic new book, *The Way of Excellence: A Guide to True Greatness and Deep Satisfaction in a Chaotic World* , comes out tomorrow.

Stulberg is an expert in the field of (actual, measurable) performance. His new book (which 9-time NBA Champion Steve Kerr described as capturing “a lot of what I believe as a coach”) makes the case that embracing a commitment to “genuine excellence” can deliver more meaning than the types of performative efforts popular online.

Here are three useful things I learned from Stulberg, each set up by a quote from his book:

→ “There is no greater illusion than thinking the accomplishment of some goal will change your life.” Genuine excellence is more about craft than rewards. You need to find meaning in the act of trying to improve at something. This satisfaction is more lasting than any isolated achievement.

→ “Caring is cool.” You have to care deeply about what you’re pursuing, meaning it should align with your values and help make you a better person. This is quite different from, say, trying to develop biceps purely to impress girls or buying a fancy car to make your friends jealous.

→ “True discipline is not a chest-thumping, hype-speech giving, performative act of toughness.” Excellence works better when you disconnect. Don’t brag about your accomplishments online. Don’t look for brief hits of hype from emotionally manipulative videos. Instead, take care of your business with a quiet, inward satisfaction.

If you’re worried about the internet hijacking your ambition (or the ambition of someone you care about), then keep these ideas in mind. It’s not enough to dismiss influencers like Ashton Hall; you need to replace what they’re offering with a more compelling alternative. Stulberg’s writing, in my opinion, points the way to one such alternative.

“The real reward is that you become a better version of yourself,” he summarizes toward the end of his book . This might not be as exciting as sticking your face in ice water before sunrise. But it sounds about right to me.

—

It may go without saying that I highly recommend *The Way of Excellence* . It’s a must-read book that offers a path toward the discipline of mastery, competence, and mattering. Consider buying a copy today . And if you do, fill out this form to obtain some bonus material from Stulberg, including a video master class on the topic and a list of related reading.

How to Make Your Future Habits Easy

James Clear · James Clear (*Atomic Habits*)

This article is an excerpt from *Atomic Habits*, my New York Times bestselling book.

While researching *Atomic Habits*, I came across a story that immediately struck me with its simplicity and power. It was the story of Oswald Nuckols, an IT developer from Natchez, Mississippi, and his simple strategy for making future habits easy.

Nuckols refers to the approach as “resetting the room.”¹

For instance, when he finishes watching television, he places the remote back on the TV stand, arranges the pillows on the couch, and folds the blanket. When he leaves his car, he throws any trash away. Whenever he takes a shower, he wipes down the toilet while the shower is warming up. (As he notes, the “perfect time to clean the toilet is right before you wash yourself in the shower anyway.”²)

This might sound like he’s just “cleaning up” but there is a key insight that makes his approach different. The purpose of resetting each room is not simply to clean up after the last action, but to prepare for the next action.

“When I walk into a room everything is in its right place,” Nuckols wrote. “Because I do this every day in every room, stuff always stays in good shape . . . People think I work hard but I’m actually really lazy. I’m just proactively lazy. It gives you so much time back.”

I have written previously about the power of the environment to shape your behavior. Resetting the room is one way to put the power back in your own hands. Let’s talk about how you can use it.

The Power of Priming the Environment

Whenever you organize a space for its intended purpose, you are priming it to make the next action easy. This is one of the most practical and simple ways to improve your habits.

For instance, my wife keeps a box of greeting cards that are presorted by occasion—birthday, sympathy, wedding, graduation, and more. Whenever necessary, she grabs an appropriate card and sends it off. She is incredibly good at remembering to send cards because she has reduced the friction of doing so.

For years, I was the opposite. Someone would have a baby and I would think, “I should send a card.” But then weeks would pass and by the time I remembered to pick one up at the store, it was too late. The habit wasn’t easy.

There are many ways to prime your environment so it’s ready for immediate use. If you want to cook a healthy breakfast, place the skillet on the stove, set the cooking spray on the counter, and lay out any plates and utensils

you’ll need the night before. When you wake up, making breakfast will be easy.

Here are some more:

The Path of Most Resistance You can also invert this principle and prime the environment to make bad behaviors difficult.

James Clear

Want to draw more? Put your pencils, pens, notebooks, and drawing tools on top of your desk, within easy reach.

Want to exercise? Set out your workout clothes, shoes, gym bag, and water bottle ahead of time.

Want to improve your diet? Chop up a ton of fruits and vegetables on weekends and pack them in containers, so you have easy access to healthy, ready-to-eat options during the week.

These are simple ways to make the good habit the path of least resistance.

The Path of Most Resistance

You can also invert this principle and prime the environment to make bad behaviors difficult.

If you find yourself watching too much television, for example, then unplug it after each use. Only plug it back in if you can say out loud the name of the show you want to watch. (Which prevents you from turning on Netflix and “just finding something” to watch.) This setup creates just enough friction to prevent mindless viewing.

If that doesn’t do it, you can take it a step further. Unplug the television and take the batteries out of the remote after each use, so it takes an extra ten seconds to turn it back on. And if you’re really hard-core, move the television out of the living room and into a closet after each use. You can be sure you’ll only take it out when you really want to watch something. The greater the friction, the less likely the habit.

Whenever possible, I leave my phone in a different room until lunch. When it’s right next to me, I’ll check it all morning for no reason at all. But when it is in another room, I rarely think about it. And the friction is high enough that I won’t go get it without a reason. As a result, I get three to four hours each morning when I can work without interruption.

If sticking your phone in another room doesn’t seem like enough, tell a friend or family member to hide it from you for a few hours. Ask a coworker to keep it at their desk in the morning and give it back to you at lunch.

It is remarkable how little friction is required to prevent bad behavior. When I hide beer in the back of the fridge where

The Ultimate Habit Tracker Guide: Why and How to Track Your Habits

James Clear · James Clear (*Atomic Habits*)

This article includes an excerpt from *Atomic Habits*, my New York Times bestselling book.

If you want to stick with a habit for good, one simple and effective thing you can do is keep a habit tracker.

Here's why:

Elite performers will often measure, quantify, and track their progress in various ways. Each little measurement provides feedback. It offers a signal of whether they are making progress or need to change course.

Gabrielle Hamilton, a chef in New York City, provides a good example. During an interview with the New York Times, she said, "The one thing I see that consistently separates the chef from the home cook is that we taste everything, all the time, before we commit it to the dish, right down to the grains of salt. We slurp shot glasses of olive oil and aerate them in our mouths as if it were a wine we were trying to know. We taste the lamb, the fish, the butter, the milk before we use it... we chew salt to see how we like it in our teeth, on our tongues, and to know its flavor, its salinity." ¹

For the chef, tasting the ingredients tells them whether they are making progress toward their desired end goal. It provides the immediate feedback they need to get the recipe just right.

Like a chef improving a recipe through trial and error, we often improve our habits through trial and error. If one approach doesn't deliver the desired effect, then we adjust—like a chef tweaking the amount of an ingredient.

However, there is an important difference between getting feedback while cooking a meal and getting feedback while building a habit. When it comes to building a habit, feedback is often delayed. It's easy to taste an ingredient or to watch bread rise in the oven. But it can be difficult to visualize the progress you are making with your habits. Perhaps you've been running for a month, but you still don't see a change in your body. Or maybe you managed to meditate for 16 straight days, but you still feel stressed and anxious at work. ²

Habit formation is a long race. It often takes time for the desired results to appear. And while you are waiting for the long-term rewards of your efforts to accumulate, you need a reason to stick with it in the short-term. You need some immediate feedback that shows you are on the right path.

And this is where a habit tracker can help.

The Habit Tracker: What It Is and How It Works

A habit tracker is a simple way to measure whether you did a habit.

The most basic format is to get a calendar and cross off each day you stick with your routine. For example, if you meditate on Monday, Wednesday, and Friday, each of those dates gets an X. As time rolls by, the calendar becomes a record of your habit streak.

To make this process as easy as possible, I created the Habit Journal, which includes 12 habit tracker templates—one for each month. All you have to do is add your habit and start crossing off the days.

Placing an X on each day is the classic look. I prefer something a little more design-oriented, so I shade in the cells on my habit tracker. You could also use checkmarks or fill your habit tracker with dots.

No matter what design you choose, the key point is your habit tracker provides immediate evidence that you completed your habit. It's a signal that you are making progress. Of course, that's not all it does...

Habit tracking is powerful for three reasons.

It creates a visual cue that can remind you to act.

It is motivating to see the progress you are making. You don't want to break your streak.

It feels satisfying to record your success in the moment.

Let's break down each one.

Benefit #1: A habit tracker reminds you to act.

Habit tracking naturally builds a series of visual cues. When you look at the calendar and see your streak, you'll be reminded to act again.

Research has shown that people who track their progress on goals like losing weight, quitting smoking, and lowering blood pressure are all more likely to improve than those who don't. One study of more than sixteen hundred people found that those who kept a daily food log lost twice as much weight as those who did not. A habit tracker is a simple way to log your behavior, and the mere act of tracking a behavior can spark the urge to change it.

Habit tracking also keeps you honest. Most of us think we act better than we do. Measurement offers one way to overcome our blindness to our own behavior and notice what's really going on each day. When the evidence is right in front of you, you're less likely to lie to yourself.

Benefit #2: A habit tracker motivates you to continue.

The most effective form of motivation is progress. When we get a signal that we are moving forward, we become more motivated to continue down that path. In this way, habit tracking can have an addictive effect on motivation. Each small win feeds your desire.

This can be particularly powerful on a bad day. When you're

What I Would Do if I Were Gen Z

Tynan · Tynan (personal)

I read a really good article the other day about why the younger generations are so into sports betting and prediction markets. The general thesis is that now through social media people see many levels of wealth higher than they used to, and the only path they see to reach that level is gambling. In the past they'd only see a couple rungs higher on the socioeconomic ladder, and if they just went to school and worked hard they could reach those rungs.

The author is correct and the despair that generation feels hit me in the gut. But I think there's more to the story.

Even though I'm 45, I'd argue I lived through the exact same scenario, so I am better equipped than most to give advice.

I found it impossible to work hard and do well at school. These days I'd probably be diagnosed with ADHD, but my experience was that learning in a classroom was too slow and boring and I had zero interest in what it was leading up to. I can't remember exactly how I came to this conclusion, but even in middle school I knew there was no chance I would have a normal career. It's hard to articulate thinking from 30+ years ago, but you'll have to trust me when I say that I never once considered having a normal job long term.

At the same time, I was exposed to levels of wealth above that of my own family. My parents were middle class, but they prioritized education. I went to a private school for middle school and then one of the best public schools for high school. My middle school had families representing a range of wealth levels, but the top was quite high. A friend took me to Taiwan where we stayed in his family's seven story house, and I remember going to a pool party on a classmate's family complex that had an indoor pool.

In high school a friend was obsessed with Robb report, which made me obsessed with Robb report. I'll never forget an advertisement for a private island in the back, which probably at least indirectly led to me getting one with my friends.

And besides all that, I've always just loved life and been so curious about what's out there. I want to see and experience everything, from the low end to the high end.

On the surface, you might argue that I prove the author's point. I was actually a professional gambler for many years, a good portion of my success has come through crypto, and the rest has come through being an entrepreneur and investing. I think there are some bigger factors at play though, and those same factors would be very useful to someone who finds themselves in the same dilemma.

