COVER STORY

AK Monthly Recap: January 2026

A new year is upon us. After my very busy December, I didn't leave the city of Prague once in the month of January.

Adventurous Kate

And it was excellent.

Also this month, Adventurous Kate turned sixteen years old. WOW.

Let's take a look at the best of January 2026!

Prague, Czech Republic

Prague during its least touristy time of year.

Before I get into the usual recap, I want you to help me raise money for immigrants in the United States who are being terrorized by ICE.

I'm giving away four 45-minute consult calls to people who make donations to organizations fighting ICE: specifically, legal aid and mutual aid organizations helping immigrants.

I charge a lot for these and NEVER give them away, but this seemed like a very good reason to do so.

You can choose between the following:

Travel consult, where I help you plan a trip

Blog consult, where I help you with your blog

Social media consult, where I help you with your social media

Or just a call where we talk about anything (within reason)

I chose organizations that help immigrants with legal support and mutual aid in Minnesota, in Maine, and nationwide.

Here are the five places where you can donate:

Immigrant Law Center of Minnesota <https://www.ilcm.org/donate/>

CoPal Minnesota <https://copalmn.org/donate/>

Immigrant Legal Advocacy Project Maine <https://ilapmaine.org>

Maine Solidarity Fund <https://www.mainesolidarity.org>

National Immigrant Justice Center <https://immigrantjustice.org/ways-to-help/>

You will get one entry for every \$5.00 you donate — so feel free to donate \$20, \$50, or even more!

Forward the receipt to [care \[at\] adventurouskate.com](mailto:care@adventurousskate.com) by February 13, 2026.

I will draw four random winners and follow up by email.

THANK YOU for making a big difference. So far we have raised several hundred dollars for these organizations! Let's keep it up!!

Raye was amazing in concert!

I'll be honest — this was a very quiet month. I did not do much, and that was very much by design. We all need time to winter properly.

Seeing Raye in concert. I've been a fan of Raye ever since she appeared on SNL two years ago, and I had to snap up tickets when she came to Prague.

She put on a beautiful concert that was both a throwback and something super modern. I loved how she had a giant

big band on stage, how she wore a red sparkly dress for most of the concert, and how she went from big band to stripped down songs sitting behind the piano (she called it the “musical therapy section”) to a big dance party at the end!

Cooking lots of tasty things. Winter is the time of year I cook a lot, and this has been a good month for sauces, soups, and other hearty dishes!

Marcella Hazan’s bolognese , which takes at least four hours to cook, was so good, I made two double portions this month. It’s also great reheated with some nduja stirred in!

Lewis! How did you get in that bag??

Nothing much, but it was SO, SO COLD THIS MONTH! It snowed quite decently, but beyond that, we’ve had temperatures below freezing almost every day, which makes it the coldest winter since I’ve been living in Prague.

I love the diversity of the songs on this album, but how it all has a very strong point of view throughout.

Adventurous Kate

Every day, I take a 45-minute walk — but with temperatures like these, I’ve been gritting my teeth through the whole ordeal.

Murray in his happy place...any cardboard box.

What’s it like to travel to Curaçao? — Everything you should know before traveling to Curaçao, and why it quickly became one of my favorite Caribbean islands!

It was actually this post about why I talk about politics as a travel blogger — and exactly where I stand on many issues.

I talk about politics frequently, on all platforms, but I know that not everyone sees all my content due to algorithms and whatnot. This is a chance to be crystal clear about my values.

I have been working my way through Better Call Saul this month. And yes, I know I’m MANY years late on that. It’s weird that I never watched, as Breaking Bad is my favorite TV drama of all time. But after getting into Pluribus , I decided to dive deep into the live of Saul Goodman.

And what a surprise — it is SO good, so deep, and full of what made Breaking Bad so good. If you’ve never watched it, I highly recommend it. But make sure you watch Breaking Bad first. It’s more rewarding to see the Easter eggs and thematic parallels of Better Call Saul .

Also, The Pitt is back! Brilliant, brilliant show. I’ll probably talk about that more next month.

Movies-wise, I really enjoyed Bugonia this month. Dark, funny, brilliantly acted, and a lot of fun. It’s on Peacock if you want to stream it.

I ’m listening to all 500 of Rolling Stone ’s 500 Greatest Albums of All Time , which I am enjoying immensely. I am loving discovering new artists and listening to albums I’ve somehow missed my entire life until now!

And I’ve noticed a change lately. As I get below number 150, the albums are having a huge uptick in quality. They’re some of the best. This is also the month with the most albums I had listened to in full.

In January, I listened to albums number 162-136.

Favorite Discovery: Grace by Jeff Buckley. All I knew about him was that his version of “Hallelujah” is known for being far better than Leonard Cohen’s original, that he died young, and that people who love him really, really love him.

Then I listened to his album, and I was absolutely spell-bound. His beautiful voice, his deep songwriting, and the perfect 90s alternative sound (in a good way). Just magnificent, start to finish.

I’ve listened to the album several times and I think it will be going into my rotation regularly.

Jeff Buckley died by accidental drowning at age 30. He will forever be a one-album artist. What a loss for the world.

Favorite Revisited Album: Channel Orange by Frank Ocean. This has long been one of my favorite albums of all time, and I’ve listened to it consistently since it came out. I love the diversity of the songs on this album, but how it all has a very strong point of view throughout.

In the decade-plus since it came out, I’ve come to realize just what a big impact this album had on alternative R&B (it’s up there with Kanye’s 808s & Heartbreak in terms of influencing genres).

Not to mention how revolutionary it was at the time for a hip-hop artist to be openly queer and sing about it.

(Also, Frank...if you ever wanted to make more music, that would be great!)

Favorite Songs: SO MANY THIS MONTH!! “Forget Her” by Jeff Buckley, “The Wonton Song” by Led Zeppelin, “Kiss Me On My Neck” by Erykah Badu, “Hand to Mouth” by George Michael, “Encore” by Jay-Z, “Guinnevere” by Crosby, Stills & Nash, “Stan” by Eminem, “Sweet Life” by Frank Ocean, “King of Pain” by The Police, “Into the Groove” by Madonna, “Cast No Shadow” by Oasis, “Turning Tables” by Adele, “Atlantic City” by Bruce Springsteen.

Get the playlist: I’m creating a playlist of my favorite songs from the 500 albums — maximum one per album — on Spotify. You can listen to it [here](#).

Random Music Thoughts: Just like The Slim Shady LP , I hadn't listened to The Marshall Mathers LP in decades, and yet when I put it on, I remembered every word.

I find it interesting when I have starkly different opinions on different artists' albums. That been the case for Tom Petty (love Full Moon Fever much more than his others) and Big Star (love #1 Record much more than their others).

This month it was PJ Harvey, whose album Rid of Me didn't do anything for me, compared to Stories from the City, Stories from the Sea , which I ADORED. Conversely, this month I enjoyed Blondie's Parallel Lines significantly more than their self-titled Blondie , which I found to be an incredibly annoying album.

This month we also got a new console table for our living room!

I started the year off strong with six books read. I've decided to stop recapping every book in depth in the monthly recap (mostly because I just DREAD writing them all), but I'll include a sentence at least.

The Seven Moons of Maali Almeida by Shehan Karunatilaka (2022) — During the Sri Lankan civil war in the 1980s, a photojournalist is murdered and ascends to the in-between. He has seven nights to find out how he died and get his world-changing photos into his friends' hands.

This book reminded me so much of George Saunders's Lincoln in the Bardo (one of my favorites the year it came out), which is also about the place where spirits dwell between life and death, and has a similarly chaotic atmosphere among the spirits. Turns out that Karunatilaka lists Lincoln in the Bardo as one of his top inspirations.

This book is different in a lot of ways. It's about living in a politically corrupt atmosphere, becoming detached from reporting on violence constantly, being gay and hiding half in the closet, and creating a found family. A really interesting book, and my first by a Sri Lankan author.

All Fours by Miranda July (2024) — A somewhat famous artist decides to drive across the country from California to New York. Instead, thirty minutes from home, she checks into a hotel and immerses herself in a very different adventure with a younger local man.