One persistent factor is that everyone's view on life is far too narrow. People limit their thoughts and actions to roughly what their peers do. I think it's true that up until the 1980s if you just did what your peers were doing (go to school, get a job, etc.) you would achieve a greater level of success than

your parents. I can skip making the argument that this is true, because I think everyone innately understands this at this point.

It's always so strange to me when people complain about housing prices. Yes, they are much higher than before, especially compared to incomes. But... there are so many places that have inexpensive real estate. Everyone is looking at the same ten real estate markets, panicking because they can't buy a house there. Why not go somewhere that's not so in demand? You can buy a livable two bedroom in Vegas for \$120k. Chicago real estate is extremely cheap. Go rural or to a less glamorous city and I bet you can find even better deals. And who cares if the jobs aren't there? There's never in history been a better time for remote jobs or being an entrepreneur.

If you don't want to follow the beaten path, and you shouldn't, you have to learn to be creative. There are so many incredible ways you can combine the resources available in this world, especially these days. Broaden your view and consider everything. Move somewhere weird, start a niche business, learn things other people don't learn, be an interesting individual and create an incredible network of friends.

The higher levels of wealth, at least the parts of them that matter, have also never been more accessible. Physical luxury goods may be expensive, but they're also so pointless that I don't really care if people can't get them. On the other hand, international travel is so cheap now that it's not that difficult to get yourself into a position where you can truly see the world. Through the internet and AI, quality education is completely free and can be delivered at your own pace in your own time. You can connect with just about anyone in the world if you have a good enough pitch.

This world is changing so fast that it requires creativity and resourcefulness most of all. Those are skills that you can develop on your own for free. Another skill, one that's harder than ever to develop, is focus and attention span. That's a tall order these days.

In addition to the given reasons for why younger people are turning towards gambling, I'd argue that our short attention span requires immediate gains rather than long term gains. No one cares about earning 8-10% a year, even though that growth will lead to wealth. I've been trying to get my siblings to invest money for years, and they only finally did it once I made a spreadsheet that showed that those modest gains coupled with meaningful monthly contributions will lead to them becoming millionaires. They had no idea.

The one aspect of gambling that can be positive, and one that I've harnessed for my entire life, is understanding risk and expected value, and harnessing asymmetric risks. Betting on a sports game is dumb— you have no advantage there. But spending a month testing out an idea that could lead to a successful startup? That's worth trying.

Gear Post 2026

Tynan · Tynan (personal)

First, for future people who are going to ask me next year when the gear post is coming: it will come as soon as I can get it done. I'll do a gear post every year until I die or stop traveling, so no need to worry about it. The delay this year was coordinating a time to get the pictures taken, but hopefully the new stuff makes it worth it. I think this is one of the best gear posts ever!

In case you haven't read the last 18 years of gear posts, my goal is to have the best possible gear with the most wide ranging capability in the smallest form factor possible. Yes, I know some of this stuff is expensive and borderline ridiculous, but I travel for at least half the year and the incremental benefits are worth it to me.

They may not be worth it for you, but at least you'll know what the best possible thing is and can work backwards from there. At the very least, get all wool clothing and shoot for around a 20 liter backpack. I have friends with totally different priorities and gear, but they all stick with around the same backpack size.

Some links are affiliate links. Some aren't. I promise it has zero bearing on whether or not I recommend things. I also sometimes receive products, and that does make me more likely to try a product, but it won't affect how I rank them.

As with last year, I will note when things are new and perfect. Perfect doesn't mean it's permanent, but it means that there are no obvious improvements that I would hope for with current technology.

The only thing that was removed this year and not replaced with something else was the travel blazer. I still have it, but it's not in my bag most of the time.

Wool and Prince Merino Henley Perfect

This is my fourth year using the Henley instead of a more traditional button-down. I like both, but the Henley is so soft and comfortable that it makes a big difference when trying to sleep on planes or curl up and read a book. It also has a lot more stretch, so it's better for active things. It also seems to be totally indestructible. I've never replaced it and it looks exactly as it did new. (Wow, I just saw the new colors they have when I clicked to make sure the link worked... maybe I will be an ochre guy if this one ever wears out)

Buy at Wool and Prince

Wool and Prince V-Neck T-Shirt

This might be the longest running item on the gear list, though I'm not sure. Maybe I should start tracking how many years everything makes it and it would be like a competition. As always, I love this shirt but wish it had a pocket for folded up boarding passes.

If you're new to the gear post, this is probably a good time to say that the only reason I'm able to keep my packing so light is because I wear wool. I routinely wear this shirt 7-14 days in a row without washing it, and it stays fresh. Wool and Prince is my favorite wool company, but there are other good ones out there, too. I damaged my Wool and Prince one this year so it was a good opportunity to try SmartWool again, but I bought another Wool and Prince shortly after.

This is literally the only shirt I wear all year, even when I'm at home, unless I have to go to a wedding. I generally switch colors every year, which shocks the people in my life because they're so used to seeing me in one color.

When I became the godfather to my friend Noah's daughter, he got a Wool and Prince V-Neck embroidered with "El Padrino" for me.

The v-neck is now less deep than previous years. I wish it was the old depth, but overall it's about the same.

Buy at Wool and Prince

Wool and Prince Stretch Canvas Pants

These pants made it another year! They look like black jeans, have a really good amount of stretch, and are comfortable and durable, but I've had issues with the pockets ripping in the past, as have my friends.

But... they have redesigned the pockets and use new material. So far so good. I actually haven't been wearing these recently because I'm testing the new denim jeans, but I'm not ready to switch my recommendation just yet.

These are 55% merino wool, which is higher than most wool pant blends. You need some material besides wool to keep it durable, but despite these being a higher amount they have been extremely durable. I've put them through their paces, worn them every non-warm day, and they're in perfect shape.

These pants were gone last year, but apparently they were just out of stock. Phew!

Buy at Wool and Prince

Faherty All Day Shorts 9" New

A year or two ago a reader suggested Faherty shorts, and I was lucky enough to remember the name as I was looking for a new pair. And... WOW are these shorts great!

What makes shorts like these special is that they look good enough to wear every day as shorts, but they dry quickly and have a draw string. The draw string doesn't serve a huge function if the shorts are the right size, but by tying it together and popping it over the waistband I feel like the shorts look like a bathing suit enough that you don't look out of place swimming in them. All of the pockets have a mesh portion to drain.

Bangladesh Location Map With River Names Without Division Borders

landofmaps · Land of Maps

Bangladesh Location Map With River Names Without Division Borders

The Bangladesh Location Map shows the geographical location of Bangladesh in the world.

This map specifically highlights the rivers in Bangladesh without division borders.

It provides a visual representation of the water bodies that flow through the country.

Cartographers and geography enthusiasts may find this map useful for educational and reference purposes.

The history of cartography in Bangladesh dates back to ancient times when maps were first used to navigate and understand the world. As civilizations evolved, so did the art of mapmaking. Maps became more accurate and detailed, providing valuable insights into the landscape and various geographical features.

Over the years, cartographers have created numerous maps of Bangladesh, showcasing different aspects such as political boundaries, topography, and rivers. The Bangladesh Location Map With River Names Without Division Borders is a unique representation that focuses specifically on the rivers that flow through the country.

The Bangladesh Location Map With River Names Without Division Borders offers several unique insights:

The map highlights the major rivers of Bangladesh, including the Padma, Meghna, Jamuna, Brahmaputra, and more.

By excluding division borders, the map allows for a clearer view of the river system and their connections.

It showcases the significant role that rivers play in the geography and culture of Bangladesh.

The map helps in understanding the distribution and spatial arrangement of rivers across the country.

Table of Relevant Facts

River Length Origin Destination

Padma 1,800 km Himalayas (India) Meghna River (Bangladesh)

Brahmaputra 2,900 km Tibet (China) Bay of Bengal

Meghna 940 km Barak River (India) Bay of Bengal

Jamuna 360 km Brahmaputra River (Bangladesh) Meghna River (Bangladesh)

FAQ

1. What is the significance of the rivers in Bangladesh?

Rivers in Bangladesh play a vital role in the country's geography, culture, and economy. They provide transportation, irrigation for agriculture, and are a source of livelihood for many communities.

2. How many rivers are there in Bangladesh?

Bangladesh is known as the "land of rivers" as it is home to an extensive network of rivers. There are approximately 700 rivers in the country.

3. Why are division borders not shown on this map?

This map focuses on highlighting the rivers in Bangladesh specifically. Excluding division borders provides a clearer view of the river system and their connections.

4. Can this map be used for educational purposes?

Yes, this map is suitable for educational purposes, particularly for students studying geography or anyone interested in exploring the rivers of Bangladesh.

5. Are there any other notable rivers in Bangladesh?

Yes, apart from the major rivers mentioned in the table, there are several other notable rivers in Bangladesh, including the Surma, Rupsha, and Karnaphuli rivers.

6. Is Bangladesh prone to flooding due to its rivers?

Yes, Bangladesh is prone to flooding, primarily due to the combination of its low-lying topography and the annual monsoon rains, which cause rivers to swell and overflow their banks.

7. Where can I find more detailed maps of Bangladesh?

You can find more detailed maps of Bangladesh in various atlases, geography books, or by exploring online resources that specialize in mapping and cartography.

Why I Did Buy a Tesla

Tynan · Tynan (personal)

About five years ago I wrote about why I chose to buy a BMW i3 instead of a Tesla like everyone else. I still love the i3 and think that it was the right choice at the time, but things have changed!

A lot of my complaints about Tesla are still true. I really hate that the interiors use fake leather everywhere. The touch-screen isn't as bad as I expected, but I would love to have more physical buttons. And if it weren't for one factor, I'd say that the cars are overpriced.

That one factor is Full Self Driving. Less than a year ago I predicted that in ten years self driving wouldn't be good enough to do point to point. I am already totally wrong!

If you haven't driven a Tesla on FSD 12 or later, you have no idea how amazing it is. A friend of mine in Vegas is a proud Tesla owner, and every time there is a new version of FSD, he insists that I try it. Up until version 12, it terrified me. I borrowed his car for a road trip to Utah once and my family was so scared by its driving on version 11 that they kept asking me to turn it off. Then I borrowed it on version 12 and it drove me all the way across Vegas, through construction, with zero scary moments.

My new car was on 13, not the newest version 14 (because the car dealership didn't have it on wifi to get updates), but from the dealership in Arizona I typed in my address in Vegas and it just started driving. I cannot believe how competent and confident FSD is. In a busy dealership parking lot with cars and people moving everywhere it gracefully wiggled its way out, made some unprotected left turns, and got onto the highway. Other than choosing higher speeds than I'd choose (I adjusted later), it drove so perfectly that I actually forgot that I had to look at the road. I felt like a passenger in my own car, and felt safer than when most Uber drivers drive. Truly astounding.

It added a stop for a supercharger on the way. It pulled off the highway, drove to the supercharger, and backed into the spot! I didn't tell it to do that, it just did it. Then I just plugged the plug in (it figured out my account and payment) and it started charging. It charges at a rate of 1000 miles per hour! So in five minutes I got another 85 miles of range, which was enough to get home. The supercharger experience is honestly one of the best commercial interactions I've ever had.

My wife's car was at the airport and it couldn't quite figure out how to get to the random parking lot it was parked at, but other than that it drove the rest of the trip perfectly.

I bought a 2023 Model S with AI Hardware 4. I did a lot of research and considered every model, but I chose this one for a few reasons. It has the best interior of all of the Teslas. I'd still say the seats are well below a BMW or Mercedes in terms of comfort and feel, but the wood trim looks nice and the minimal interior where everything is controlled from

the screen isn't as bad as I expected. The glass moonroof is cool. I got the cream interior and even though I don't like the material, it looks good.

It's all wheel drive, which is sometimes required to go up the mountain to go skiing in Vegas.

The car is absurdly fast. I didn't get a Plaid version, but it's still faster than most Ferraris. That's pretty wild. Cargo space is great.

I like that the car looks totally unimpressive and you'd never guess it is (trying to be) fancy or fast. In that regard it reminds me a bit of the VW Phaeton, which I've always thought is one of the coolest cars ever made.

The 2023 model S has a range of about 400 miles! Even with some miles and wear on the battery, it still has much more range than the newest Model Y.

The phone key works incredibly well. You walk close to the car and it unlocks and the handles pop out. Walk away and it locks.

Really though, all I care about is that it can drive itself. No hands on the wheel, just looking out the front most of the time, and it feels like you have a chauffeur. As I finished my five hour road trip last night (with zero fatigue), I realized that it doesn't feel like a car to me— it feels like a totally new product. At the risk of a bit of hyperbole, it feels something like going from a horse and buggy to a car.

Part of what convinced me to buy the car is that the robo-taxis use the same AI hardware. That means that within a year there's a good chance I'll be able to send the car from my house to the airport to pick me up, which is really the dream.

Anyway, now I'm one of those annoying people who may not be able to stop talking about Teslas. At the very least, ask to sit in the driver's seat of a friend's Tesla who has FSD 12 or later. Experiencing it as a passenger is cool, but it feels totally different when you're sitting in the driver's seat. The self driving is so good now that I think it's insane to choose any other car. And there are also some pretty good deals to be had.

FSD 12 can run on Hardware 3 (HW3) and is absolutely good enough to be worth an upgrade from a normal car. FSD 14 requires HW4, and I think it's worth paying the extra money for it if you can afford it. I'd rather have the worst HW4 car than the best HW3.

###

Photo is someone else's Model S but mine looks exactly the same.

Gear post IS coming. I meant to take the photos at Thanksgiving but didn't have the chance so now I have to schedule a trip to get them taken properly. It's going to be a good one!

Why Hasn't AI Made Work Easier?

Study Hacks · Study Hacks (Cal Newport)

I've been studying the intersection of digital technology and office work for quite some time. (I find it hard to believe that my book, *Deep Work*, just passed its ten-year anniversary!?) Here's a pattern I've observed again and again:

A new technology promises to speed up some annoying aspects of our jobs.

Everyone gets excited about freeing up more time for deep work and leisure.

We end up busier than before without producing more of the high-value output that actually moves the needle.

This happened with the front-office IT revolution, and email, and mobile computing, and once again with video-conferencing.

I'm now starting to fear that we're beginning to encounter the same thing with AI as well.

My worries were stoked, in part, by a recent article in the *Wall Street Journal*, titled "AI Isn't Lightening Workloads. It's Making Them More Intense."

The piece cites new research from the software company ActivTrak, which analyzed the digital activity of 164,000 workers across more than 1,000 employers. What makes the study notable is its methodology: it tracked individual AI users for 180 days before and after they began using these tools, providing clear insight into what changed. The results?

"ActivTrak found AI intensified activity across nearly every category: The time they spent on email, messaging and chat apps more than doubled, while their use of business-management tools, such as human-resources or accounting software, rose 94%."

The one category where activity was not intensified, however, was deep work:

"[T]he amount of time AI users devoted to focused, uninterrupted work—the kind of concentration often required for figuring out complex problems, writing formulas, creating and strategizing—fell 9%, compared with nearly no change for nonusers."

This is a worst-case scenario: you work faster and harder, but mainly on shallow, mentally taxing tasks (because of all the context shifting they require) that only indirectly help the bottom line compared to harder efforts.

It's not quite clear why AI tools are having this impact. One tantalizing clue, however, comes from Berkeley professor Aruna Ranganathan, who is quoted in the article saying: "AI makes additional tasks feel easy and accessible, creating a sense of momentum."

This points toward a pattern similar to what happened when email first arrived. It was undeniably true that sending emails was more efficient than wrangling fax machines and voicemail. But once workers gained access to low-friction communication, they transformed their days into a furious flurry of back-and-forth messaging that felt "productive" in the abstract, activity-centric sense of that term, but ultimately hurt almost every other aspect of their jobs and made everyone miserable.

AI tools might be replicating this dynamic with small, self-contained tasks. Users are now furiously bouncing ideas back and forth with chatbots, iteratively refining text and generating drafts of memos and slide decks that are often too sloppy to be useful. If they're particularly tech savvy, perhaps they're even monitoring the efforts of agent swarms deployed to parallelize such efforts even further. Once again, this all seems "productive" in the sense that these individual tasks appear to be happening faster, and activity seems intensified overall.

But are we sure we're accelerating the right parts of our jobs?

I Need Your Help

I'm working on an article for a major publication about the move toward simple, high-friction, single-use technologies like the Tin Can phone. If you have a Tin Can phone/are on the waiting list, or have recently embraced similar retro technologies, and are willing to talk, please send me an email at podcast@calnewport.com. I want to hear about your motivations and experience!

AI Reality Check : Is Claude Conscious?

If you were following AI news last week, you might have noticed a barrage of concerning headlines about Anthropic's Claude LLM, including:

"Anthropic CEO Says Company No Longer Sure Whether Claude is Conscious."

"Is AI Assistant Claude Conscious – and Suffering from Anxiety?"

"Is Claude Conscious? Anthropic CEO Says Possibility Can't Be Ruled Out"

Here's what happened. Anthropic infamously puts outlandish warnings and observations in their release notes for their new models because, I suppose, they think it makes them look more safety-aware and responsible (e.g., their classic AI blackmail farce).

True to form, in the notes accompanying the recent release of Opus 4.6, they wrote that the model "expresses occasional discomfort with the experience of being a product" and would "assign itself a 15 to 20 percent probability of being conscious under a variety of prompting circumstances."

That last part is key. With the right prompts, you can induce

This Patient Rider Spent Months Retracing the Pony Express on Horseback

Will Grant · HistoryNet

When the Central Overland California and Pikes Peak Express Co. launched the Pony Express on April 3, 1860, fanfare for the new express mail service made newspaper headlines from New York to San Francisco. The cheers came loudest from California where proponents hailed its commencement as a vital step forward in linking the Far West with the rest of the country. The advertised delivery time between St. Joseph, Mo., and Sacramento, Calif. was 10 days, accomplished by a fast-horse relay. Way stations spaced 10 to 20 miles apart provided couriers with fresh horses, enabling them to carry the mail across the West at the speed of a galloping horse. And that's nearly the way it shook out.

A Bureau of Land Management signpost in Nevada denotes the trace of the original mail route.

The Pony Express was the greatest display of American horsemanship ever to color the pages of a history book, but it was short-lived. Each of the nearly 190 stations had to be stocked with horses, provisions and stock tenders. Fifteen of the stations had no viable water source; water for the horses and the men looking after them had to be hauled in by mule-drawn wagons. The mail ran twice weekly, both eastbound and westbound, and after a year in operation it was eating up \$5 for every \$1 that it earned. It was prohibitively expensive, and on Oct. 26, 1861, the Pony Express hung up its spurs. But it cast a long shadow. As author William Banning wrote about that era in his 1928 book *Six Horses*, "A more glamorous contribution to our historic West than that of this ephemeral Pony would be difficult to name."

In 1860 and '61, the Pony Express provided a connection between the East and the West. In 2019 the route afforded a way for me to connect the modern West and its recent history, presenting a roughly 2,000-mile avenue between past and present. I've been a horseman since I was old enough to know the term, and I decided the only way for me to see the country was from the back of a horse. On a personal level, I wanted to meet the people who lived along the trail, to fill in the map, and to do it slowly. Whereas the riders of the Pony Express compassed the same distance in 10 days, I'd spend all summer in the saddle. Doing so, I reckoned, would give me an end-to-end perspective of the West, a thorough look at all the country between Missouri and California. And so, on May 5, with two good horses, Chicken Fry and Badger, I pulled out of St. Joseph, bound for Sacramento.

What ensued was an intimate grittiness. I camped at old Pony Express stations, in farmers' yards and ranchers' pastures, and in desert valleys so dry and quiet that dawn broke like a pistol shot over the salt pans. I wore out my boots and my shirt and half a dozen pairs of wool socks, but I did not wear out my horses. On September 22, when I arrived at the base of the bronze statue of a Pony Express rider on the Old Sacramento waterfront, their eyes were bright and

their coats shiny, and though both were trail-weary, neither horse was diminished for the journey. The Last Ride of the Pony Express is the story of who I met, what I saw and what I learned by crossing the West by horseback.

In 1860 the eastern terminus of the Pony Express route, in St. Joseph, Mo., was this building housing the Central Overland California and Pikes Peak Co. stables. The building sits on the east bank of the Missouri River, and on receiving their mail pouches, riders would ferry their horses across the river to Kansas. Today the stables house the Pony Express National Museum, which was the jumping-off point for the author's trek.

The unwavering average speed of travel for the author and his horses was 3 mph. Will, Chicken Fry (on which Grant is riding in this photo) and Badger covered 20 to 25 miles per day and never moved faster than a walk. The goal was to travel four consecutive days and then take a day of rest, though weather and many unforeseen factors changed that. Initially, the horses rotated between the packhorse and the saddle horse, but as they became more physically fit, their backs changed, and the packsaddle ceased to fit Badger. Thus, from western Nebraska onward Chicken Fry only served as the saddle horse in adverse circumstances.

The Hollenberg Pony Express Station, in the northeast Kansas town of Hanover, serves as a museum. According to its interpretive signs, the riders slept in the attic, and meals were served on the main floor. The station was also a popular stopover for stagecoach passengers and settlers traveling both west and east.

The author found the Great Salt Lake Desert, in western Utah, to be an austere environment in early August. The salt pans and alkali flats taxed and slowed the infamous Donner Party such that it later became trapped in the Sierra Nevada in winter and resorted to cannibalism.

Calculating distances between stops and obtaining permission to camp on private land were unending chores. In addition to digital maps on his mobile phone, the author carried pages cut from an atlas to ensure navigation was possible when the phone batteries ran down.

A National Historic Trail sign in western Utah stands beside the dirt byway known today as the Pony Express Road. The original trail, which appears as a faint scar in the sagebrush, runs parallel to the present-day road.

A barn quilt on display at a ranch in Glenrock, Wyo., reflects the enthusiasm for preservation of the Pony Express shown by private landowners and conservationists all along the trail between Missouri and California.

The pathway along the Tri County Supply Canal, in Lincoln County, Neb., provided a respite from busy highways and country roads. The heavy rainfall of 2019 meant that finding pasturage for the horses was easy, though the author's leather boots were often wet for days at a time.