This book got a lot of accolades, and I get it. Just make sure you're ready for an incredibly unlikeable protagonist and lots of cringing throughout. Some good books are like that! I thought it was worth it.

We went for a long walk on the snowiest day of the year!

The Paradise Problem by Christina Lauren (2024) — A romance that asks the question of "If we pretend to be married around my rich family for a weekend, I'll receive a \$100 million inheritance, but what if we fall in love for real??" It's

entertaining and moves pretty quickly with a lot of action, though I wasn't a fan of the manic pixie dream girl cliché.

The Let Them Theory by Mel Robbins (2024) — Like many pop psych books, this could have been a blog post. Let people do what they want to do. Stop caring about it and be free. WAY too much filler otherwise.

The Perfectionist's Guide to Losing Control by Katherine Morgan Schafner (2023) — This book started very strong with redefining perfectionism, completely with several different kinds of perfectionism, but unfortunately lost steam soon after.

More snow in February? I hope so!

Um...absolutely nothing is coming up in February. This is going to be another quiet month at home.

Only two things are on the calendar: my friends amusingly signed us all up for a zabíjačka on February 14. A zabíjačka is a pig roast tradition that takes place each winter in the Czech Republic and Slovakia. They butcher a pig, hang it upside down outside, and cook it in a million different ways.

So yeah, nothing says Valentine's Day like pig carcasses dripping blood in parks all over the city!

Other than that, I'm on the waitlist for tickets to see Sombra (he's literally performing a five-minute walk from my apartment!) on February 16. Hopefully those come through.

And that is it. Taking it easy.

style="font-size: 25px;">What are you looking forward to in February? Share away!

FEATURES

The stories that stay: What remains when memory fades

TED Staff · TED Blog

By Brigid Jacoby, with Amanda Lynch

November is National Alzheimer's Awareness Month, a time to pause, reflect and continue the conversation on a disease that touches millions of lives around the world. Alzheimer's isn't just a medical challenge — it's an emotional one that reshapes families, identities and the way we connect with one another.

Every TED Talk begins with a story. Every story begins with a memory. That is the idea at the heart of the TED Memory Project, created in partnership with Eli Lilly and Company. It's a multi-platform, multi-month movement that explores how memory drives innovation and connection while advancing understanding and empathy around Alzheimer's.

In his TED Talk, "Where does your sense of self come from? A scientific look," Anil Ananthaswamy shares: "Take, for instance, the question 'Who am I?' The most likely answer you will get or give to such a question will be in the form of a story. We tell others, and indeed ourselves, stories about who we are. We take our stories to be sacrosanct. We are our stories. But a condition that most of us, sadly, will be familiar with, Alzheimer's disease, tells us something quite different. Alzheimer's begins by affecting short-term memory. Think about what that does to someone's story. In order for our stories to form, to grow, something that just happens to us has to first enter short-term memory and then get incorporated into what is called long-term episodic memory. It has to become an episode in our narrative."

This blog is one way of continuing that work, giving space for voices like Brigid Jacoby's to reflect on how Alzheimer's can alter identity and the stories that shape us. It is a space for reflection, where ideas meet lived experience, and where the threads of resilience, grief, curiosity and hope come into focus.

When Brigid watched Anil's TED Talk, one idea struck her: our sense of self is built on the stories we tell about our past, our families and the choices we have made. Alzheimer's complicates this deeply because it disrupts short-term memory, the very building blocks of those stories. Without being able to record and recall, the narrative of who we are becomes harder to sustain. "That idea resonated with me because I have seen firsthand how Alzheimer's can change a person's sense of self, not by erasing them, but by reshaping how their identity is expressed," Brigid said.

Brigid shares her reflections after the recent passing of her mother, Anne, who lived with early-onset Alzheimer's. Anne passed on October 30th, 2025, early in the morning, surrounded by her three children. She began experiencing symptoms in her late forties, with her first memory complaints documented at 51. At first, it was small things like misplacing her keys, forgetting dates or struggling with her computer. But soon, the disease began interfering with her

work. After more than 20 years in her industry, she lost her job, and even retail shifts became difficult when she couldn't navigate the digital sales system. Brigid's younger sibling even took a job at the same shop just to help keep an eye on her.

Anne was a storyteller. As an Irish American, she carried forward the histories of her grandparents immigrating from Ireland, weaving them into a family tapestry she often shared with her children. Her sense of self was tied to these stories and to the act of passing them down.

"One day, sitting outside with my mom, I asked her to retell a story about my great-grandmother," Brigid recalls. "But this time, I watched panic rise in her eyes as she struggled to understand what I was referencing. The words did not come. Instead, tears did. It was not just memory loss, it was a fracture in identity, the vanishing of a thread she had long held onto as proof of who she was and where she came from."

Over time, Brigid and her siblings learned to meet Anne in a different place, one not rooted in lost stories but in new ways of being together. They leaned into humor, curiosity and wonder. They asked silly questions, marveled with her at the shape of plants and clouds, or let her imagination spin freely without the pressure of accuracy. In those moments, Anne still expressed herself. Not through the precise retelling of family history, but through joy, silliness and awe.

Anil's TED Talk reminded Brigid that even as memory fades, the self is not gone — it is simply altered. As Ananthaswamy explains, "I also believe that altered selves should not be seen as the outcome of deficits, or as the outcome of a lack of attributes considered normal. They are different ways of being, and it is the willingness of some of us to confront the self's constructed nature that is helping make sense of the self for all of us."

That is why Alzheimer's awareness matters to her. She wants people to understand that while the disease changes a person, it does not erase them, a lesson she carries forward after her mother's recent passing. "This awareness gives us tools to show up differently," Brigid said. "To support loved ones as they move into a new version of themselves, rather than turning away in fear or discomfort. My hope is that people can approach those living with Alzheimer's with patience, curiosity and care, seeking to understand what they are experiencing instead of mourning only what has been lost. By doing so, we can honor who they are becoming, not just who they were."

Because behind every statistic is a person like Anne, whose story Brigid now carries forward. And behind every talk is someone like Brigid, reminding us why these conversations must continue.

India Bihar Location Map

landofmaps · Land of Maps

id="articles">

Bihar is a state in northeastern India.

The India Bihar Location Map showcases the geographical location of Bihar within India.

Bihar is known for its rich history, cultural heritage, and contributions to ancient and modern India.

The state is home to various important religious sites and historical landmarks.

Exploring Bihar through the India Bihar Location Map can provide valuable insights into its geographical significance.

Bihar has a long and illustrious history that dates back to ancient times. It has witnessed the rise and fall of several empires and has played a pivotal role in shaping India's cultural and intellectual heritage. The ancient kingdom of Magadha, centered around modern Bihar, was one of the first major Mahajanapadas (republics) in ancient India.

During the Mauryan Empire (322 BCE – 185 BCE), Bihar reached its zenith of political and cultural importance. It was the capital region of the empire under the reign of Emperor Ashoka, who famously embraced Buddhism after the bloody Kalinga War.

Over the centuries, Bihar saw the rule of various dynasties, including the Guptas, Palas, and the Bihar Shahi dynasty. The region has also been a significant center for learning, with the ancient Nalanda University attracting students from all over the world.

In more recent history, Bihar played a crucial role in India's independence movement, with prominent leaders like Mahatma Gandhi, Rajendra Prasad, and Jayaprakash Narayan emerging from the state.

Bihar is home to the famous Bodh Gaya, the place where Gautama Buddha attained enlightenment.

The state is known for its vibrant festivals, including Chhath Puja, which is dedicated to the Sun God.

Bihar is characterized by diverse geographical features, including the fertile Gangetic plains in the north and the Chota Nagpur Plateau in the south.

The Gandhi Setu, also known as the Ganga Bridge, connects Patna (the capital of Bihar) to Hajipur and is one of the longest river bridges in India.

The state is renowned for its Madhubani paintings, a traditional art form that originated in Bihar and showcases intricate patterns and vibrant colors.