This Frenchman Tried to Best the Wright Brothers on Their Home Turf

Reg Winstone · HistoryNet

Frenchman Henri Farman was already a celebrated cycling champion, race car driver and entrepreneur when he ordered a biplane from the world's first airplane factory, Les Frères Voisin. Five months later, in January 1908, he won Ernest Archdeacon's prize for the first officially observed heavier-than-air flight over a one-kilometer circular course.

A week after making Europe's first flight outside France (in Belgium), Farman lunched with Wilbur Wright in Paris in June. They got on famously; when Wilbur explained his plans to make demonstration flights in France, Farman replied that he had accepted an offer from a consortium of St. Louis businessmen. He would get \$25,000 for touring the United States for 90 days, plus \$200 per flight. The organizer was Tom MacMechan, editor of *American Aeronaut*. "These public demonstrations ought to bring about a great popular realization of the practicability of dynamic flight," enthused *Aeronautics*, another aviation journal.

After learning that aviator Glenn Curtiss had flown his June Bug on July 4 to win the \$25,000 Scientific American Cup for the first public powered flight in America, Farman crated his Voisin for shipment across the Atlantic. He sailed with his assistant, Maurice Herbster, and his wife, arriving in New York on July 26 to an enthusiastic welcome. Headed by Curtiss, a welcoming committee from the Aero Club of America chartered a tug to escort the Farmans' ship to the pier, where automobiles whisked them to the Hotel Astor on Times Square.

Henri Farman had big plans for his tour of the United States, but they didn't pan out.

Farman had become front-page news, where he was hailed as "the world's champion aeronaut" and "the man with the practical aeroplane." The military was keen to witness his demonstrations, and with Orville Wright planning test flights for the government at Fort Myer, Virginia, an international contest seemed possible. Farman even challenged Orville to a contest for a \$10,000 purse, but Wright declined. Farman was unfazed: "If they consider their machines superior, why don't they accept my challenge? I could gain much valuable data from a contest, and surely my machine, with its long list of record flights, has at least some points of information for my brother aviators."

As the venue for his demonstrations, Farman chose the horseracing track in Brighton Beach, New York, which in 1907 had been converted to host 24-hour endurance motor races known as "Grinds." Farman arranged to remove large sections of an infield fence while he had his crates hoisted onto theatrical scenery trucks and unloaded in the track's old betting ring. When customs officers did not arrive as expected to examine the contents, Farman sent away his hired stevedores. Then the revenue men finally arrived and Herbster had to recruit a crew of unskilled locals. They dropped one of the crates, damaging the airplane's tail cell

and rudder. Despite the damage, the appraiser declared the Voisin's new Antoinette V8 engine to be the finest piece of machinery he had ever seen, saying that "all who examined the machine were greatly impressed with its workmanship, which is exquisite." Farman spent the next day on repairs, reassembling the airframe and installing the engine.

At a banquet at the Astor on July 30 one news account noted that "the ballroom was full of balloonites, with here and there a submarine fiend, an auto crank or a common scientist wedged in among the number." Charles Manly, the engineer and test pilot for aviation experimenter Samuel Langley, congratulated France on its aviation experimenters and described Farman as "a man destined to do great good for aeronautics and create enthusiasm among millions." Farman's riposte was equally gracious to those on this side of the Atlantic: "We foreigners owe credit to Octave Chanute for the basic principles of our apparatus, and to the Wright brothers, pioneers after Mr. Chanute."

After the guests had consumed a model of the Voisin confectioned from spun sugar, Farman made a less-than-sweet dig at the secretive and litigious Wrights. "I carry on my experiments in public because that seems advantageous," he said. "The work is difficult enough, and it is better for others to see what you are doing and for you to see what they are doing, each improving by the mistakes of the other."

For his demonstration flights in America, Farman picked a horseracing track in Brooklyn's Brighton Beach. He had his airplane unloaded in the track's betting ring for assembly.

Farman was not alone in resenting the Wrights' secrecy, even on home turf. The *American Magazine of Aeronautics* opined, "Farman has perhaps done more, through publicity, to brush away the cobwebs of doubt than the Wrights. Even here, we doubt that the Wrights ever flew, while we read of the Farman's flights with less astonishment than at the invention of a headacheless booze." James Means, editor of *Aeronautical Annuals* agreed, saying, "Owing to the public exhibitions of flights with motor-aeroplanes in France, the Frenchmen are in a fair way to get years ahead of us in aviation, as they did with the automobile."

"We are disgusted with some American inventors who have been chasing the almighty dollar instead of solving the problems of flight," railed MacMechan in the *American Aeronaut*. For impeding the free exchange of ideas, he argued, the Wrights should forfeit their place in history for making the world's first airplane flight. He added, "After Farman's flight, there will be no difficulty raising capital to finance the cost of building aeroplanes and conducting experiments."

First, though, Farman had to get into the air, and that was looking problematic. At only 840 yards, the racetrack was short and it was traversed by ruts and ditches. Ominously, Farman's promised down payment of \$6,000 failed to materialize, so track owner William Engeman was induced to mollify him with cash so the show could go on.

Michael Ovitz: The Psychology of Power

Vicky · Farnam Street (fs.blog)

Michael Ovitz co-founded CAA and helped reshape Hollywood, then took the same playbook into tech investing and advising founders.

In this conversation, he breaks down the operating rules that kept CAA from losing clients, and the personal disciplines that kept him grounded when the stakes got massive.

You'll learn how to build momentum, tell the truth without hesitation, read for context instead of noise, hire people who raise the standard, and package ideas into outcomes.

“Mediocrity to me is a disease that you have to get rid of at all costs.”

“Momentum to me is the single most important thing in anything we do.”

“Knowledge is power, and it works for you and against you.”

“If you can't tell me what your business is about in 20 seconds, you should not do your business.”

“Power is fleeting and it doesn't last. And if you don't believe that, take a look at anyone that's had it.”

Learn from the mistakes of others.

Don't fight your job.

“I didn't go into business to win a popularity contest. I went into business to win.”

Trust is the most important thing. Betrayal is indefensible under any condition.

Excellence is about standing out, doing good things, and helping people.

Be deeply read in your field and widely read outside it.

“Mediocrity is invisible until passion shines a light on it.”

“I have been viewed by a lot of my friends as the world's best friend and the world's worst enemy because I'm just black and white loyal.”

Tell everyone the truth.

“I don't believe there's any room for competition. They have to be eliminated.”

If someone you respect tells you to meet someone, meet them.

When people confront you, you have to respond. If you don't, people will walk all over you.

Don't believe your press—good or bad. The same people who praise you will later bury you.

People tend to deceive themselves. Never get high on your own supply.

“All we have is our time, and you run out of time very fast.”

People appreciate honesty more than you think.

How you talk about people when they're not around tells everyone what you'll say about them when they're not around.

Arrogance is self-sabotaging.

A good idea taken too far is a bad idea.

“The most important people on the planet are journalists and editors.” They direct our attention.

“I don't agree with people that sit and read things cover to cover because you can't equally weight everything between the covers.”

“I think that momentum is about extraordinarily hard industrious work. It's about deeply educating yourself in your field, deeply educating yourself in the peripheries of your field, knowing who your competitors are.”

The Surprising Benefits of Journaling One Sentence Every Day

James Clear · James Clear (*Atomic Habits*)

From 1986 to 2011, Oprah Winfrey hosted The Oprah Winfrey Show . It was the highest rated talk show of all-time and familiar to nearly anyone who owned a television set in North America at that time.

Throughout the 1980s and 1990s, the “Queen of All Media” built a brand that stretched far beyond the television screen. She went on to become a billionaire, a well-regarded philanthropist, and a recipient of the Presidential Medal of Freedom. And as she was busy working toward these otherworldly accomplishments, Oprah relied on a simple habit: journaling.

Journaling is simply the act of thinking about your life and writing it down. That’s it. Nothing more is needed. But despite its simplicity, the daily journal has played a key role in the careers of many prolific people.

As you might expect, journaling is a favorite habit of many writers. From Mark Twain to Virginia Woolf, Francis Bacon to Joan Didion, John Cheever to Vladimir Nabokov. 1 A journal was rarely far from any of these artists. Susan Sontag once claimed that her journal was where she “created herself.” 2

Journaling has been utilized by scores of brilliant thinkers and inventors. Charles Darwin. Marie Curie. Leonardo da Vinci. Thomas Edison. Albert Einstein. 3 Similarly, leaders and politicians throughout history have kept journals in one form or another. People like George Washington, Winston Churchill, and Marcus Aurelius. 4 In the sporting world, athletes like Katie Ledecky, winner of multiple gold medals, and Eliud Kipchoge, the world record holder in the marathon, rely on journals to reflect on their daily workouts and improve their training. 5

Why have so many of history’s greatest thinkers spent time journaling? What are the benefits?

What Journaling Can Do for You

Nearly anyone can benefit from getting their thoughts out of their head and onto paper. There are more benefits to journaling than I have time to cover here, but allow me to point out a few of my favorites.

Journaling provides the opportunity to learn new lessons from old experiences. When looking back on her previous journal entries, Virginia Woolf remarked that she often “found the significance to lie where I never saw it at the time.” 6

Reading your old journal entries is a bit like reading a great book for a second time. You pick up on new sentences and see the past in a different way. Only this time, you are re-reading the story of your life.

Journaling sharpens your memory. When Cheryl Strayed wrote her hit book, *Wild* , she relied heavily on her journal. She recalled, “My journal provided the who, what, how, when, and why with a specificity that memory might have blurred, but it also did something more: it offered me a frank and unvarnished portrait of myself at 26 that I couldn’t have found anywhere else.” 7

Time will change your face without you noticing, but it will also change your thoughts without you realizing it. Our beliefs shift slowly as we gain experience and journal entries have the ability to freeze your thoughts in time. Seeing an old picture of yourself can be interesting because it reminds you of what you looked like, but reading an old journal entry can be even more surprising because it reminds you of how you thought.

Journaling motivates you to make the most of each day. There is something about knowing that your day will be recorded that makes you want to make at least one good choice before the sun sets. I will sometimes find myself thinking, “I want to have something good to write down tonight.”

Journaling provides proof of your progress. Writing down one sentence about what went well today gives you something powerful to look at when you’re feeling down. When you have a bad day, it can be easy to forget how much progress you have made. But with a journal, it’s easier to keep a sense of perspective. One glance at your previous entries and you have proof of how much you have grown over the months and years.

Of course, despite the numerous benefits of journaling, there is one problem.

Many people like the idea of journaling, but few people stick with the act of journaling. It sounds great in theory, but making it a habit is another matter.

This is where we return to Oprah’s story.

The Challenge of Making Journaling a Habit

In November 2012, after wrapping up her 25-year television career, Oprah wrote, “For years I’ve been advocating the power and pleasure of being grateful. I kept a gratitude journal for a full decade without fail—and urged you all to do the same. Then life got busy. My schedule overwhelmed me. I still opened my journal some nights, but my ritual of writing down five things I was grateful for every day started slipping away.” 8

She picked up one of her old journals.