Bihar has significant archaeological sites, such as Rajgir, where ancient ruins and Buddhist stupas can be explored.

Relevant Facts about Bihar

Year Event

1950 BCE Magadh kingdom was established, laying the foundation of ancient Bihar.

6th Century BCE Gautama Buddha attained enlightenment at Bodh Gaya in Bihar.

4th Century BCE Nalanda University, one of the world's first residential universities, was founded in Bihar.

3rd Century BCE Ashoka the Great embraced Buddhism after the Kalinga War and erected numerous pillars with his edicts across Bihar.

1540 CE Sher Shah Suri, a prominent ruler, established the Sur Empire with Bihar as its capital.

1947 CE India gained independence from British rule, with Bihar becoming a part of the newly-formed Indian republic.

1. What is the importance of Bihar in Indian history?

Bihar has played a critical role in Indian history, witnessing the rise and fall of ancient empires, hosting renowned centers of learning, and being a catalyst for India's independence movement.

2. Where is Bihar located in India?

Bihar is situated in the eastern part of India, bordering Nepal and various Indian states like Uttar Pradesh and West Bengal.

3. What are the major attractions in Bihar?

Bihar is home to several important attractions, including historic sites like Bodh Gaya, Nalanda University, Rajgir, and religious sites like Mahabodhi Temple and Patna Sahib Gurudwara.

4. Are there any famous festivals celebrated in Bihar?

Yes, Bihar celebrates several vibrant festivals, with Chhath Puja being one of the most notable ones, dedicated to the Sun God.

5. What is unique about Bihar's cultural heritage?

Bihar's cultural heritage is enriched with various art forms like Madhubani painting, Manjusha art, and folk dances like Jat-Jatin and Jhumar.

6. What is the best time to visit Bihar?

The winter season (October to February) is generally considered the best time to visit Bihar, as the weather is pleasant for exploring the historical and natural attractions. Bihar is well-connected by air, rail, and road. The state has several airports, and major cities like Patna have railway

Equity Allocation in Startups

Scott Johnson (fuzzyblog)

Once upon a time, I was speaking with a company founder and they mentioned that they had a VP of Engineering to whom they have given a 1/3 stake in the company. I immediately commented that was too much and then said “I’ll write this down in a blog post” – and then I never did. Last night, oddly, I woke up from a deep sleep with the desire to write this down. And that brings us to this post.

Here’s what I can remember from that conversation:

Company Stage : Pre Funding

Company Type : Medical

Equity Split with the VP of Engineering : 1/3

Founder Title : Yes

Did VP of Engineering Put in Cash : No

id=“you-need-to-understand-this”>You Need to Understand This

One of the basic rules of the startup world is that on Day 1, you, the founder, own 100% of something that is worth absolutely nothing . The goal, by the end, is that you own a much smaller percentage of something actually worth something. As an example, owning 10% of something worth \$10 million is actually much, much better.

id=“the-basic-rules-of-thumb-for-equity-allocations”>The Basic Rules of Thumb for Equity Allocations

Here are my rules of thumb to use for equity allocation:

The more risk you take, the more you get

The earlier you join, the more you get

Putting time in is one type of risk

Putting cash in is a greater type of risk

If you, the founder, give too much equity to someone else then you can be pushed out by simply having that other person align with the investor or investors

You only have 80% of the equity to play with - 20% generally goes to an ESOP (employee stock option plan)

Make damn sure that you give out options not stock and a long vesting schedule (incremental over say 4 years)

The bottom line is that equity, in whatever form, is a reward for taking risk. And the earlier you are involved in a startup, the more risk there is.

id=“my-personal-experience-from-feedster”>My Personal Experience from Feedster

A long, long time ago, I founded a blog search engine named Feedster. I merged with another RSS search engine shortly after coming to market to address some technical limitations in my architecture. We did the typical nerd founder thing and simply split the equity down the middle and both took the Founder title.

In retrospect that wasn’t a fair allocation because I committed significantly more time to Feedster but it avoided a difficult conversation that I was simply not brave enough to have – and that was a mistake.

Once we realized that blog search was actually a viable business, my first hire was a CEO to handle the operations and capital raise. This CEO:

Came in after the technology was built

Came in after the site had traffic

Came in after growth was proven

Did not have to put in any personal money

The equity allocation for that CEO, bear in mind that this was 16 years ago so my memory may be fuzzy was between 9% and 10%. That CEO’s advice to me is that if we filled other VP level slots, we’d be talking about between a 3% to 5% stake.

If you contrast these numbers with the 1/3 equity split mentioned above, it is considerably less and the reason was that an awful lot of the risk had already been addressed (functional technology, working product, site with traffic, no capital investment, etc).

id=“disclaimers”>Disclaimers

There are two important disclaimers to understand here:

I am not a lawyer (IANAL) and my focus is always on making great technology NOT on the best personal economic return. This means that there are aspects of capital raising and equity allocation that I don’t now and likely never will fully understand.

I should also note that equity allocation is a particularly sensitive topic for me because, even though I was the founder, I was forced out by the people I hired and then voted off the board. And while I am over it (somewhat), had the equity allocations been handled differently, that might not have happened.

id=“what-should-this-founder-do”>What Should This Founder Do?

My advice to this founder is to get Marc Randolph’s book, That Will Never Work , about the founding of Netflix and read pages 180 to 189. Marc Randolph was the founder of Netflix and the original CEO. In these pages, Reed Hastings not only told Marc that he needed to step down as CEO and be replaced by Reed but that he needed to give a substantial

id="in-search-of-stupidity-over-20-years-of-high-tech-marketing-disasters">In Search of Stupidity: Over 20 Years of High Tech Marketing Disasters

This is an absolute gem of a book. There is a lot of humor here but the best bits, the parts I underline, start on Page 308 where he outlines positioning for a software product. In an extremely telling bit of analysis, he opens the book by looking at software companies in 1984 and then 2001. Even though there were a number of companies both larger than Microsoft or approximately Microsoft's size, in 2001, the next runner up, Adobe, is 1/20th of Microsoft's size. This he attributes to Microsoft being the only company "that

never made a fatal, stupid mistake". And, yes, Ashton-Tate is part of the 1984 list. A bit dated but it is also timeless. Recommended

standard-article(title: [Assessing the impact of human error factors on railway accident severity: Evidence from accident investigation reports in Korea], author: [Jun Lee], source-name: [PLOS ONE Feed], images: (), paragraphs: ([by Changhun Kim, Jun Lee], [This study investigates

where old empires were buried and new nations reigned supreme. That vision would resonate beyond the borders of the new Turkey, becoming a shining example for leaders around the world of how to build a single unified national identity — no matter the cost.], [To manage podcast ad preferences, review the links below:], [See pcm.adswizz.com for information about our collection and use of personal data for sponsorship and to manage your podcast sponsorship preferences.], [Learn more about sponsor message choices: podcastchoices.com/adchoices], [NPR Privacy Policy],), insert-map: (:), word-count: 137, edited-for-length: false, debug-mode: false,)

standard-article(title: [Chaos], author: [Throughline (NPR)], source-name: [Throughline (NPR)], images: (), paragraphs: ([What happens when teenagers are shipwrecked on a deserted island? Can you find the fingerprint of God in warzones? Why was the concept of zero so revolutionary for humanity? A year into a pandemic that has completely upended the lives of people around the world, we look at how we cope with chaos, how we're primed to make order out of randomness, and why the stories we're taught to believe about our propensities for self-destruction may not actually be true.], [To manage podcast ad preferences, review the links below:], [See pcm.adswizz.com for information about our collection and use of personal data for sponsorship and to manage your podcast sponsorship preferences.], [Learn more about sponsor message choices: podcastchoices.com/adchoices], [NPR Privacy Policy],), insert-map: (:), word-count: 120, edited-for-length: false, debug-mode: false,)

standard-article(title: [Converting from MySQL to Postgres using NMIG], author: [Scott Johnson (fuzzyblog)], source-name: [Scott Johnson (fuzzyblog)], images: (), paragraphs: ([Historically I've been a MySQL advocate but I've recently been quite impressed with Postgres. This leaves me in the