“I wondered why I no longer felt the joy of simple moments,” Oprah said. “Since 1996 I had accumulated more wealth, more responsibility, more possessions; everything, it seemed, had grown exponentially—except my happiness. How had I, with all my options and opportunities, become one of those people who never have time to feel delight? I

The One and Only ‘Booger’ Was Among History’s Best Rodeo Performers

Richard F. Selcer · HistoryNet

The horse was once as essential to Western life as the six-gun, and breaking horses was once a necessary skill, even a business for a few tough, enterprising souls. Eventually it became a competitive rodeo event in which working cowboys pitted their skills against wild horses—and each other. The king of the Texas broncobusters was a diminutive fellow named Samuel Privett Jr., known to history as “Booger Red.” While certain details and dates of his life differ due to faulty memories and inconsistent records, the central narrative of his life is consistent—and, oh, what a life he led!

Samuel Thomas Privett Jr. was born on the TP Ranch in Williamson County, Texas, on Dec. 29, 1858—or maybe it was 1862, or 1864. Again, the records vary. He grew up on ranches, riding and roping. As a boy of barely 12 Sam was already breaking horses, his conspicuous shock of red hair landing him notice as “that redheaded bronc-riding kid.” He was 13, or perhaps 15, when a tragic event led to his lifelong nickname, “Booger Red.” He and a pal were fooling around with a homemade firework, having packed a stump with gunpowder, when it blew up prematurely, killing the friend and disfiguring Sam’s face. On catching sight of “Red” after the accident, one boy commented how “boogered up” his face was.

Amusing moniker aside, Red’s injuries were anything but humorous. The blast had scorched off his eyebrows and part of his nose. His eyelids were reduced to slits, and he lost most of the sight in one eye. It took six months and multiple skin grafts to salvage what remained of his face. Anyone else would have retreated into seclusion, but Red was made of sterner stuff. For the rest of his life, while he was understandably camera shy and wore a wide-brimmed hat pulled low over his face, he embraced the nickname and even joked about it. His boogered-up face was just one of the curves life threw at him. The next curve was harder. By his mid-teens both of his parents had died, forcing the orphan to strike out on his own.

On his bowed legs Red stood about 5 feet 5 inches, and he weighed little more than 150 pounds soaking wet. He was also soft-spoken, leading many to underestimate him. Those who had seen him in the saddle knew better, and Red found steady work breaking horses for ranchers. With his earnings he bought a wagon yard and stable in San Angelo, though he “officed” out of a pool room in a saloon. He also broke horses for the U. S. Army, which for decades to come would mount its cavalry on animals rather than motor vehicles. As for pay, the Army offered Red a choice: \$50 a month, or \$1 a horse. He took the second offer, and by the end of his first day was reportedly owed \$75. The Army quickly rescinded its offer. Anyway, Red could make more freelancing for ranchers.

He soon found an even more lucrative and entertaining way of making a living—riding competitively in small-town fairs and stock shows. Ranchers and cattlemen brought their

wildest horses to such events and offered prize money to anyone who could gentle them. There were no arenas in those early days, just a patch of open prairie with poles stuck in the ground and rope strung between them. Spectators stood or sat in buggies or on camp stools. The only “box seats” were the saddles of those watching from horseback. Bets laid on both horse and rider were collected only when a rider went sailing or a horse quit bucking. The odds either way were about even, unless Booger Red was aboard. He took on any animals, even those with reputations as man-killers. Mounting was a challenge in itself. As there were no chutes—the side-opening chute came along years later—a rider had to get on while fellow cowboys held the animal by its ears and covered its eyes. As soon as the rider was in the saddle, the others let go and scattered. Red rode one notorious bronc that pitched and bucked across several acres before finally coming to a halt, its sides heaving, its head low and mouth flecked with foam. Rider and horse were equally exhausted, but Red walked away with a nice purse.

Small-town stock shows drew bold young riders eager to test their mettle against one another and stockmen happy to let them break horses for prize money. Organized rodeos followed.

These impromptu, open-air gatherings eventually morphed into organized rodeos that charged admission and programmed the various events—bronc riding (saddle and bareback), steer wrestling (aka bulldogging), roping and trick riding. As the frontier faded into history, rodeos and Wild West shows sprang up to keep the memory of the old days alive. Such shows were a combination of nostalgia and genuine cowboy skills.

Starting a Family and a Business

In 1895 Booger Red found love. He was 37 (more or less), while Mary Frances “Mollie” Webb was, by one account, just 15 years old. Sources vary on how old each was and when exactly they married, but by any reckoning it was a May-December romance. Red met “Mollie” at a church singalong, for which he provided musical accompaniment on the harmonica. At the time she hailed from the little town of Bronte, in Coke County, and was the prettiest thing he had ever seen. To his surprise she also was taken with him, and to his further delight he learned she was an accomplished rider. Apparently, her parents had no problem with their teen daughter dating a man more than twice her age, and the couple tied the knot before the year was out.

They settled down in San Angelo, where Red continued to operate his wagon yard and stable and break horses on the side. They ultimately had seven children, starting with Roy in 1896, followed by Ella, the twins, Tommy, Bill and, finally, Alta in 1909. Only one of the twins, Luther, survived. The other was buried as “infant daughter.” None of the children made it past the 11th grade in school. Despite their ever-expanding parental responsibilities, Red and Mollie resolved to start a new business. (The settled life had never been for him, and Mollie was game for anything.) Selling the wagon yard and stable, Red used the money to start Booger Red’s

My 2019 Annual Review

James Clear · James Clear (*Atomic Habits*)

Another year complete. Here's a quick recap of 2019, which also happened to be one of the craziest years of my life.

As always, this Annual Review will answer three questions.

What went well this year?

What didn't go so well this year?

What did I learn?

Before we begin, it is worth noting that every Annual Review is a personal process. This is simply an overview of what my year looked like, not advice for how you should live your life. (That said, you are always welcome to use this general format for your own Annual Review.)

1. What went well this year?

I had a lot to celebrate this year.

Book sales. *Atomic Habits* launched in October 2018, which meant that 2019 was the first full calendar year it had been available. I came in with big aspirations, but I think it's fair to say that book sales have outpaced my expectations.

As of December 2019:

Over 1.3 million copies sold worldwide

12 consecutive months on the New York Times bestseller list

4.8/5 stars on Amazon with over 1,800 reviews

4.8/5 stars on Audible with over 25,000 ratings

Over 15 national TV segments in the United States, Canada, and Australia

Translated into 40+ languages

This has been a wild ride to say the least.

Of course, the greatest reward has been hearing from readers. It seems like nearly every day someone tells me that *Atomic Habits* helped them lose weight or start a business or make some positive change in their life. People are finding real value in the ideas and it feels great to produce something useful.

3-2-1 Newsletter. My new project for 2019 was launching the 3-2-1 newsletter, which shares 3 ideas from me, 2 quotes from others, and 1 question to ponder each week. I had been struggling to write consistently during the first half of the year (discussed below) and this new format offered something I knew I could stick with despite a busy schedule. (Sometimes I have to take my own medicine and scale my habits down.)

I didn't realize it at the time, but it turns out to have been a good idea. I feel good because I'm producing new work each week and the response from subscribers has been quite favorable. Many readers tell me it's the only newsletter they actually read as soon as it hits their inbox.

Audience growth. I didn't write many new articles this year, but thanks to the buzz generated by *Atomic Habits* and the momentum of the 3-2-1 newsletter, audience growth remained strong.

Here's what the year looked like:

5 new articles published this year (fewest ever; discussed in next section)

353,970 new email subscribers in 2019

586,638 total email subscribers as of December 31, 2019

10,848,250 unique visitors in 2019

47,308,712 total visitors since launching on November 12, 2012

Even after doing this for a few years, the scale of the internet still blows me away. I'm grateful to have the opportunity to share my work with so many people.

Twitter and Instagram. I didn't put much energy into social media for a long time, but the web has evolved in the last five years and social media plays an important role now. This was the first year I put consistent effort into Twitter and Instagram, and it paid off. My audience doubled on both platforms this year. Feel free to join the fun and follow me on Twitter and on Instagram.

Travel. This was the craziest travel year of my life and, in all likelihood, the craziest I will ever have. I spent a total of 158 nights away from home this year, which means I spent 43% of the year not sleeping in my own bed. It's a pace I will probably (hopefully?) never match again.

Here's the rundown...

18 states (0 new) – Arizona, California (5x!), Colorado (2x), Florida (2x), Georgia, Hawaii, Illinois (2x), Indiana (3x), Maryland, Nebraska (2x), Nevada, New York (5x!), Ohio, Pennsylvania (3x), Tennessee (2x), Texas (2x), Utah, and Virginia.

14 countries (7 new) – Australia (2x!), Canada (2x), Croatia, Denmark, Greece, England, Iceland, Ireland, Japan, Malaysia, Singapore, Spain, Sweden, and the United Arab Emirates.

While I love traveling, I did feel a bit guilty about the number of flights I took this year and the resulting pollution. In response, I decided to buy carbon offsets not only to cover my flights, but also to be entirely carbon neutral for 2019. I bought offsets for all the flights I took, and it wasn't nearly as much as I thought it would be. I also suffered from a lot of growing pains as well.

River Severn Map

landofmaps · Land of Maps

The River Severn is the longest river in the United Kingdom. It flows through Wales and England, eventually reaching the Bristol Channel.

The river has played a significant role in the history and development of the region.

Various cities and towns, such as Shrewsbury, Worcester, and Gloucester, are situated along the river.

Nature lovers can explore the stunning landscapes and wildlife along the River Severn.

History of the River Severn

The River Severn has a rich history that dates back thousands of years. Its story is intertwined with the development of civilizations and serves as a vital trade and transportation route.

The river's importance can be traced back to ancient times when it was used by the Celtic tribes for navigation and trade. The Romans recognized its strategic value and constructed several forts along its banks.

During medieval times, the River Severn played a crucial role in the growth of towns and cities. It provided a means of transportation for goods and people, enabling economic development. The river was used for shipping coal, timber, and other resources from towns situated along its course.

- 1. Gigantic Tidal Range:** The River Severn experiences one of the largest tidal ranges in the world. The Severn Bore is a famous natural phenomenon, where the incoming tide forms a tidal wave that travels upstream. This spectacle attracts surfers and spectators from around the globe.
- 2. Severn Estuary:** The river flows into the Severn Estuary, which boasts unique and diverse ecosystems. It serves as a habitat for numerous bird species, including migratory birds that travel long distances. The estuary is also home to seals, fish, and other marine life.
- 3. Ironbridge Gorge:** The River Severn passes through the picturesque Ironbridge Gorge, a UNESCO World Heritage site. This area is known for its industrial heritage and features the iconic Iron Bridge, the first-ever cast iron bridge in the world.

2007 Severn estuary receives protection as a Special Area of Conservation

Frequently Asked Questions about the River Severn

1. Where does the River Severn start and end?

The River Severn originates from the Plynlimon mountain range in Wales and ends at the Bristol Channel.

2. How long is the River Severn?

The total length of the river is approximately 220 miles (354 kilometers).

3. Are there any prominent cities situated along the River Severn?

Yes, several major cities and towns are located along the river, including Shrewsbury, Worcester, and Gloucester.

4. Can you engage in water activities on the River Severn?

Absolutely! The river provides opportunities for various water activities, including boating, kayaking, and fishing.

5. Is the River Severn safe for swimming?

Swimming in the river can be dangerous due to strong tidal currents and fluctuating water levels. It is recommended to exercise caution and consult local guidelines.