the role of human error factors in shaping the severity of railway accidents. Using a structured coding scheme to transform qualitative accident investigation reports into quantitative variables, the analysis reveals that deficiencies in managerial oversight, shortcomings in maintenance practices, and failures in equipment and system reliability are consistently associated with higher accident costs. These findings underscore the organizational and technical dimensions of human error as critical factors linked to accident severity, rather than merely front line worker mistakes. At the modeling level, the explanatory variables collectively account for a meaningful portion of the variation in accident costs, indicating that such outcomes are not purely random but systematically related to underlying human and organizational conditions. By identifying the relative importance of managerial, maintenance, and equipment-related deficiencies, this study provides empirical evidence for prioritizing these factors in railway safety management. The results highlight the need to strengthen organizational accountability, improve maintenance regimes, and ensure the reliability of technical systems as essential strategies for mitigating high-consequence accidents. These insights contribute to a deeper understanding of the organizational and systemic correlates of accident severity and can inform targeted interventions aimed at enhancing overall railway safety.],), insert-map: (:), word-count: 199, edited-for-length: false, debug-mode: false,)

standard-article(title: [Updating to the Latest Ansible on Ubuntu], author: [Scott Johnson (fuzzyblog)], source-name: [Scott Johnson (fuzzyblog)], images: (), paragraphs: ([One of the tricky bits about Ansible is that new features in the “language” always require the latest version of Ansible itself. And, while logical, this can easily bite you. Here’s an example:], [class=“highlight”> TASK [deploy_hate-language-modeling_systemd_start : just force systemd to re-execute itself (2.8 and above)] *** fatal : [aws_master2]: FAILED! => {“changed” : false , “msg” : “ Unsupported parameters for (systemd) module: daemon_reexec Supported parameters include: daemon_reload, enabled, masked, name, no_block, state, user” } to retry, use : -limit @/home/ubuntu/ansible/playbook_deploy_hate-language-modeling_master.retry], [What that translates to is that Ansible itself doesn’t know how to use the parameter daemon_reexec . And when you’ve been using an Ansible feature successfully and then it doesn’t work on the server, that usually is a rock solid signal “update ansible”]., [Here’s how to do this on Ubuntu:],), insert-map: (:), word-count: 155, edited-for-length: false, debug-mode: false,)

standard-article(title: [Cinco de Mayo and the Rise of Modern Mexico (2022)], author: [Throughline (NPR)], source-name: [Throughline (NPR)], images: (), paragraphs: ([Does history have a border? That is the question at the heart of Cinco de Mayo, May 5th, a holiday that symbolizes Mexico's fight for autonomy, even as it's come to be associated with sales and cervezas and margaritas in the U. S. Cinco de Mayo is part of a much deeper story of two nations — Mexico and the U. S. — trying to define themselves at a time when old empires were crumbling and borders were in flux. A story that culminated in a revolution in Mexico that was at the forefront of a worldwide movement against predatory capitalism and foreign domination. So in this episode, we're going back to the first Cinco de Mayo and exploring how it helped shape the future on both sides of the border.], [To manage podcast ad preferences, review the links below:], [See pcm.adswizz.com for information about our collection and use of personal data for sponsorship and to manage your podcast sponsorship preferences.], [Learn more about sponsor message choices: podcastchoices.com/adchoices], [NPR Privacy Policy],), insert-map: (:), word-count: 169, edited-for-length: false, debug-mode: false,)

standard-article(title: [Abortion Before Roe], author: [Throughline (NPR)], source-name: [Throughline (NPR)], images: (), paragraphs: ([Abortion wasn't always controversial. In fact, in colonial America it would have been considered a fairly common practice: a private decision made by women, and aided mostly by midwives. But in the mid-1800s, a small group of physicians set out to change that. Obstetrics was a new field, and they wanted it to be their domain—meaning, the domain of men and medicine. Led by a zealous young doctor named Horatio Storer, they launched a campaign to make abortion illegal in every state, spreading a potent cloud of moral righteousness and racial panic that one historian later called “the physicians’ crusade.” And so began the century of criminalization.