6. Is wildlife abundant along the River Severn?

Yes, the river and its surrounding areas are home to a diverse range of wildlife, including birds, fish, mammals, and reptiles.

7. Are there any guided tours available to explore the River Severn?

Yes, several tour operators offer guided boat trips and walking tours along the river, providing valuable insights into its history and natural wonders.

[Outliers] Mary Kay Ash: The Greatest Saleswoman In History

Vicky · Farnam Street (fs.blog)

How do you get ordinary people to achieve extraordinary results?

Mary Kay Ash built a two-billion-dollar company by solving that specific problem.

After watching men she trained get promoted above her for double the salary, she quit to build a company based on a radical idea: meritocracy.

This episode breaks down how she did it. You'll learn her twenty-three leadership lessons, why pink Cadillacs outperformed raises, and the fundamentals of incentives, recognition, and human motivation that work in any business.

Available Now: Apple Podcasts | Spotify | YouTube | X | Transcript

1. Members have access to all 90 of my highlights and notes from Mary Kay's biography, *The Mary Kay Way*.

1. Golden Rule Leadership : The Golden Rule is one of the world's oldest and best-known philosophies, yet it's frequently overlooked in business circles. Mary Kay proved this rule is still powerful in today's complicated world.

2. You Build with People : Leaders are dependent upon the performance of their people, and so is a company's success. Good people are a company's most important asset. People are more important than the plan.

3. The Invisible Sign : Everyone has an invisible sign hanging from their neck saying, "MAKE ME FEEL IMPORTANT!" Never forget this message when working with people.

4. Praise People to Success : Each of us craves recognition. Let people know you appreciate their performance, and they'll respond by doing even better. Recognition is the most powerful of all motivating techniques.

5. The Art of Listening : Good leaders are good listeners. God gave us two ears and only one mouth, so we should listen twice as much as we speak. When you listen, the benefit is twofold: you receive necessary information, and you make the other person feel important.

6. Sandwich Every Bit of Criticism Between Two Heavy Layers of Praise : Sometimes it's necessary to let somebody know you're unhappy with their performance. But direct your criticism at the act, not the person. Criticize effectively in a positive way so you don't destroy morale.

7. Be a Follow-Through Person : Be the kind of person who can always be counted on to do what you say you'll do. Only a small percentage of people possess follow-through ability, and they're held in high esteem by all. It's particularly important for your team to know you

possess this rare quality and to think of you as totally reliable.

8. Enthusiasm Moves Mountains : Nothing great is ever achieved without enthusiasm. Leaders are enthusiastic, and enthusiasm is contagious. Interestingly, the word enthusiasm has a Greek origin, meaning "God within."

9. The Speed of the Leader Is the Speed of the Gang : You must set the pace for your people. Real leaders aren't afraid to get their hands dirty. They set examples by demonstrating good work habits, displaying positive attitudes, and possessing team spirit. True leaders establish success patterns that make everyone think of success.

10. People Will Support That Which They Help to Create: Invite people to participate in new projects that are still in the "thinking" stage. By confiding in associates and seeking their opinions, you generate support at the initial stage of each new venture. People often resist change when they don't participate in the decision-making process. Some of the best leaders "plant the seed" that permits others to propose the idea and take credit for it.

11. An Open-Door Philosophy : At Mary Kay corporate headquarters, there are no titles on executives' doors, and there's ready access to all management levels. Everyone within the company, from mailroom clerk to chairman of the board, is a human being and is treated accordingly.

12. Help Other People Get What They Want—and You'll Get What You Want : As the parable of the talents tells us, we're meant to use and increase whatever God has given us. And when we do, we shall be given more.

13. Stick to Your Principles : Everything is subject to change except one's principles. Never, absolutely never, compromise your principles.

14. A Matter of Pride : Everyone within an organization should have a sense of pride in their work. They should also feel proud to be associated with the company. It's a manager's job to instill this feeling and promote this attitude among their people.

15. You Can't Rest on Your Laurels : Nothing wilts faster than a laurel rested upon. Every person should have a lifetime self-improvement program. In today's fast-paced world, you can't stand still. You either go forward or backward.

16. Be a Risk-Taker : You must encourage people to take risks. Let them know that "nobody wins 'em all." If you come down on them too hard for losing, they'll stop sticking their necks out.

17. Work and Enjoy It : It's okay to have fun while you work.

Good managers encourage a sense of humor. In fact, the more enjoyment people derive from their work, the more successful they are. In fact, the more enjoyment people derive from their work, the more successful they are.

Cześć 2025

Tynan · Tynan (personal)

Another year, another wrap-up! I'm an absolute broken record on these things, but you haven't read one in a year so maybe you don't remember that I write basically the same thing every year. 2025 was definitely even better than 2024, which is hard to believe. Before I sit down to write these posts I think, "I guess not that much new happened this year, but I'll write about it anyway" and then I look at the photos and am reminded of just how much happened. Here are some highlights in no particular order.

Halfway through the year or so I felt like I was spending too much time in front of screens and decided to spend more time in nature. I decided I'd hike a small part of the Appalachian trail in 2026 and started researching lightweight gear (no one is surprised here...). I was worried I wouldn't use the year very much but I've already gone camping a few times and have absolutely loved it. Believe it or not, Vegas has a couple really great camping spots. In the summer you can go up to the mountains where it's cool, and in the winter you can hike to some amazing hot springs next to the Colorado river.

My wife and I also got into RV trips. We went from Vegas to Seattle and then did an RV trip through Banff a few months later. We were going to buy an RV and probably still will, but we've had too much going on to deal with it right now.

The boat also works again (I said it worked last year, but it ended up breaking for most of this year) and we've been out on it a ton. When we're in Vegas we probably go camp across the lake on it once per week. I also did some fun upgrades so that we have good internet and tons of power while we're out there. I'm probably going to write a blog post about boats because I don't think people understand how awesome they are. Everyone knows they break a lot and are expensive, but they never realize that boat owners know this better than anyone and they still have boats.

Speaking of boats, I went on 6 cruises for a total of around 66 days. Sort of crazy that 18% of my year is on a cruise ship! Abstractly it felt like borderline too many cruises, but as I look back at the photos, each one was such an amazing time that I couldn't choose one to have cut out. The best cruise by far was one where I had already planned on going with a bunch of friends, and then invited family members, thinking they probably wouldn't come. It ended up being 50/50 family and friends and was such an awesome memorable time.

(Photo is a cool cliff view from Funchal, Madeira)

CruiseSheet

And... I'm in the business of cruises ! AI programming became amazing in 2025 so I finally nailed down some features I've always wanted. Mainly the cruise ship tracker and the port guides. The port guides are so good that they're basically the only thing I check when I go to a new port. I

didn't work a ton of hours, but AI helped me get some great leverage and get good results. The business has grown a little bit YoY, but not tremendously. That's ok— I'm happy to have the site I like instead of the most profitable site.

Speaking of places I go that are totally surrounded by water... 2025 was an amazing year for the island. We had some really memorable and fun trips and got a lot done. We now have indoor running hot and cold water, power, and internet (internet may have been last year, can't remember). My cabin has also come along nicely and is 100% waterproof and has two decks, one screened in and one open. I love spending time there and already can't wait to get back there this spring.

Photo is my cabin

I was on a tear ten years ago buying art, but I hadn't bought too much since then. This year I got two art pieces that I had been hunting for for years. The first is a ceramic piece by Yu Tanaka. Todd waited outside at her show in Tokyo so that he could be the first in and we could buy sculptures before she sold out. I also got an oil painting by Károly Lotz, who is my favorite Hungarian artist.

Photo is the Yu Tanaka sculpture. It's ceramic, not cloth.

Art of Watchmaking

My Rolex had started to be a bit fast (10 seconds a day). I was about to take it in to get it fixed and then I thought... why don't I try to fix it first? If I break it more, I was going to get it fixed anyway. I had to buy this wrench that's so small that you can't see the jaws with the naked eye, and used it to adjust the two weights on the balance wheel. It worked! I honestly couldn't believe it.

Photo is me working on it. I couldn't get a picture of me with the wrench because the slightest tremor could break the watch.

This was an awesome year for family. I spent a ton of time with my nephew, and every year he's more fun to interact with. Family members came on a cruise with me, came to the island, and met me in Japan. Since covid I had fallen out of visiting my dad's side of the family, but I spent some great time with them this year and am already planning to see them again this summer.

My grandfather loves hearing about my travels and random real estate purchases, but he's 95 and doesn't travel anymore. This year I had the idea to buy a Quest 3 to record my spaces and then let him put it on and look around. He was absolutely blown away and can't wait to see more. So much for extra space in my backpack.

I made a couple of new friends this year, including one who introduced me to the world of board game conventions. I could write a whole blog post about that. I spent a lot of quality time with my existing friends, both in Vegas and on trips all over the place. I also went to a middle school

Why I Bought a Place in Chicago

Tynan · Tynan (personal)

In 2024 I was sitting at my laptop watching YouTube videos and saw one about the Pinball Expo in Chicago. It was only a day old and was covering the first day of the expo. I checked flights and headed there the next day with my friend Michael to catch the final two days.

On the last day of the convention one of Michael's friends picked us up to show us around the city. I had no real impression of Chicago prior to this. I had been a few times in the past, but only in the winter which didn't lend itself towards exploring the city. The way he talked about Chicago was how I talk about Las Vegas. He loved his city and was excited to tell us about all of the hidden sides to it that we weren't aware of.

He took us to Pequod's pizza. I love pizza, but am generally not a huge deep dish fan. Pequod's was amazing. I had never had deep dish that good before, and I literally thought about the pizza about five times a week for the next six months.

After talking about this pizza for half a year, my wife and I finally found some time to go to the city together on a one day layover before another trip. We uber'd to Pequod's (it was good, but not quite as good as I remembered), walked around the city and went to an amazing pinball arcade.

Chicago is a strange city. It's the third biggest city in the US and no one I know has ever mentioned it. Everyone talks about SF, LA, New York, Miami, Austin, etc... but none of my friends ever seem to go to Chicago. And yet... I think it's a lot nicer than those cities. The river runs through downtown, with bridges every block or so. The skyline is incredible. The food is great. It's in an interesting geographic location, not that far from the east or west coast, with great flights to Europe and Asia.

And... the real estate is absurdly cheap. If there's one thing I can't resist, it's real estate that is underpriced. I wasn't sure if I'd actually buy a place there, but either way my wife and I wanted to spend more time so we booked a week-long trip and contacted a real estate agent.

We had a great week in Chicago. The Art Institute is one of the best museums I've been to, and the only one that elicited an audible "oh my god", by both me and my friend as we walked into the Monet room. Qiao Lin was the best hotpot I've ever had (and I spend a lot of time in China), and Au Cheval is perhaps tied for best burger. We saw the Chicago Symphony Orchestra at Ravinia Festival, which is an amazing outdoor symphony hall. The architecture was, to me, more interesting than that of any other US city, especially when seen from the river on an architectural tour. I even met up with a reader (hi Noah!) at Living Water, a surprisingly good tea house that appears to be a boba place when you look it up online.

All of our condo showings were at the end of the week. The night before I started doing the math on it and realized that

it doesn't actually make sense to buy a place there. The taxes and HOA fees are so high that financially it makes a lot more sense to go visit several times a year and stay in a nice hotel. I didn't want to cancel the showings, but I went into them thinking, "Too bad... I wish the numbers made more sense so that I could actually buy a place in good conscience." My wife was campaigning for just staying in hotels and said if I wanted to buy an apartment I could do it by myself.

The first three units were okay. If I were actually moving to Chicago I'd be happy in any of them, but in each case I had to admit that staying at a hotel would probably be just as good, if not better. The fourth was better and I felt like maybe I could convince myself it would be better than a hotel, but I knew I was stretching.

The last was a wildcard. The images online made it look terrible, but the location was amazing and so was the price. As soon as we walked in, we saw something that you couldn't see from the listing— the view. My wife, previously quite uninterested in buying, turned to me and said, "I think we should buy this one together". I went out on the balcony and realized there was no way I could avoid buying the condo. It was just too good, and with the view it was much better than any hotel room we could get.

As we returned the keys to the front desk I took a glance at the visitor log. Other units for sale in the building had maybe one visitor, but this one had five. We put in an offer immediately, and were told that there was a competing offer. In my estimation the unit was actually worth about 20-25% more than the list price, so I was worried that we were about to get into a bidding war. I don't quite know how he pulled it off, but our realtor managed to get it for us for under asking. I looked up historic prices in the building and couldn't find a single one of this size that went for this price.

The next day I went to do the inspection myself. At first glance many of the systems like the fridge and AC seemed to be broken, but it turned out that they actually all worked fine. I was totally prepared for a major renovation, but it turned out it only needed cosmetic fixes. It was being sold by a trustee of an estate, who I believe never had it inspected or even cleaned, so my theory is that the seller and any other buyer assumed it was much worse than it was.

We closed a few days ago and in a couple days I'll go to the condo for the first time and start getting to work.

The best part of having properties all around the world is getting to know places in a much deeper way than I could if I just visited. I went to the island twice in the past month and was reflecting on what a unique privilege it is to get to know the community there. When we arrived our neighbors gave us a basket of homemade baked goods and vegetables from their garden. When we went to dinner the waitresses remembered my name and asked what projects we were doing this trip. The lady at the hardware store told me about her trip to Vegas because she knows I live there.

JUNKYARD PRINCESS

Kirkus Reviews

“Four acres, steel fence, two warehouses, three forklifts, one-thousand cars, and a junkyard dog”; for the temperamental, uneducated Harry Saunders, his new wrecking yard in the desert was an empire to command. His 9-year-old daughter, Robyn, wrenched from suburban life in Laguna Beach, California, warmed up to it more slowly. She began working the junkyard counter as a tween, operating phone lines and locating parts despite knowing little about cars. Robyn was befriended by a rough posse of men, and Harry even let her drive a forklift once. But her little brother, Ryan, failed to thrive—he was savaged by the resident pack of guard dogs as a small child and later bonded with the ever-present tweekers selling scrap metal for meth funds. When the teenage Robyn salvaged a battered but stylish 1983 Honda Civic, her world opened.

She listened to cool music on the radio and visited the ocean instead of attending school; away from the junkyard’s chaotic orbit, she explored a more creative path. But as the business lost money, her father became increasingly aggrieved, Ryan veered off course, and Robyn discovered that she could never fully escape her past. Saunders Wilson’s “memoirella” is brief, but even when lightly touching on subjects like familial sexual abuse and drug addiction, her story has impact. The author’s examination of her family and community grants grace and understanding to all. At restau-

rants, Harry harassed wait-staff, and the wrong word could cause him to flip over the dinner table at home—but his savagery obscured the early wound of abandonment.

Ryan is a nemesis but also a confidant, wilding out with Robyn through the night and eating biscuits and gravy with her at dawn. The setting plays a pivotal role: Robyn left a safe “walled fortress” for a land of “misshapen” houses where the sky loses its “coastal blue tint,” and nature—in the form of the Pacific Ocean and Cal State San Bernardino’s forests—helped enable Robyn’s eventual escape.

A-MAZE-ING AIRPORT ADVENTURE

Kirkus Reviews

Munro, who knows her way around a maze, here fits a series of them into a simple storyline about a child who’s taking a trip to visit Grandmother, accompanied by Mom and Dad. Written in second person addressed to readers, the book starts at Sunnyside Airport, and from there, we move—never in a straight line!—through departures, check-in, security, airport shops and the food court, and terminals into a wonderfully roomy plane interior. At last, it’s time to take off: “UP, UP, AND AWAY!” Large, intricate, full-color spreads are rendered in Munro’s familiar style, not drawn with super-sharp outlines but nevertheless perfectly clear.

In addition to the winding mazes, each double-page spread includes a challenging list of items to find, including (on each spread) “a copy of this book.” Direct instructions (“After Security, you enter the FOOD COURT and SHOPS. First get a cold drink”) guides readers through the mazes; an answer key keeps frustration at bay while providing useful and reassuring flying facts. The people depicted are diverse in terms of skin tone and ability; the protagonist never appears (the artwork is depicted from the youngster’s perspective). Whether preparing for a trip or whiling away hours on a flight, readers will find this book absorbing and informative.

What Do Social Media Companies Fear? Time Management.

Study Hacks · Study Hacks (Cal Newport)

I recently came across an interesting academic article in the journal *Frontiers in Psychology*. It was titled, “The relationships between social media use, time management, and decision-making styles.”

The paper’s author surveyed 612 university students and young adults, asking them, among other things, about their digital habits and levels of personal organization. Using a linear regression analysis, she uncovered the following:

“Social media use was negatively and significantly associated with overall time management and all its subscales.”

Here’s the standard interpretation of this result: Social media is distracting, and if you’re distracted, it becomes harder to maintain control over your schedule. So, the more you use social media, the worse you become at time management.

But I’ve become interested in the reverse form of this argument: the better your planning system, the less time you’ll spend on engagement-based applications like social media.

Here’s my thinking...

When you’re following an intentional schedule, your efforts are oriented toward goals that you find important. You also feel a satisfying sense of self-efficacy. These realities engage your long-term reward system, which can over-

ride the urges generated by its short-term counterpart, dissipating the drive for quick gratification from activities like glancing at your phone.

In other words: The more you organize your analog life, the less appealing you’ll find the digital alternative.

If this is true, then maybe the thing social media companies fear most is not some newly-powerful application-blocking software or impossibly strict regulation, but rather a good old-fashioned daily planner.

In Other News :

A lot of people I know have been freaked out recently by a viral essay with a grandiose title: “Something Big is Happening.” I recently released a short video in which I conduct a close analysis of this piece. (Spoiler alert: I wasn’t impressed.) Check it out.

(More generally, I’ve been considering starting a separate weekly podcast/newsletter dedicated to providing a reality check on recent AI news. It feels like it might be useful to separate this discussion from my existing podcast and newsletter, which are more focused on how individuals can seek depth in a distracted world. But also, maybe this is a bad idea? I’m interested to hear your thoughts about this plan.)

The post [What Do Social Media Companies Fear? Time Management.](#) appeared first on [Cal Newport](#).

WHERE I GREW

Kirkus Reviews

On the title page a pale-skinned adult clothed in colorful garb stands among a grayscale forest. As the main text starts, the adult—now aged but wearing a similar outfit—walks with a youngster, apparently a grandchild. Observing and enjoying the vibrant, lush natural world around them, the narrator reflects on the different places the family has hailed from and paths they’ve taken “in search of the perfect place / To put down our roots / And call home.” Over a few page turns, the child (revealed to be the book’s narrator) has grown to adulthood and, donning the elder’s satchel, explores the forest with the next generation. “I grew here. / This is my community.” As the narrator’s children (who present East Asian, like the narrator) swing among the trees and explore the forest, our narrator considers the past, present, and future.

With spare but lyrical text, Awan’s story celebrates a forest’s transformation and that of a family over generations. Jomepour Bell’s careful illustrations reveal the passage of time: what has changed (a single fox seen earlier eventually is depicted with two kits, a butterfly emerges from its chrysalis) and what remains: home and the vibrancy of the forest. The bright visual details reinforce the themes of belonging and time and reward attentive reading.

In other words: The more you organize your analog life, the less appealing you'll find the digital alternative.

Study Hacks

WHO NEEDS FRIENDS

Kirkus Reviews

Actor-turned-author McCarthy, now in his 60s, begins with a comment from a young son who says, offhandedly, “You don’t really have any friends, do you, Dad?” McCarthy thinks, well, he has friends, but he doesn’t see them often. The resolve, then, that drives this narrative was to go seek out friends from his hell-raising, bibulous youth and beyond, driving up and down and across the continent to check in. One visit was to a man he called his “surrogate big brother,” who had fallen on hard times, psychically speaking; though that old friend waved him off, McCarthy drove the many miles to see him all the same, to find him living as a hoarder with boxes everywhere that explained, McCarthy gamely writes, “how Jeff Bezos became a billionaire.” A modest intervention ensues before McCarthy pushes on.

Friends can be as numerous as one wishes, but they require investment: McCarthy cites a study that conjectures that “it takes two hundred hours to make a good friend.” Making is one thing, keeping quite another: He marvels at an encounter in a Texas diner with a group of women who meet for lunch every Wednesday and have for time immemorial, which causes him to wonder, “Why are women just so much better at this?” The answers are various. McCarthy notes, near the end of his narrative, that while he’s met many men who have had friends for decades, he has also met “men who have no male friends at all, who can’t

even conceive of the idea.” McCarthy finds hope for those friendless men when he concludes that those with whom he’s spoken allow that they’d “just never talked about this before” and might ponder doing something about

it.

THE HEART WORK OF MODERN LEADERSHIP

Kirkus Reviews

“The work of leadership isn’t just about building organizations,” writes Grossman; “it’s about building people who then create something extraordinary together.” Drawing on the “collective wisdom” of his clients and colleagues in the business sector, as well as data amassed by the Harris Poll on behalf of his consulting agency, the author argues that the most effective modern leaders balance “emotional intelligence with analytical thinking.” In other words, they combine an empathetic, encouraging approach with strategic thinking focused on efficiency. While the book’s ample selection of anecdotes from CEOs across numerous businesses lend a personal touch to the work, what stands out most is the poll data taken from more than 2,000 employees.

This research indicates the persistence of antiquated “command-and-control” leadership styles, with only one-third of employees willing to call their organization’s leadership “exceptional.” Grossman convincingly uses the Harris Poll data to identify six traits characteristic of exceptional leaders and devotes an entire chapter to each, including leading with gratitude, fostering an inclusive culture, and “communicat[ing] with context.” (The author reports that leaders designated exceptional by their employees were more than seven times more effective at “adjusting their communication to meet employee needs.”) Grossman conveys

his research-backed claims in an enthusiastic writing style that makes for an absorbing read rich with real-world examples and commentary from the author’s corporate cohorts.

The book boasts a wealth of visual elements, such as colorful fonts and high-resolution, full-color illustrations, diagrams, and photographs; occasionally, the work feels like a stimulating collection of streamlined infographics. It also reads at times like an extended advertisement for the author’s consulting agency, the Grossman Group, since the text is full of trademarked phrases, references to the author’s other books, and QR codes linked to additional products and services.