2015 MacBook Pro 13" so not the best machine by today's standards but still absolutely serviceable as a daily driver for most development chores.], [It occurred to me recently that both my phone and my iPad are actually faster than my laptop so I fired up Zoom on them for a conference all and wow was it better. I was able to code through my team call and participate in the team video chat. While my phone worked perfectly well, it had a tendency to slide a bit leading me to break out my home made phone stand (no pic; since my phone is in it how can I take a pic; ask me personally if you care or want one). My iPad, however, since it has the keyboard case, works fantastically well for this tho.], [I'm also starting to use my iPad as my “chat workstation” allowing me to more easily partition the myriad chat apps that we all seem to use concurrently and focus on development more while still participating in chats without getting list in them.], [Recommended .],), insert-map: (:), word-count: 250, edited-for-length: false, debug-mode: false,)

standard-article(title: [Measuring cerebral glucose metabolism by chemical exchange-sensitive spin-lock (CESL) MRI of 2-deoxy-D-glucose in rodents], author: [Philipp Mergenthaler], source-name: [PLOS ONE Feed], images: (), paragraphs: ([by Philipp Boehm-Sturm, Patrick Schuenke, Marco Foddis, Susanne Mueller, Stefan P. Koch, Daniel J. Beard, Paul Holloway, Amin Mottahedin, Leif Schröder, Alastair M. Buchan, Philipp Mergenthaler], [Magnetic resonance imaging (MRI) of glucose metabolism shows significant potential for identifying disease biomarkers and monitoring therapeutic responses in neurological conditions. Here, we present a protocol utilizing chemical exchange-sensitive spin-lock (CESL) MRI with the glucose analogue 2-deoxy-D-glucose (2DG) in the rat brain. We employed this method to characterize metabolic changes in ischemic tissue in a rat model of stroke. However, the utility of the technique is not limited to stroke and may be adapted to other disease models with minimal modifications. Previous research has demonstrated that CESL MRI is sensitive to various glucose analogs, including regular D-glucose, which is suitable for human application. Consequently, our protocol provides a foundation for a wide range of future applications in both basic and translational research, with potential utility in animal models and, eventually, human studies.],), insert-map: (:), word-count: 158, edited-for-length: false, debug-mode: false,)

standard-article(title: [Polygraphs have major flaws. ANALYSIS

IN BRIEF

Marlowe Starling, Quanta Magazine: The passage of the sun across the sky — dawn, day, dusk, night — drives the clock of life. Some species wake with the sun and sleep with the moon. Others do the opposite, and a few keep odd hours. These naturally driven, 24-hour biological cycles are known as circadian rhythms, and they do more than cue bedtime: They regulate hormones, metabolism, DNA repair, and more. When life falls out of sync...

Scientific American, Scientific American: A major defense against everything space throws at us, Earth's magnetic field may even protect the moon from damaging galactic cosmic rays

Throughline (NPR), Throughline (NPR): In February, President Trump declared a national emergency at the US-Mexico border. Last year, he ordered thousands of National Guard troops to the border. Is this the first time an American president has responded with this level of force? In this week's episode, the history of militarization at the U. S.-Mexico border.

TED Staff, TED Blog: Can't make it to Atlanta for TEDNext? TED Live brings the minute-by-minute excitement from the TED Theater to your home, school or office. Be one of the first to experience talks from visionary speakers like music mogul Jermaine Dupri, ballerina & activist Misty Copeland, neurosurgeon & reporter Sanjay Gupta, financial educator Vivian Tu and so many more.

Get your TED Live pass to stream the unedited talks in real time starting November 9 , or later on with the on-demand archive.

Natalie Wolchover, Quanta Magazine: Fifty-eight years after it first appeared, string theory remains the most popular candidate for the "theory of everything," the unified mathematical framework for all matter and forces in the universe. This is much to the chagrin of its rather vocal critics. "String theory is not dead; it's undead and now walks around like a zombie eating people's brains," the former physicist Sabine Hossenfelder...