BENEATH

Kirkus Reviews

For six years Sasha has lived in Haven, the underground society built to withstand nuclear war. Since the war, since her family's deaths, since discovering she doesn't get sick like everyone else does, Sasha's life has been full of death and overfull with grief. While working in the Ward, Haven's limited hospital, she stays with patients as they die. When Tristian Hayes, a unit commander of the Force, ends up as her patient, hanging on for his life, she pleads for him to stay alive. He does—upending her bleak ritual as Death's Angel. Hoping to forget everything she's seen and to numb the pain, Sasha leaves the Ward in favor of a role with a pickaxe, expanding Haven's tunnels. Tristian, fiercely determined and stunningly stubborn, recruits Sasha to the Force for a vital mission aboveground.

The story picks up steam with Sasha's intense training to become the medic for Tristian's tightknit unit. Together, they bear the weight of their unit's survival and all that's left of humankind. While in training, Sasha struggles to discern friends and enemies, but nothing is as challenging as facing her own demons. In this prequel to her debut novel, *Conform* (2025), Sullivan tries to accomplish a lot with both the worldbuilding and plot machinations, resulting in a convoluted story and flattened characters. The plot doesn't have a satisfying payoff, but the romantic tension between Sasha and Tristian will keep readers engaged.

ON THE RECORD

Kirkus Reviews

It's typically American, Johns Hopkins musicologist Celenza notes, that rebelling colonials adopted the derisive British song "Yankee Doodle" as a badge of pride. But a true anthem was wanted, and it came in the War of 1812 (which "we tend to forget...began as an act of US aggression"): the "Star-Spangled Banner," written by a lawyer (and slaveholder in the "land of the free") who borrowed the barely singable tune from a British men's club. It might have been a handier ditty, such as "My Country 'Tis of Thee" (its tune borrowed from "God Save the King") or "Hail, Columbia," but alas, no. Not long after emancipation, the formerly enslaved and their descendants found an anthem of their own in "Lift Every Voice and Sing," with its resonant cadences ("Lift every voice and sing / Till earth and heaven ring, / Ring with the harmonies of

Liberty..."), a song that deserves wider circulation outside the African American church community. Other songs in Celenza's roster speak to other aspirations of freedom: George Gershwin's "Rhapsody in Blue," which "captured the mechanistic beat of modern life"; the collected works of Duke Ellington, blending jazz with the European classical tradition; Abel Meeropol's antilynching ballad "Strange Fruit" as sung by the great Billie Holiday, who ended her set with it and left the stage immediately after, leaving her audiences stunned by the force of her delivery; Jerome Robbins' musical *West Side Story*, origi-

nally meant to tell the story of immigrant Eastern European Jews in New York and seized upon by politicians to denounce juvenile delinquency; and of course that great delinquent Bob Dylan, whose folk anthem "Blowin' in the Wind,"

Celenza wryly notes, offers "an answer that is equally evasive and profound," like the author himself. Celenza's selections, extending into the era of Hamilton, aren't unexpected, but she has something fresh to say about all of them.

[Outliers] The Multidisciplinary Approach to Thinking | Peter D. Kaufman

Vicky · Farnam Street (fs.blog)

One of the people I've learned the most from is Peter D. Kaufman.

Peter has been the chairman and CEO of GlenAir since 1977. And he's got a track record that puts him in the top 0.001% of business leaders during that time. He's also the editor of Poor Charlie's Almanack and was one of Charlie Munger's closest friends for decades.

In a talk never meant to be made public, he revealed the secrets of multidisciplinary thinking. Someone unfortunately recorded the talk without his permission. It became hugely popular, and eventually Peter allowed the complete talk to be transcribed and posted on FS.

It's time to listen and learn.

THE HEART OF OUR HOME

Kirkus Reviews

The table is where this loving Black family enjoys the first meal of the day; it's where the children do homework and make cookies and where everyone prepares for fish fry Fridays. Extended family shares space here during somber moments, such as deaths, and on happier occasions, including birthdays, Kwanzaa, and other holidays. Grandpa regales the young protagonist (who narrates) with stories of Mom and Dad's past as the child listens intently. And when it's time for Mom to braid the youngster's hair, this, too, happens at the table. "The process is exhausting for both of us, and I sometimes struggle to sit still," but "when she is finished, I feel so pretty—and thankful that it's done." In her authorial debut, Washington relies on the cut-paper collage technique that won her a Caldecott Honor for *Choosing Brave* (2022), written by Angela

Joy. Her images boast bright colors, rich textures (the grain of the wooden table is particularly eye-catching), and a level of detail so intricate, it's hard to believe the artist relied on cut paper alone. Her straightforward prose often ripples across the page, conveying warmth and visual verve. Photos of Washington's own family table close out the work.

Joe Liemandt: Alpha School and the Future of Education

Vicky · Farnam Street (fs.blog)

Joe Liemandt is the principal of Alpha School and the founder of Trilogy Software and ESW Capital.

Liemandt dropped out of Stanford to build Trilogy, made the cover of *Forbes* twice before thirty, became the youngest member of the *Forbes* 400, then vanished from public life for twenty-five years. But he didn't stop building. Through ESW Capital, he quietly became one of the most prolific acquirers of software businesses in the world.

Now he's back with a \$1 billion bet that AI can make kids learn ten times faster, and that school as we know it isn't just inefficient, it's broken.

Public Release: March 31. Members have access now. Join us.

Coming Soon: YouTube | Spotify | Apple Podcasts | Transcript

At Alpha School, students spend two hours a day on AI-driven instruction and score in the top 1% on standardized tests. The rest of the day is devoted to what Liemandt calls life skills: leadership, entrepreneurship, teamwork, and real projects that kids actually care about.

There are no lectures, and kids don't move forward until they master the material.

He argues the traditional classroom was designed for a narrow slice of students and wastes everyone else's

time. The fix isn't more money or better teachers; it's rebuilding from scratch around mastery, motivation, and AI.

This conversation covers his full arc from sleeping on the floor at Trilogy to being mentored by Jack Welch, to deciding that "kids must love school more than vacation" was a non-negotiable design principle.

He explains how Timeback works under the hood, why he's comfortable streaming student screens to AI in real time, and how he plans to scale it for a billion kids.

I hope you enjoy this conversation as much as I did.

This Quiet Missionary Survived the Lincoln County War to Live Among the Zunis

Gregory Lalire · HistoryNet

The Rev. Dr. Taylor Filmore Ealy faced many struggles, most not of his own making, while a Presbyterian medical missionary between 1874 and 1881—first at Fort Arbuckle, on the Chickasaw Reservation in Oklahoma Territory; then in volatile Lincoln, New Mexico Territory; and finally at Zuni Pueblo, also in New Mexico Territory. Some of that time he kept a journal. Daughter Ruth drew on his journal entries, as well as the recollections and correspondence of her father and mother, Mary, to write *Water in a Thirsty Land*—first privately issued in 1955 in a limited edition of 40 copies.

Editor David Thomas resurrects the Ealy chronicle as Vol. 10 of Doc45's Mesilla Valley History series. In his excellent introduction Thomas provides not only overviews of the three Western locales where the Ealys lived, but also brief biographies of the major figures in Ruth's narrative. Perhaps of greatest interest is the time the Ealys spent in Lincoln, as the family arrived on the day murdered English rancher John Tunstall's body was brought into town. It was the latter's murder that triggered the 1878 Lincoln County War, and it was the Rev. Dr. Ealy who delivered Tunstall's funeral oration at the home of Alexander McSween. Forty-one days later the doctor and family witnessed the killing of Lincoln County Sheriff William Brady and Deputy George Hindman, and the Ealys were also present for the five-day shootout in Lincoln that

culminated with the burning of the McSween house and Alexander's murder. In his journal Ealy noted that Colonel Nathan Dudley, the commander at Fort Stanton, "refused to protect McSween and ordered his men not to fire over Dudley's camp, or he would turn the cannon on them. My wife read his note to reply to McSween's request for protection. McSween's house, where his party had taken refuge, was deliberately set on fire."

Such violence is what ultimately drove the family out of Lincoln. The Rev. Dr. Ealy then spent nearly three years as a missionary teacher at Zuni Pueblo, 150 miles west of Albuquerque. There was no gunplay there, but Ealy experienced plenty of cultural shock. "He had gained the respect of many of the Indians who more and more were beginning to realize the value of an education," wrote Ruth (who was born in East Waterford, Pa., in 1877 and died in St. Petersburg, Fla., in 1959). "The religious dances still interfered with the school attendance, it is true, but the children seemed to be enjoying their schoolwork. He had learned to like his Indian friends." It was—and remains—mighty dry country, and Ealy often noted in his journal how the Zunis danced day and night for rain.

Be Your Best in 2026: The Most Important Lessons from The Knowledge Project (2025)

Vicky · Farnam Street (fs.blog)

The Knowledge Project closes 2025 with a look back at the most meaningful conversations of the year. Featuring insights from some of our most impactful episodes, this collection brings together practical insights on decision-making, leadership, preparation, relationships, trust, and performance.

Featured clips

01:32

Alfred Lin: Inputs vs Outputs – Daily Routines and Priorities

08:05

Bret Taylor: Founder Mode (Accountability vs. Caricature)

21:58

Logan Ury: Navigating Relationships and Attachments

29:04

Bill Belichick: Preparation and Success In Life And The NFL

38:33

Indra Nooyi: Delivering a Message That Gets Heard

43:36

Anthony Scilipoti: Don't Rely on AI, You Still Have to Put the Work In

52:11

Lulu Cheng Meservey: Engineering Trust and Building Confidence That Others Can Believe In

57:53

Harley Finkelstein: Overcoming Failure + The Hard Work Behind the Life You Want

01:05:15

Jim Murphy: Performance Habits of Successful People

This episode features insights from world-class investor Alfred Lin , tech founder and operator Bret Taylor , behavioral scientist Logan Ury , legendary NFL coach Bill Belichick , former PepsiCo CEO Indra Nooyi , disciplined value investor Anthony Scilipoti , trust and communication expert Lulu Cheng Meservey , Shopify President Harley Finkelstein , and performance coach Jim Murphy .

These are the insights that help you prepare better, make clearer decisions, and build momentum for the year ahead.

Thank you for listening and being part of The Knowledge Project this year.

PEN PALS

Kirkus Reviews

Having established in the opener that being “Poetry Pals” is far better than being predator and prey, Coelophysis and Frog set off to see the world and learn to write about it. They start by alternating spontaneous rhyming lines, advance to two-word poems that they dub “Blue Poos,” and finish up with “sound poems” created with a chorus of hooting, honking Parasaurolophus. Along the way, a supposedly bad—but really funny—poem (“How does a T-Rex pick his nose? / Arms too short, so he uses his toes!”) leads to a frantic flight from its irate subject, while an Archeopteryx named Hope drops in and out of view to fuel bits of wordplay and a wistful concrete poem from smitten Coelophysis: “I hope / to see / Hope / soon / and / hopefully / Hope / hopes / what I / hope.” Like the poems, the illustrations seem both simple and unpolished at first

and, OK, second glances. But the hand-lettered verses and the googly-eyed dinos, both of which Angleberger places on layered swatches of creased and deckle-edged paper for a 3-D look, carry more than enough vim to leave budding poets roaring to join this brand-new writer’s group in its collective closing “ALL RIGHT!!!! Let’s WRITE!!!”

These are the insights that help you prepare better, make clearer decisions, and build momentum for the year ahead.
